PREFACE

COMPOSITION is presented here as deriving its value and its method from constant and consecutive relation to all other studies, and as needing far less to be recited upon than to be done. The actual writing of the student is at every point presupposed as the first material of analysis; and the gradual expansion of this practice determines the order of treatment. A practical order of expansion according to the student's growth underlies the division into parts and chapters. For instance, Part II as a whole is for students of greater experience; and, in detail, the importance of paragraph emphasis in helping a hearer to follow is first set forth in the paragraph doctrine of Chapter IV, and then re-enforced as applied to public speaking in Chapter VII. On the same principle speaking is developed step by step with writing. Certain sections, of course, are devoted especially to speaking, as certain others are limited to writing; but in general, speaking is developed throughout, from simple topical recitations, through oral reports on listening and on reading, to debate and short occasional speeches. The detailed instruction in the use of the public library is an attempt to enlarge the student's view of the education of facts by showing him how to find them, to compare, choose, group, and gradually to apply them, for himself. Correlation of composition with literature is sought, not in the mere use of the same topics for both, but in the common study of form. Reading is made to react on writing, and

writing on reading, by analysis and imitation. The study of narration, for instance, is first set forth within the compass of the student's own ability to narrate scenes, and then applied to define and heighten his appreciation of literature. The risk on the one hand of vulgarizing literature, the risk on the other hand of letting the practical counsels of literature to those who love it, without hoping to make it, remain vague and unfruitful, are shunned both by specific directions and by the general idea of giving to all study of form, whether in a student's revision of his own work or in his appreciation of a masterpiece, connection and significance for himself. Thus in using books of fact as well as books of literature, in appealing also to observation as well as to study, the plan is to make composition a practical focus of the opportunities of education as they actually arise, and to make it interesting by making it real.

The exercises, though full enough to offer choice and adaptation, are not miscellaneous. Rather they are typical, intended to suggest at each point as many more by indicating a definite direction of practice. The theory of rhetoric being shown as brief and simple for all practical purposes, and students being turned from learning it to applying it in their own affairs, each exercise should claim time proportional to the needs of the particular class. The object of this study is not to cover ground. No ground could be less worth covering as a field of knowledge. The object is singly to develop sureness and effectiveness. The book aims to help each student in that finding of himself and bringing of himself to bear which is really his education. It aims, not merely to make better writers, not at all to make writers in the professional sense, but through writing and speaking to make better thinkers, men and women more sympathetically responsive to their actual world and better able to answer its calls.

The lively comments of Professor Brander Matthews on the proof have obliged, not only me by a singular favor, but the teachers who use this book by many acute suggestions for which it is a privilege to inscribe public thanks.

C. S. B.

YALE COLLEGE, *April*, 1909.

CONTENTS

PART I

CHAPTER I. CLEARNESS AND INTEREST

	PAGE
1. CLEARNESS AND INTEREST MEASURED BY THE AUDIENCE . . .	3
2. CLEARNESS IN SENTENCE-FORM	4
a. In Simple Sentences	4
b. In Complex Sentences	6
c. In Compound Sentences	8
3. CLEARNESS IN PUNCTUATION AND CAPITALS	9
a. Conventional Rules of Punctuation	9
b. Principles of Punctuation	11
c. Conventional Rules for Capitals	14
d. The Principle of Capitals	15
4. CLEARNESS IN LETTER FORMS	16
a. Formal Invitations, etc.	17
b. Informal Letters	19
c. Business Letters	20
5. INTEREST THROUGH ADAPTATION OR CHOOSING TO FIT . . .	25
6. INTEREST THROUGH SPECIFIC DETAILS	32
7. CLEARNESS IN WORDS	36
a. Good Habits in Words	36
(1) Revision of Writing	36
(2) Alertness in Conversation	37
(3) Care in Enunciation	37
b. Good Manners in Words	38
(1) Usage as Recorded in the Dictionary	38
(2) Usage as Reputable, National, Present	41
(3) Slang	41

	PAGE
8. INTEREST IN WORDS	43
a. Homely Words	43
(1) Idioms and Proverbs	44
b. Apt Words	47

CHAPTER II. THE PRINCIPLES OF CLEARNESS: EXPLANATION

1. CLEARNESS STUDIED BEST IN EXPLANATION (EXPOSITION) .	60
2. UNITY	62
a. Limiting the Subject	62
b. Developing the Subject within the Limits	64
(1) By Instances	67
(2) By Contrast	68
(3) By Iteration	69
(4) By Illustration	71
(5) The Habit of Questioning	73
c. Announcing the Subject	76
3. EMPHASIS	80
a. Proportioning the Space	80
b. Iterating at the End	85
4. COHERENCE	86
a. Beginning where the Audience is	87
b. Leading the Audience Step by Step	88
(1) Plan	89
5. PRECISION, THE CHOICE OF WORDS FOR CLEARNESS	90
a. Synonyms	91
(1) Shall and Will	98
(2) The Subjunctive	100
b. Definition	102
6. THE DISTINCTION BETWEEN EXPOSITION AND ARGUMENT	104

CHAPTER III. THE PRINCIPLES OF INTEREST: DESCRIPTION

1. INTEREST STUDIED BEST IN DESCRIPTION	108
2. CLAIMING INTEREST (EMPHASIS)	109
a. Abundance of Details	110
b. Definiteness of Details	114
c. Observation	116

	PAGE
3. FIXING INTEREST (UNITY)	118
<i>a.</i> Characteristic Moment	118
<i>b.</i> Characteristic Details	120
<i>c.</i> Difference between Exposition and Description in the Means to Emphasis and Unity	123
4. HOLDING INTEREST (COHERENCE)	126
<i>a.</i> Choosing Subjects whose Characteristic Details are Motion and Sound	128
<i>b.</i> Choosing Moments of Action	130
<i>c.</i> Beginning to Describe at Once	130
<i>d.</i> Connecting the Details through the Action of One upon Another	131
<i>e.</i> Keeping One Point of View	135
5. REACTION OF INTEREST ON CLEARNESS	136
6. INTEREST THROUGH WORDS OF FEELING	138
<i>a.</i> Interest through Homely Words	139
(1) Native Words and Foreign Words	139
<i>b.</i> Interest through Specific, Concrete Words	146
(1) Figures of Speech	149
(<i>a</i>) Figures of Association	150
(<i>b</i>) Figures of Likeness	150
7. THE DISTINCTION BETWEEN DESCRIPTION AND NARRATION	152

CHAPTER IV. PLANNING FOR CLEARNESS: PARAGRAPHS

1. PARAGRAPHS THE PRINCIPAL MEANS OF COHERENCE IN LONGER EXPOSITIONS AND ARGUMENTS	156
2. THE PARAGRAPH AS A PART	158
<i>a.</i> Division, Grouping under Paragraph Headings	159
3. THE PARAGRAPH AS A STAGE	162
<i>a.</i> Plan, or Outline, the Order of Paragraphs	163
(1) The Paragraph Subject a Complete Sentence	164
(2) Outline by Paragraphs for Analysis	165
(3) Outline by Paragraphs for Practice	168
4. THE PARAGRAPH ADJUSTED TO ITS PLACE	172
<i>a.</i> Coherence of the Whole Secured by Paragraph Em- phasis	172
<i>b.</i> Coherence of the Whole Confirmed by Words of Tran- sition	181

CHAPTER V. REVISING FOR CLEARNESS: SENTENCES

	PAGE
✓1. SENTENCES STUDIED BEST IN REVISION	184
2. MAKING IMPROPER COMPOUND SENTENCES COMPLEX	185
3. PUTTING THE RIGHT WORD AT THE END	186
<i>a.</i> Ending with the Most Important Word of the Sentence	187
(1) Emphasis Defeated by Redundancy	188
<i>b.</i> Ending with the Most Important Word for the Paragraph	191
(1) Other Means of Adjusting the Sentence to the Para- graph	194
<i>c.</i> Sentence-forms Generally Emphatic	197
(1) Balanced Sentences	197

CHAPTER VIII. INTEREST BY PLANNING: THE STRUCTURE OF NARRATIVE

1. STORY-TELLING AS UNIVERSAL	328
2. STORY-TELLING AS CONCRETE	329
<i>a.</i> Concrete Revelation of Character	334
3. STORY-TELLING AS STORY-PLANNING	340
<i>a.</i> Plan not by Paragraphs	340
<i>b.</i> Plan not Strict in Older Long Stories	341
4. UNITY IN STORY-TELLING: FIXING INTEREST	342
<i>a.</i> Unity as Omission	342
(1) Omission <i>vs.</i> Summary	345
(2) Omission as Limiting the Time and Place	346
<i>b.</i> Unity as Selection	348
(1) Unity of Thought, as in Fables, Parables, and Anecdotes, Exceptional	351
(2) Unity of Feeling Proper to Narrative	353
<i>c.</i> Unity as the Dominance of One Character	354
5. COHERENCE IN STORY-TELLING: HOLDING INTEREST	355
<i>a.</i> Coherence as Leading Up to the End	355
{(1) Climax and Suspense	355
(<i>a.</i>) Newspaper Way and Magazine Way	355
(2) Complication and Solution	360
<i>b.</i> Coherence as Moving Steadily and Rapidly	361

	PAGE
(1) Weaving In	361
(2) The Narrator	362
6. EMPHASIS IN STORY-TELLING: SATISFYING INTEREST	363

CHAPTER IX. STYLE

1. THE SUGGESTIVENESS OF WORDS	364
a. Precision	364
b. Concreteness	365
c. Aptness	367
(1) The Personal Quality	373
2. THE SOUND OF SENTENCES	376
a. The Sound of Verse	378
(1) Rime	379
(2) Rhythm and Meter	380
(3) Adaptation of Verse-form to Feeling	383
b. The Sound of Prose	385
(1) Rapidity	389
(2) Variety	393

CHAPTER X. THE FORMS OF COMPOSITION IN LITERATURE

1. THE TWO FIELDS OF COMPOSITION	399
2. THE PRIMARY FORMS OF COMPOSITION IN LITERATURE . .	401
a. Epic, the Realization of Life	402
b. Romance: the Idealization of Life	406
c. Lyric: the Cry of Life	408
d. Drama: the Representation of Life	410
(1) Action Interesting to an Audience	410
(2) Action of Will on Will	415
(3) Action Limited in Time and Place	416
(a) Climax and Conclusion	418
(b) Dramatic Opening	419
e. Oratory: Persuasion about Life	420
3. THE SECONDARY FORMS OF COMPOSITION IN LITERATURE .	422
a. Essay: Discussion of Life	422
(1) Looser Essay, the Spectator Type	427
(2) Stricter Essay, the Edinburgh Review Type . . .	427
b. Novel, the Web of Life	429
c. Short Story, a Crisis of Life	434

PART I

WRITING AND SPEAKING

INTRODUCTION

TO ANY STUDENT OF THIS BOOK:

My dear Pupil:

The misunderstanding between us ought to be cleared up at the start. The object of this book is not to make you write and speak like somebody else, but to help you write and speak like yourself. Whenever I say "Turn it this way," "Drop that," or other imperative sentences now and then, it will not be to make everybody toe a line, but merely to save your time by summing up what all writers know. What all writers know makes the laws of writing. These are not like the laws of the state, but like the laws of sailing. In bringing a boat to the wharf the law is to come up on the lee side. You may learn that law in either of two ways: you may try the windward side instead, smash the bowsprit, and perhaps fall overboard; or you may accept the teaching of an old sailor. When you have learned the laws of sailing you are not less free to go where you wish; you are more free. In fact, you are hardly free at all until you have mastered the laws practically. So it is in writing. The whole object of a text-book of composition is to help you gain your end; the whole object of learning these laws is to apply them practically to your own purposes.

If you are to become a writer in the more special sense, a writer of books, you will achieve finer adjustments of your own the more quickly for having mastered the general laws here; but writers of that sort are so few that a general text-book of composition cannot fairly go beyond what is useful for everybody. To teach composition as a useful

art for everybody, — that is my object; and that opens room enough for profit and pleasure to very different individuals. Whoever you are, I hope to help you compose more clearly by thinking more clearly and by bringing your thoughts to a point; to help you become more interested in what you say by opening your eyes and ears to this good world and by expressing the significance of its sights and sounds to you.

Before we go to work together I owe you one other caution. The rules of composition are not like recipes for cooking. In cooking, I believe, you first read the rules and then measure and mix accordingly; in writing, you first write and then think of the rules. Instead of writing by rule, you revise by rule. The reason is that otherwise you would be trying to do two things at once, to think of what you were saying and at the same time of how you were saying it. Now practically you will not be able to say much that is worth while unless you give your whole mind to what you are saying — to what, not how. Set down the thought. The thought is the thing. Write as well as you can without stopping to change sentences. Then, when you have come to the end, read it all over to see how nearly what you have written corresponds to what you mean. Where it does not correspond, some rule should tell you how to adjust it. And that, after all, is what rules of composition are for, — to tell you how to adjust what you have said to what you mean. Think, write, revise; that is the way to learn.

If you will read my book thus, as it is meant, for a practical guide in that part of your education which consists of giving out, of expressing, what you take in from every other part, I will try to remain

Yours faithfully,

CHARLES SEARS BALDWIN.

CHAPTER I

CLEARNESS AND INTEREST

The themes written in connection with this chapter should be letters.

1. THE TWO OBJECTS OF COMPOSITION, CLEARNESS AND INTEREST

THE object of all writing and speaking is to be clear; a further object of most writing and speaking is to be interesting. We speak that others may understand; we usually speak that they may share our feelings. Clearness and interest, then, sum up all that we try to achieve by words. How far we achieve these ends we know, not from what we meant to say, not even from what we said, but only from the effect on the people addressed. My letter to you is clear only if it is understood by you, to whom I wrote it; it is interesting only if you were glad to read it. The last speech that you heard was clear in proportion as it was grasped by the audience; it was interesting if they were attentive, if they showed by laughing or crying or applauding that they sympathized. There is no point in saying, "That is clear, whether you understand it or not." For all composition is measured by its effects. We write or speak, not to satisfy ourselves, but to make the impression that we wish to make on others. In studying clearness and interest, then, we are studying to adapt means to end. The means are the way of putting words together; the end is to make other people understand us and feel with us. The study of composition consists in learning how to

write and speak so that people will surely understand and sympathize.

2. CLEARNESS IN SENTENCE-FORM

The study of composition is a study of the ways of putting thoughts together; *i.e.*, it is a study of form. One of the first lessons in clearness is to make clear the form of each sentence. The idea is so to frame each sentence that a hearer or reader can follow it instantly. See how this idea can be applied to each form of sentence recognized by English grammar.

Review, with examples, the definition of a simple sentence, a complex sentence, a compound sentence, a clause, a phrase.

Clear Simple Sentences. — The easiest form to make clear is the simple sentence; but even this demands some care.

Coming nearer, the fire was found to be in the hotel.

Grammatical analysis of this simple sentence shows that it lacks a noun to which the participle *coming* may refer.

The fire, coming nearer, was found to be in the hotel.

That, indeed, is grammatically correct; but it is not what the writer meant.

(Coming nearer, we found the fire to be in the hotel.

That is what he meant. Why did he not write the sentence so? Because, starting with the subject *we* in his mind, he so far forgot his plan as to make *fire* the subject instead. (A participle standing at the beginning of an English sentence is always understood, except in "absolute" constructions, to refer to the sentence subject.) The error in the first form of this sentence is called the *hanging participle*. No one will thus leave a participle hanging

who remembers that the *first way to make a sentence clear is to keep one plan throughout.*

Correct the following:

Turning now to the road-bed, gravel is at hand for miles along the line.

Not wishing to insist, this point demands attention.

Hoping to receive your order, prompt delivery is guaranteed.

Putting this aside for the moment, the antagonism of races cannot be ignored.

The following sentence changes its plan in another way:

The day endeared by our New England traditions, and which is annually proclaimed for religious observance, is now little more than a holiday.

(Starting with the intention of two parallel phrases, *endeared by . . .* and *proclaimed for*, the writer carelessly spoiled his parallel by making the second a clause. Starting to write a simple sentence, he wrote an incorrect complex sentence. For the so-called *and which* error is merely another case of failing to keep one plan.

The following sentence might be a clause except for the period or the fall of the voice at the end:

When in Washington he saw the President.

It would be clearer from the start if it omitted the *when*:

In Washington he saw the President.

For then we should know at once that the first words were intended as a phrase.

Cincinnati is nearer St. Louis than Chicago.

What does this mean?

Cincinnati is nearer to St. Louis than to Chicago.

or

Cincinnati is nearer St. Louis than Chicago is.

We cannot be sure; for the form of the sentence does not show us whether Chicago is nominative or objective. Even a grammatically correct simple sentence may fail to make its construction clear. Never leave the form of a sentence in doubt.

Clear Complex Sentences

He kept the money that he gained from printing pamphlets in his bedroom.

Though it is more probable that a man should keep money in his bedroom than that he should print pamphlets there, this is no excuse for what is called the squinting construction.

He kept in his bedroom the money that he gained from printing pamphlets.

The change is simply to put the doubtful modifier *in his bedroom* next to the word it actually modifies, and away from the word it might otherwise seem to modify.

In the same way make the following sentence clear:

They were disowned by the very man who had sought their support when the plot was discovered.

(The second way to make a sentence clear is to place each modifier near the word it modifies.)

Even in a simple sentence the placing of such adverbial modifiers as *only* demands attention.)

I only touched him once
is quite different, of course, from

I touched him only once.

But usually the difficulty arises in complex sentences; and so does the following:

When the French explorers met these Indians, their intention was to be friendly with them.

The doubtful reference of the pronoun *their* is corrected best, as in most of such cases, by recasting the sentence:

The intention of the French explorers, when they met these Indians, was to be friendly.

For the main idea of the sentence (*The intention of the French explorers was to be friendly*) should compose the main clause. Thus the sentence would be even easier to read, if it stood thus:

When the French explorers met the Indians, the French explorers intended to be friendly.

If the result of a complex sentence be made the subject of the main clause, the plan of the whole sentence will probably be clear.

The general advanced to the edge of the platform, when the whole audience cheered.

This sentence is upside down. Evidently the main idea is, *The whole audience cheered*. (But, by putting this into the subordinate clause,) the writer suggests that the general waited for the audience to cheer before he advanced. The clear form is:

When the general advanced to the edge of the platform, the whole audience cheered.

The third way to make a sentence clear is to see that the main thought is in the main clause.

Revise those of the following sentences which leave the construction in doubt:—

A man who has represented this district faithfully for ten years, and who has convinced us all of his honesty, is not to be cast off for a single indiscretion, granting that it is an indiscretion.

Yours of the 14th, received yesterday, and which we have con-

sidered with care, we beg to make the following offer, hoping that it will meet your wishes.

He sauntered up the trail when he suddenly came face to face with the bear.

Clear Compound Sentences. — A compound sentence will probably be clear if it is a true compound sentence. According to definition, a compound sentence has two or more co-ordinate members. Its parts are of equal importance. This is its distinction from a complex sentence. In a complex sentence the clauses are unequal. In a compound sentence the clauses are equal. In a complex sentence there is only one main clause. In a compound sentence there are at least two. And this grammatical distinction of form represents a real distinction of thought. A complex sentence is the form proper to express one main statement with its subordinate, modifying statements; a compound sentence is proper to express the comparison or contrast of two statements by placing them side by side.

(Proper Compound Sentence: Lincoln stood for the principle of Union, and Douglas stood for the principle of states' rights.

Here the sentence is properly compound; for it expresses the single idea of contrast by putting the two contrasted parts side by side. These two parts are co-ordinate; they are equal parts of one idea.

(Improper Compound Sentence: Caesar was afraid of ridicule, and he put aside his wife's entreaties and went after all to the Capitol.

Here the sentence is improperly compound; for the statements, instead of being co-ordinate, are unequal. There is one main statement: *Caesar went after all to the Capitol*. The other statements are subordinate. The first, telling why he went, and the second, telling that he had reasons

for not going, should be clauses; for, instead of being parallel with the main statement, they are merely modifiers. In a word, the sentence ought to be complex:

Caesar was so afraid of ridicule that, though his wife entreated him to remain (*or, as a phrase, in spite of his wife's entreaties*), he went after all to the Capitol.

The fourth way to make a sentence clear is to change its form from compound to complex whenever its parts are not meant to be co-ordinate.

Change to the complex form any of the following sentences that are improperly compound.

God made the country, but man made the town.

Our boat was late, and we had to wait three hours for a train.

The manual-training high school offers less work in language; and a boy intending to enter the academic course at the university had better prepare in the regular high-school course.

For further consideration of sentences see Chapter V.

3. CLEARNESS IN PUNCTUATION AND CAPITALS

As all these counsels of clearness take the point of view of the reader, so also the rules for punctuation and capitals. We should hardly need to punctuate at all, if we wrote merely for ourselves. The object of punctuation is to show a reader instantly the form of a sentence. For punctuation is simply the indication of sentence-form. Considered so, the rules of punctuation become simpler.

But first we may set apart certain conventional rules of punctuation. These may be merely memorized as settled by common usage.

Conventional Rules of Punctuation. — (1) A period stands after an abbreviation:

Hon., D.D., Ph.D., LL.D., Mass., etc., viz.

(2) (a) **A colon** stands at the end of a sentence introducing a *long quotation*:)

J The formal exercises finished, the President rose and spoke as follows:

“Never in the history of our country,” etc.

Sometimes both a colon and a dash (:—) are used in this case. The quotation is indented as a paragraph.

(b) A colon stands before such an *enumeration* of particulars as requires semicolons between the particulars:

J The capital leading questions . . . are these two: first, whether you ought to concede; and, second, what your concession ought to be.

A colon stands at the *beginning* of a letter after a salutation consisting of two or more parts:)

MESSRS. BLACK AND WHITE,
Gentlemen:

A salutation of one line (*My dear Mr. Black,*) more usually has a comma, but may have a colon.

(3) (a) **Commas** divide a *series* of words without conjunctions:

Barrels, boxes, crates, floated downstream.
He swerved, slipped, sprawled.

If a conjunction is used between the last two of the series, the dividing comma is now usually retained, but the comma after the whole series may be omitted:

Barrels, boxes, and crates floated downstream.

If the series is in pairs, commas separate the pairs:

J Great and small, rich and poor, cultured and uncultured, rubbed elbows in that crowd.

(b) A comma is used before a *short quotation*:

It was Daniel Webster who said, "I am a Constitutional Whig."

In this case the quotation is not set off by indentation.

(4) **The other marks** are generally self-explaining:

(a) A point of *exclamation* or *interrogation* stands after a part or after the whole sentence according to whether the part or the whole is exclaimed or asked. In either case it supersedes any other punctuation: ,

Heavens! can this be true?

What? Clap him into jail!

(b) Single marks of *quotation* indicate a quotation within a quotation (" " ").

Marks of *parenthesis* are no longer common, except to insert instances, as in these rules. Still more rarely *brackets* indicate a parenthesis within a parenthesis, [()].

Principles of Punctuation. — But most of the rules of punctuation, and all its difficulties, arise from considerations of sentence-form. Without understanding clearly the relations of his sentence no one can punctuate it correctly. No one can punctuate with his hand until he has punctuated with his head. No one can make a sentence clear to a reader until he comprehends it clearly himself. On the other hand, considerations of sentence-form will reduce many rules of punctuation to a few groups. In general, then, aside from the conventional rules above, punctuation is governed by sentence-structure. Its function is to indicate syntax.

(5) **The period** is used to distinguish sentences from clauses. A period must stand at the end of every sentence. No one can misunderstand that rule; but any one may fail to apply it whenever he has written so loosely as to leave some statement doubtful in form, neither clearly a sentence

nor clearly a clause. If it is a clause, the placing of a period after it will not make it a sentence; if it is a sentence, the placing of a comma after it will not make it a clause. But mispunctuation either way may confuse a reader. First revise the form of the statement till it is clearly one or the other; then punctuate accordingly.

(6) **The dash** marks a place where the *construction is broken*, either interrupted or left incomplete. Therefore it should be used rarely.

(7) **The colon**, except in conventional uses (2), is practically *obsolete*. In older prose it marked a unit midway between a sentence and a clause; in prose of to-day this unit is no longer generally recognized.

(8) **The semicolon** is generally confined to separating the parts of *compound sentences*. Its use being generally to indicate that the parts between which it stands are co-ordinate, it hardly occurs in complex sentences. But not all compound sentences have semicolons. The semicolon is used to *separate parts which have commas within them*; or conversely, when the parts of a sentence have commas within them, these parts have a semicolon between them. This may be called the rule of the foot-rule. In making a foot-rule, if you mark the inches by short lines, you must mark the feet by longer lines. Else nobody can distinguish your inch-marks from your foot-marks. The office of the semicolon is to distinguish the larger divisions of a sentence from the smaller divisions, the co-ordinate parts from the subordinate parts:

If he has any evidence, let him produce it; if not, let him shut his mouth.

Where there are no commas within the parts, a comma is now generally sufficient between them; but many good writers still prefer a semicolon between the parts of all

compound sentences in which the grammatical subject of the second part is different from that of the first. And the semi-colon is generally used in those balanced compound sentences which dispense with a conjunction:

The power of French literature is in its prose-writers; the power of English literature is in its poets.

Except in cases, like the example, where the parts clearly balance against each other to express a single idea, such sentences should be avoided. Otherwise there is danger of merely running sentences together by using semicolons instead of periods.

(9) (a) **The comma**, in general, is omitted or inserted according as a subordinate part is grammatically necessary or not. Omit the comma between parts which are intended to be taken together as one; insert the comma between parts which are not so intended.

(b) In particular, a relative clause is or is not set off by a comma according as it is intended to be *non-restrictive* or *restrictive*. Compare these two sentences:

In this climate there is no opportunity for reading, which taxes the mind.

In this climate there is no opportunity for reading which taxes the mind.

The former means that there is no opportunity for any reading, since all reading taxes the mind; the latter, that there is no opportunity for that kind of reading which taxes the mind, *i.e.*, for hard reading. The former sentence completes the intended sense at *reading*, the following clause being merely an added explanation; the latter sentence does not complete the intended sense until the end. In the former the *which* clause is non-restrictive; in the latter, restrictive.

(c) On the same principle, commas set off *parenthetical expressions*, i.e., words, phrases, or clauses, which are not necessary to complete the syntax of the sentence:

This, my friends, is the whole truth. However my opponent may storm, he cannot add one relevant fact. If he brings up the traction dispute, remember what he said about that when he was not a candidate.

This passage shows that the rule applies to adverbial clauses of condition, cause, or exception (introduced by *if*, *because*, *unless*, *though*, etc.), but not to clauses like the last (*when he was not a candidate*), which are intended restrictively.

A parenthetical expression has a comma after it, before it, or on each side, merely according to whether it stands at the beginning of the sentence, at the end, or in the midst.

Conventional Rules for Capitals. — The idea of *capitals* is to make a word or a form clearer. ‡

1. Thus most languages distinguish *proper nouns* from common nouns (*American, John, Boston*); and English also distinguishes *proper adjectives* (*Roman, Asiatic*). The distinction between *democratic* as applied generally, and *Democratic* as applied to a particular party, is thus made clear.

2. Capitals are used for the pronoun I, the interjection O, the days of the week and holidays, the months of the year (but not the seasons), the words *North, South, East, and West* when they refer to sections of a country, the salutation of a letter (*Dear Sir, Gentlemen*; but *My dear Sir*), and the first word of the subscription (*Yours truly, Faithfully yours*).^d

3. (a) A title of respect or office is capitalized when it immediately precedes the name of a person: *Mayor McClellan, Governor Wadsworth*. ,

(b) Similarly *Street, Mountain, River*, and other such common place-names are sometimes capitalized when they

immediately precede or follow a proper place-name: *Lake Erie, the Ohio River, Mount Ararat*; but usage now permits a small letter: *Decatur street, Whitney avenue, the Connecticut river*.

(c) *Titles of books* are usually written with capitals for all the important words, i.e., all words except prepositions, conjunctions, etc., and always for the first word (*The Advancement of Learning, A Tale of Two Cities*); but, since titles are otherwise distinguished by italics or quotation marks, there is some tendency now to follow the French fashion of capitalizing only the first word (*A college manual of rhetoric, The origin of species*).

4. All names of God are written with a capital; and this usage is commonly extended to pronouns. The sentence *Adversity should drive us to Him* thus makes its meaning clear. But some writers follow the usage of the King James Bible and the Book of Common Prayer in writing *him*, etc., with a small letter. *Bible* (derived from the Greek common noun for book) is capitalized to distinguish it from other books; but in referring to several copies, as in *twenty bibles*, a small letter is used.

5. In order to make the meter and the stanza clearer, a capital begins *each line of poetry*.

The Single Principle of Capitals. — 6. (a) But aside from these conventional uses there is only one rule for capitals. Begin with a capital the first word of every sentence; or, to put it no less usefully, never begin with a capital a clause or any other group of words that is not a complete sentence. The capital at the beginning and the period at the end say to all readers, I mean this for a sentence; and the twofold indication marks the importance, for all writing and reading, of recognizing the sentence unit. No one can go on in composition who does not know whether the words he has written make a sentence or only a clause.

(b) Reporting another's words directly, *i.e.*, as if he were speaking, often brings one sentence within another. In this case the sentence reported also begins with a capital:

The gentleman's speech amounts to asking, Can we afford to renominate a man who has antagonized these powerful interests? and the answer is, We cannot afford to nominate any one but the man who has won the people of this whole state.

Indirect discourse (reporting with *that* or *whether*) dispenses with capitals by reducing the reported sentences to clauses:

The gentleman's speech amounts to asking whether we can afford to . . . and the answer is that we cannot afford . . .

(c) By exception following older usage, *formal resolutions* consisting of a series of clauses begin each clause with a capital, and also each *whereas* and *resolved* introducing it:

¹ *Whereas*, This council has heard with profound regret . . . ; and

Whereas, The justice of the demands formulated has not been questioned . . . ; and

Whereas, The urgency . . . ; therefore be it

Resolved, That this council hereby declare . . . ; and be it further

Resolved, That . . .

Each clause is also indented as a paragraph.

For the use of capitals in abbreviations see the list of abbreviations in any large dictionary.

4. CLEARNESS IN LETTER FORMS

Since the desire to be clear arises from consideration of the reader, it has led to certain usages of courtesy. The use of ink instead of pencil, preference for good white paper, attention to margins, indentation, and folding, are common customs based on a courteous regard for the reader, on

the desire to spare him any unnecessary effort. When we write merely for ourselves, we may be content with scraps in lead-pencil; when we write for others, we have the courtesy to take more pains.

In particular, courtesy has settled in certain usages of letter-writing.

Every letter should be dated clearly; not Cin., 2/3/08, but Cincinnati, Feb. 3, 1908. This saves time in referring to correspondence.

Every letter, except in formal or very familiar correspondence, should be signed with clear fullness:

Wm. B. Rhodes, *Secretary*.

A. K. Foster, *Treasurer*.

Andrew E. Channing, *Chairman, Finance Committee*.

(Miss) Ella Witherbee.

E. K. Nettleton, with explanatory parenthesis, thus:

(Mrs. O. R. Nettleton).

Thus the reader knows exactly with whom he is dealing. The only exception is in cases where such information is given by the printed letter-head.

Formal Invitations, etc. — The usage of courtesy in invitations, acceptances, and regrets is to distinguish between formal and informal occasions. *Formal occasions* are expressed by the third person, without salutation or signature, as follows:

Mr. and Mrs. Alfred Banks request the honor of Mr. Avery's presence on Tuesday evening, October fifteenth, at eight o'clock, to meet the Secretary of War.

3 WOODLAND AVENUE,
October 5, 1907.

This clearly indicates a formal reception requiring evening dress. The recipient thus knows by its form both how to

reply and what to wear. When the occasion, such as a wedding, invites a large company, the invitation is often engraved. Consequently such invitations are often managed by the stationer, who follows for each case the set form in common use. These forms being accessible to everybody that needs them, and varying but slightly, it would be a waste of space to repeat them here. Formal invitations to dinner, which, except for large public dinners, are always written, follow the same pattern:

Mrs. Alfred Banks requests the pleasure of Colonel Douglas's company at dinner on Wednesday, October sixteenth, at seven o'clock.

3 WOODLAND AVENUE,
October 10, 1907.

If the note-paper has the address engraved at the top, only the date is written below.

Replies to such invitations are also in the third person. Though equally formal, they admit some variety of phrase:

Mr. Avery presents his compliments to Mr. and Mrs. Banks, and accepts with great pleasure their invitation to meet the Secretary of War on October fifteenth.

7 DALTON STREET,
October 6, 1907.

Mr. Avery accepts with high appreciation the honor of Mr. and Mrs. Banks's invitation for the evening of October fifteenth.

7 DALTON STREET,
October 6, 1907.

Mr. Avery regrets that a previous engagement compels him to forego the honor of paying his respects to Mr. and Mrs. Banks and the Secretary of War on October fifteenth.

7 DALTON STREET,
October 6, 1907.

Colonel Douglas regrets, with many thanks, that he is not free to dine with Mrs. Banks on Wednesday evening.

FORT STANHOPE,
October 11, 1907.

Colonel Douglas regrets that his duties require him at the post on Wednesday evening, the sixteenth, and assures Mrs. Banks that he retains a high appreciation of her courtesy in inviting him to dinner.

FORT STANHOPE,
October 11, 1907.

Informal Invitations, etc. — *Informal or less formal occasions* are expressed by the first person and by the same method of date, salutation, and signature as prevails for letters in general. Thus in general outline they are alike. They differ each from each in style; that is, they indicate in salutation, signature, and manner of speaking, various degrees of familiarity. And by their style they indicate to the recipient how to reply; for it is a good *general rule of letter-writing to speak as you are spoken to*. Notice the differences of style in the following, and the corresponding differences in reply:

11 FORT STREET,
November 9, 1907.

Dear Mr. NEWCOME,

Mr. Baker and I should be pleased to have you dine with us and a few friends next Saturday, the thirteenth, at half-past seven.

Yours sincerely,
ETHEL BAKER.

Mr. GEORGE H. NEWCOME.

4 LINCOLN SQUARE,
November 10, 1907.

Dear Mrs. BAKER,

Let me accept very appreciatively your invitation to dine with Mr. Baker and you next Saturday evening.

Yours sincerely,
GEORGE H. NEWCOME.

Mrs. ALFRED C. BAKER.

11 FORT STREET,
November 16, 1907.

Dear Dr. PRICE,

I very much regret having been away when you brought the introduction from my dear friend Norton. Will you give me the pleasure of presenting you to Mrs. Baker and talking with you at leisure by dining with us next Thursday, the 20th, at seven? If I cannot find opportunity to call upon you meantime, pray overlook the omission as a hard necessity of this campaign, and believe that I am ready to be

Yours very sincerely,
ALFRED C. BAKER.

Dr. LUTHER A. PRICE.

Notice that in the last letter the subscription is part of the final sentence, as in the more common expression — *I am Yours sincerely, I remain Yours faithfully, Believe me Yours very truly*, etc. In all such cases, though the *Yours truly* stands as a separate line beginning with a capital, the whole sentence must keep one construction. Thus to write — *Hoping that you can come, Yours sincerely* — is bad grammar (page 4).

25 FOOTE STREET,
November, 17, 1907.

Dear Mr. BAKER,

I cannot better express my appreciation of your prompt courtesy than by accepting the invitation to dine with you on Thursday. Much as I should like to see you in the meantime, I beg you will not sacrifice anything to that unnecessary further proof of your regard for Mr. Norton's kind introduction. Surely it is recognition enough to bid me at once to your table. Please let Mrs. Baker know my gratitude for her part in this welcome.

Yours sincerely,

ALFRED C. BAKER, Esq.

LUTHER A. PRICE.

Business Letters. — Clearness is the end of the courtesies of *business letters*:

(1) to begin with a brief reference to any previous corre-

spondence, and to mention any enclosure, such as a check, a catalogue, an order list, samples, etc. (Some firms always repeat this reference in a brief foot-note at the bottom of the letter, to the left, below the signature);

(2) to announce the point promptly;

(3) to state exactly;

(4) to waste no words.

Such habits of clearness are generally useful in all forms of composition.

DUQUESNE DEBATING ASSOCIATION,
DUQUESNE HIGH SCHOOL, PITTSBURGH, PA.,

March 3, 1907.

ARTHUR A. NORMAN, *Secretary*,

MONONGAHELA DEBATING ASSOCIATION.

My dear Sir:

Your challenge to a debate on the evening of May 29th, Monongahela to state the proposition and Duquesne to choose affirmative or negative, having been submitted to our last meeting, I am directed to inform you of our society's acceptance. It was also voted to request that the proposition be sent to us by April 1st, on the understanding that we announce to you our choice of side by April 10th. The committee appointed, at your request, to arrange with your committee for the place of debate, the announcements, etc., consists of the following: E. P. Frost, 17 Lucas St.; J. M. Deering, 99 Leroy Ave.; and L. B. Haskell, 973 Bronson St. They will await your summons to a joint committee meeting.

Yours truly,

CHARLES L. JUDD,
Secretary.

PORTLAND, MAINE,
April 1, 1907.

MR. FRANK R. SALTON,

Dear Sir:

We thank you very much for your permission to fish in Black Brook next Saturday, and we promise to be careful about the fire.

May we ride back with you when you drive down with the mail? Don't trouble to reply. We are coming up on the 6.50, shall start in by Freeman's Ledge, and ought to work down to your house by three o'clock. So we shall have time to walk back, if you cannot take us.

Yours sincerely,

WALTER R. ALLEN.

The reference of this last letter to previous correspondence is as clear for its purpose as that of the former. Such references need not always be formal. The set form often used, *Yours of the — inst. received, and in reply would say*, in spite of its clumsy abbreviation, wastes more than half its words. The reference may be made more directly, and quite as clearly, in a clause or phrase instead of a sentence:

We beg to offer *your entire list of Oct. 7* at . . .

The tennis shoes specified in *your obliging order of April 5* cannot be obtained of the manufacturer before May 1. With your permission, we will . . .

In a word, the reference to previous correspondence should be both clear and brief.

Letters of inquiry and orders are good practice in exact statement.

WOONSOCKET, R. I., April 5, 1906.

MESSRS. JONAS AND COPMAN, 13 MURRAY ST., NEW YORK,

Gentlemen:

Kindly give an itemized estimate on the following camp supplies, and state what discount you would give on a single order for the whole lot enclosing a New York draft, the goods to be delivered at shipper's risk on the wharf of the X. Y. Z. Steamship Co., Nipissing, Michigan. . . . (Write each item of an order or similar list on a separate line, and usually put the whole order on a separate sheet.)

Yours very truly,

RALPH C. JEFFREYS.

NEW YORK, April 7, 1906.

MR. RALPH C. JEFFREYS, WOONSOCKET, R. I.,

Dear Sir:

In reply to your obliging inquiry of the 6th inst. as to a list of camping goods, we beg to submit the itemized estimate enclosed. If you favor us with your order for the whole, covered by a New York draft as you suggest, we shall be glad to allow a discount of five per cent (5%). The necessity of rehandling by any route for delivery at Nipissing would preclude our undertaking the risk of damages in transit; but we suggest the advisability of shipping, all rail, to Boyer, five miles up the river. If this meets your plans, and if you will entrust the unpacking to the Porter Co., our agents at Boyer, who will make no charge, we will undertake the risk. In either case we should pack so carefully as to reduce the risk to a minimum.

In our catalogue, also enclosed, you will notice at page 23 two styles of rubber blanket. No. 200 is the ordinary kind, though our price is somewhat below the usual quotation. No. 201 is manufactured especially for us, to combine lightness and flexibility with durability. We guarantee that these blankets are absolutely waterproof, that they will not crack, and that they will long outwear the average blanket. The ponchos listed at No. 205 are of the same material. The enormous sales of our aluminum reflector ovens (Catalogue No. 302) permit us to offer them this year at a lower price. The block-tin ovens, even with great care, are subject to rust; the aluminum will practically wear forever, and are much lighter.

With these suggestions we beg to commend our estimate to your attention and to assure you of our best care in filling your important order if we have the pleasure of receiving it.

Yours very truly,

A. B. DRUCE, *Secretary*,

JONAS AND COPMAN.

2 enclosures.

Show how these letters fulfill the requirements of business courtesy enumerated above. Write several such letters concerning continuous transactions in some field of business with which you are familiar. For instance:—

1. A, who conducts a large wholesale bakery, acknowledges receipt from BB, millers, of $\frac{1}{2}$ car XXX flour, expresses satisfaction, notes enclosure of check for full amount, with bill for receipt, notes further that he has claimed of the HH Railroad Co. damages for one barrel broken in transit, orders one carload more to be delivered on the first of the following month.

2. A writes to the railroad company to claim damages for the broken barrel. He writes courteously, but positively, explaining the nature and extent of the damage, and enclosing the inspector's certificate.

3. BB acknowledge the check and the new order, enclose the receipted bill, and, referring to the broken barrel, assure of their care in shipment.

4. The HH Railroad Co. courteously refuses damages on the ground of rehandling a broken lot, and returns the inspector's certificate.

5. A reports this to BB, enclosing a copy of the letter from the railroad.

6. BB reply that they have assumed damages by credit on $\frac{1}{2}\%$, and will protest to the railroad.

7. BB protest to the railroad, courteously, but with a hint of withdrawing shipments.

8. The HH Railroad Co. replies to BB, urging the danger of discrimination and pointing out special rate, but paying the claim by check enclosed.

This imaginary example (any similar one may be substituted) shows that the value of courtesy and clearness is enhanced by the fact that business correspondence is continuous, interrelated, and sometimes complex.

In accepting an offer, always repeat it, either by quoting its terms or by expressing it fully and clearly as you understand it.

The position of —, for which you have applied, has been offered to you by telegram. Accept in a telegram of ten words, expressing the most important points of the agreement as you

understand it. Then write a letter of acceptance, mentioning your telegram (better quote it exactly), and going on to repeat the offer fully. Express your readiness for good service, and close with a courteous wish for mutual advantage. Avoid carefully any words implying distrust; but leave no doubt of your understanding.

Following are further exercises in business writing. They may be freely adapted to individual knowledge and preference.

A new company organized to manufacture typewriters (substitute anything else more familiar to you) has advertised for (1) young men as agents on commission, and (2) young women as demonstrators in their salesroom. Write the two advertisements in as few words as will make the positions clear and attractive.

Write a letter applying for either position.

Write a circular explaining the machine in one hundred words; another in two hundred words.

Write a letter as agent of the company asking an interview with the manager of a large office employing six stenographers. From having worked in this office, you know him to be shrewd, quick to make up his mind, fond of few words, a practical judge of typewriters, careful of all the details of his office, well disposed to you. Mention in your letter the chief excellence of your machine and the terms offered by your company for introduction. This letter will open other considerations of letter-writing, which are discussed in sections 5 and 6.¹

5. INTEREST THROUGH ADAPTATION OR CHOOSING TO FIT

In all these ways, sentence-structure, punctuation, attention to letter forms, clearness comes from care to be understood at once by the reader. The object of all writing is to influence readers; and the first means is to open the way to immediate understanding. But it is not the only means. The following letters, very carefully clear, are also something more:—

¹For a reference list of forms of address and subscription see Appendix to Part I.

THREE BUSINESS LETTERS FROM LINCOLN

EXECUTIVE MANSION, WASHINGTON,
Jan. 19, 1865.

LIEUTENANT-GENERAL GRANT:

Please read and answer this letter as though I were not President, but only a friend. My son, now in his twenty-second year, having graduated at Harvard, wishes to see something of the war before it ends. I do not wish to put him into the ranks, nor yet to give him a commission, to which those who have already served so long are better entitled and better qualified to hold. Could he, without embarrassment to you or detriment to the service, go into your military family with some nominal rank, I, and not the public, furnishing his necessary means? If not, say so without the least hesitation, because I am as anxious and as deeply interested that you shall not be encumbered as you can be yourself.

Yours truly,

A. LINCOLN.

EXECUTIVE MANSION, WASHINGTON,
March 1, 1864.

HON. SECRETARY OF WAR,

My dear Sir:

A poor widow, by the name of Baird, has a son in the army, that for some offence has been sentenced to serve a long time without pay, or at most with very little pay. I do not like this punishment of withholding pay. It falls so very hard upon poor families. After he had been serving this way for several months, at the tearful appeal of the poor mother, I made a direction that he be allowed to enlist for a new term, on the same conditions as others. She now comes and says she cannot get it acted upon. Please do it.

Yours truly,

A. LINCOLN.

EXECUTIVE MANSION, WASHINGTON,

April 5, 1864.

MRS. HORACE MANN,

Madam:

The petition of persons under eighteen, praying that I would free all slave children, the heading of which petition it appears you wrote, was handed me a few days since by Senator Sumner. Please tell these little people I am very glad their young hearts are so full of just and generous sympathy, and that, while I have not the power to grant all they ask, I trust they will remember that God has, and that, as it seems, he wills to do it.

Yours truly,

A. LINCOLN.

While Edwin Booth was playing in Boston, his brother, Wilkes Booth, shot President Lincoln in Washington. Edwin Booth's manager wrote at once to the great actor that, with his consent, the theater would be closed until further notice. The following is the reply:¹

FRANKLIN SQUARE, BOSTON, April 15, 1865.

HENRY C. JARRETT, Esq.

My dear Sir:

With deepest sorrow and great agitation, I thank you for relieving me from my engagement with yourself and the public. The news of the morning has made me wretched indeed, not only because I have received the unhappy tidings of the suspicions of a brother's crime, but because a good man, and most justly honoured and patriotic ruler, has fallen, in an hour of national joy, by the hand of an assassin. The memory of the thousands who have fallen in the field, in our country's defence, during this struggle, cannot be forgotten by me, even in this, the most distressing day of my life. And I most sincerely pray that the victories we have already won may stay the brand of war and the tide of loyal blood. While mourning, in common with all other loyal hearts, the death of the President, I am oppressed by a private

¹From *The Life and Art of Edwin Booth*. By William Winter. Copyright, 1893, by Macmillan & Co.

woe not to be expressed in words. But whatever calamity may befall me and mine, my country, one and indivisible, has my warmest devotion.

Yours very truly,
EDWIN BOOTH.

What is the difference between these business letters and those in the preceding section? In a word, interest. And the interest in each case is due, not merely to the writer's fame, but to his way of writing. He writes so as to express, not merely his business, but himself. As we read, we not only understand; we feel. We read with our hearts as well as our heads. There is room for such writing even in ordinary social or business letters, because even in these we are sometimes concerned to stir some regard for us, to make, as we say, a good impression. Thus in the letter of acceptance on page 20 the writer shows himself well-bred and appreciative. By adapting the tone of his reply to the tone of the invitation he shows himself a promising acquaintance. Much more, without the least sacrifice of business clearness and promptness, Lincoln reveals his friendliness, his tenderness, or his faith. Booth had the delicate task of expressing in a dignified manner both his public and his private grief. In each case we feel the writer's appeal to something more than our understanding. He wishes sympathetic interest.

Now business letters often have this further object of awakening interest. How shall it be achieved? In a word, by adaptation. To adapt your letter to your reader, choose what will interest him in you and in your object. This advice considers (1) *you* and your object, (2) your *reader*, (3) the *choosing* which will bring you two into touch. For a good letter *expresses you in such a way as to impress your reader*. Whatever else you learn about writing will be but various applications of this one central idea. First,

your writing should *express* you, not sound like anybody and everybody. Secondly, it should *impress* him or her, not be written for anybody or nobody. Thirdly, the way to achieve both these at once is to *choose* the things that interest you and the manner or style likely to make them interest him. That is adaptation. Without this choosing, or adaptation, no one can make a letter interesting.

Try to write the letters suggested in 1 or 2 below in such a way as to awaken sympathetic interest by adaptation. If some other occasion of writing is more real to you, choose that instead; but let it be an occasion, like these, requiring different letters for different people about the same object.

1. You are organizing a girls' club for weekly social meetings, reading, joint effort among the poor, or some combination of these or other objects. Settle the object definitely in your mind. Then write the following letters. Let each explain clearly why the club would be worth while, and let each try to interest the person addressed.

(1) To a favorite teacher who now lives in another city, asking her advice as to methods.

(2) To the principal of your school, asking the use of a room at certain hours.

(3) and (4) To two friends temporarily out of town, asking them to join (imagine two quite different girls).

(5) To the president of a similar club in another school, asking her to address the first meeting.

2. A movement is on foot to secure from the city the right to use a certain field in one of the public parks for school athletics. To further this, write the following letters. In each case explain clearly what is desired; and in each case try to arouse interest by adapting the letter to the person addressed. Write as chairman of the student committee:

(1) To a friend in another school, asking him to arouse interest there, and suggesting how.

(2) To the principal of your school, asking his support.

- (3) To the alderman of your ward, asking his support.
- (4) To the Park Commissioners.
- (5) To one of the city newspapers (an "open letter," *i.e.*, a letter to be printed and to arouse the sympathy of the public).

Every letter of *application* is a problem in adaptation. The more one knows of the person addressed, the better; but even without this knowledge a letter of application may recommend its writer by clearness, conciseness, and courtesy. In general, the problem of such a letter is to explain one's ability fully without boasting, and to show it, if possible, by the manner of the letter itself. A pleasing address, as of one who knows how to meet men, and a way of expressing a point exactly without waste of words, are recommendations for almost any business. Every letter of application should state the applicant's age, his experience or training, and his references, and should show appreciation of the position without undue eagerness.

W. 77

143 HUNT STREET,
June 10, 1908.

Messrs. JENKS and OSBORN, Auditorium Building,
Gentlemen:

At Miss Fry's suggestion, I beg to apply for the position of typewriter and stenographer in your office for two months, from July 6 to September 5, to fill out the remainder of her year at the same salary. If my work should prove as satisfactory as I have reason to hope, I should be glad to consider an offer of a longer term and larger responsibility; but I should undertake the shorter period without any further understanding. I am eighteen years old, strong in health, graduate from the ——— High School next June, tenth in a class of one hundred, and have had two years' experience as a typewriter. Though my stenography is not yet perfect, I should agree to keep up my study and practice, and I can take all ordinary dictation directly on the machine. For copying, which I understand to be a large part of Miss Fry's work, I have the commendation of Mr. Henry A. Fairman, 23 Decatur

St., for whom I have worked as additional typewriter in spare hours for the past two months. From my school training, and from practice last summer in the office of Messrs. Roome and Weld, 123 Audubon St., I have learned to compose routine business replies from brief directions without full dictation. Besides the persons already named, ———, Principal of the ——— High School, and the Rev. James Brown, 13 Clinton Place, have kindly offered to vouch for my character and ability.

An oral reply through Miss Fry would be sufficient to suggest that I call at your office for trial, or to inform me that you have other plans.

Yours very truly,
GERTRUDE SWAIN.

CARNEGIE TECHNICAL SCHOOLS,
May 21, 1908.

Mr. GEORGE C. BASCOM, Sales Manager, ——— Office, ——— Chemical Co.,

Dear Sir:

I beg to apply for a position as temporary assistant bookkeeper next summer. The Director of the Carnegie Technical Schools and Dr. Rufus Green, Professor of Mathematics, will testify to my general ability. A position last summer as assistant teller in the Grove National Bank of St. Louis gave me practice in applying the modern business methods that I had learned in the Commercial High School of that city during the previous year. Though my main object is to earn money to complete my course in industrial chemistry here next year, a position with you would have the further advantage of making me familiar with the business side of my profession. For this reason, and through the references above, I beg to assure you of my best endeavor in the event of your choosing me. Meantime I shall be glad to confer with you, if you will give me the favor of an appointment.

Yours very truly,
HENRY B. ROSS.

Apply for one of the positions advertised in the morning paper, or for any other, real or imaginary, of your own choice.

A friend of yours, who needs out-door life for his health, is too poor to pay for it. Write to your uncle, who has a ranch at —, asking him to take your friend among his workmen on board wages.

Recommend to an invalid woman of your family or acquaintance one of your school friends as companion and assistant without pay during a summer in Europe.

6. INTEREST THROUGH SPECIFIC DETAILS

If there is room for adaptation in business letters, there is need of it in more familiar letters; and the more familiar, the more need. Familiar letters open the widest opportunity for adapting ourselves to our readers. Indeed, the object of such letters is not so much to convey information as to awaken sympathetic interest and give pleasure. A familiar letter fails if it is dull.

PEORIA, ILLINOIS,
May 2, 1906.

Dear GEORGE,

Yesterday our class went on a May Day picnic. We assembled in Room 7 at 9 o'clock with our lunches. At 9.15 we took the Interurban Electric Railroad for Fayetteville, where there is a park. On the car we sang, ending with the Star Spangled Banner. When we arrived at the park, leaving our lunches with the keeper, we played various games till the teacher called us to lunch at noon. After lunch the girls went botanizing with the teacher, and the boys played baseball. The in-field is pretty good; but there are bushes in the out-field. Jim Blake doubles up like a clown when he is pitching. The boys say he is trying to imitate McCarren; but he made the score 7 to 5 for our side. At five o'clock we all took the car back, arriving at six, after a very enjoyable day.

Have you cut the pup's tail yet? Old Tom says it is time.

Yours sincerely,
ARTHUR.

Why is that a dull letter? Because anybody might have written it to anybody. It has no more personal interest than a time-table. How can George be interested in such a dry summary of facts? What he would like to read, instead of nine o'clock, five o'clock, lunch, etc., is some details that would help him live over that day with Arthur. Arthur says it was enjoyable; but he does not make it enjoyable to George. He does not choose anything in particular; he simply sums up everything in general. No, that is not fair to him; for his letter has two details that are interesting. The pup may not be interesting to everybody; but it is evidently interesting to George and Arthur. Jim Blake is much more interesting because George chooses something characteristic to say of him: "he doubles up like a clown." Those words help us to see Jim Blake. The way to make your letters interesting is to choose those sounds and sights, those motions, attitudes, colors, smells, which gave you pleasure; for they will help your reader to put himself in your place. If this method forces you to omit some of the events of the day, never mind. It is better to make a part interesting than to make the whole uninteresting. If you choose the interesting part, you will have room to put in those details which make it interesting.

PEORIA, ILLINOIS,

May 2, 1906.

Dear TOM,

Yesterday was the great May Day game between the Reds and the Blues. Nearly the whole of Room 7 was on the Fayetteville car, and sang so loud that Miss Adams said we'd be put off. But the conductor just winked, and only one old lady looked sour. While we were waiting on the last switch, a fat man stood up and said "Silence!" in a solemn way. We thought there was trouble; but he looked all around and called for the Star Spangled Banner. The girls started it too high, of course; but we made the windows rattle. The motorman poked his head in the front door. I

thought he was going to join in; but he just opened his mouth and looked queer. The fat man yelled like an Indian. Miss Adams says he was in the Spanish war.

Well, I started to tell you about the game. Jim Blake may put on airs; but he can pitch, and that is what pulled the Reds through. At first, though, he began by just dropping balls on the bat. Andy Green lifted one over center, where I was. They all yelled, "Easy for you, John"; and I thought it was; but just as I was going to hug it I tripped backwards over a laurel bush. The ball ran away, Ted ran into me, and they made a home run. Thorne got them another by the biggest slide you ever saw. They had to pick him up, he had the wind knocked out of him so. Next inning put us two ahead; for Jim had settled to his form. We pulled out 7 to 5. So we think we are good enough for you now any Saturday your team can come over.

Yours always,

JOHN.

Why is this letter more interesting than the other? Looking back over the advice in this section, see how it applies here. What facts are left out of the second letter? What details are put in?

Explain orally in a connected account of three minutes how the second letter achieves interest by choosing, or adaptation.

Suppose that you have an uncle living in Germany. Plan a letter to him as follows:

(1) Choose the most interesting event, or events (but do not choose more than three), in your experience of the past month. Choose what interests both him and you.

(2) Jot down a list of the details that made this event interesting to you; *e.g.*, the movements of people, the sounds, colors, smells — whatever came to you through your five senses. A crowd before an election bulletin, an incident at school, the new automobile, the new-year bells, Arbor Day, a torch-light parade, your electric motor, — anything that interests you will interest him, if you write such details.

(3) Write the letter freely and frankly at some time when you can finish it at one sitting.

(4) Correct, revise, and copy it two days afterward.

Write another letter to a friend of your own age, using the same event or events as in the former letter, but making a new choice of such details and words as will rather interest him or her, *i.e.*, adapt the material to another reader.

Write a third letter on the same subject to your younger sister, supposing her to be away from home.

Suppose that your elder brother, a soldier in the regular army, is now stationed in the Philippines, and that you write to him a weekly letter. Omitting household news, select from the events of the past week topics of interest to you, and make them interesting to him.

To write familiar letters as exercises is at best an artificial device. It is unreal. The real practice in composition, larger and in some ways better than any other, is one's real letters. The oftener these are written with an earnest effort to be interesting as well as clear, the more rapid will be the gain in skill. Sometimes, especially when the letter is important, revise and copy; for it is only in revision that you can well think of rules. But usually try to gain your effect without copying; and, to this end, (1) think why you were dissatisfied with your last letter, (2) just what you propose to put into this one, and how to put it best for your reader. Thus *pre*vision may save *re*vision. For most of us, no other writing compares in value and importance with letters. A letter may even turn the course of a life. You cannot afford to be read at less than your best. The best possible practice in composition is to make every letter a study in adaptation.

7. CLEARNESS IN WORDS

Good Habits in Words. — *Revision.* — The last consideration for clearness in writing is the choice of words — not the last in importance, but the last in time. For at first clearness depends, not on separate words, but on thought and on form. We fix our minds first solely on what to say, on the thought; then on how to say it, on the form; finally, when this is straight, when the form is made to correspond to the thought, on the fitness of the separate words. For if we lingered over each sentence and each word at first, we should so interrupt ourselves as to make composition painful and sometimes to lose the line of thought altogether. The most practical way is first to think, perhaps jotting down notes for reminders; then to write from beginning to end with as few pauses as possible; then to revise the order, especially of sentences, wherever there appears an opportunity for clearer form; then finally, with the aid of a dictionary, to substitute for any doubtful or obscure words others that are more exact. This process, though it is too long to follow for every letter, should be followed for every letter that is composed as a theme and in as many other cases as offer sufficient time. Revision in this way so increases a writer's grasp of expression that he writes more and more easily and clearly his first draft. The revision of the first letter makes the revision of the second easier and simpler, and so on until the writer has acquired a habit of clearness. This applies especially to the choice of words; for every use of the dictionary gives more exact knowledge of a word already known, and probably adds a new word. A practical way to gain clearness in the use of words is to revise with a dictionary.

Alertness in Conversation. — For clearness in words cannot be acquired without care. It is gained by cultivating a habit. Now in forming such a habit writing may be much helped by speaking. True, every one needs to be more careful of the words that he writes than of those that he speaks; that is expected; but it is harder to become careful of the words written while one is careless of the words spoken. True again, we cannot often hesitate in speaking to choose the exact word; we must often use the handiest; but afterwards it is worth while to consult the dictionary, so as to know the exact word to express that idea next time. Each time this is done makes for a definite increase in command of language. The habit may be confirmed by noticing for investigation in the dictionary every new word that occurs in conversation, and every new use of an old word. Indeed, no single means of learning to speak and write is more important than a habit of noticing words. It has even wider importance; for no one can really learn a new word or a new use of a word without learning a new thing, a new idea, or a new distinction. The words that we have at command simply measure our education. The habit of noticing words, then, is one means to the general habit of accurate observation.

Care in Enunciation. — All the while, since we speak continually and write seldom, we may confirm the habit of accurate use by accurate enunciation. Though the mere sound of a word may seem to be the least important thing about it, yet in fact care of the meaning is undoubtedly helped by care of the sound; and conversely, carelessness of the sound usually promises carelessness of the meaning. The girl who thinks that *library* is pronounced *libery* probably reads with little discrimination the books that she draws from it. The boy who always says *Whachegondo?* for *What are you going to do?* is not likely to write with care. Care-

fulness of observation, to be an effective means of education, must become a whole habit; and carefulness in written words, as a means to clearness, will be directly helped by carefulness in speech. The habit of noticing the sound will help the habit of noticing the meaning.

The two hindrances to careful enunciation are laziness and false shame. Though these must gradually be overcome in conversation by every one who is to gain much influence over his fellows, yet the best opportunities for forming a habit of precise utterance come when we address a whole company. Every recitation calls for more care in speech than we commonly practice in conversation, because otherwise we cannot be well understood. Careless enunciation in talking face to face is often understood because we guess from the context more than we really hear. Even in conversation it risks a loss of influence and confirms a bad habit; but in addressing an audience it will not do at all. So soon as you are removed even a few yards from your hearers and have to address more than two or three persons, you must enunciate deliberately and precisely. And a full use of this daily opportunity to cultivate precision in the sounds of words will help to cultivate precision in their application.

Good Manners in Words.—*Usage as Recorded in the Dictionary.*—Indeed, it is natural that thoughtfulness of one's hearers should help thoughtfulness of one's readers; and clearness is measured by the effect on hearers or readers. If we were talking to ourselves, we might mumble; if we were writing for ourselves, we might be less precise. And consideration of hearers and readers demands of our use of words, in addition to precision of sound and precision of sense, conformity to good use. The dictionary tells, not only how a word is pronounced and what it means, but whether it is in good use.

Some words that we often hear on the street are not in the dictionary, because they are not used by good writers and speakers. Other words are there, indeed, but are marked with a caution in parenthesis: (*colloquial*), that is, used by good writers and speakers in conversation, but not in public address or writing; or (*vulgar*), not used publicly by any one who is careful of the reputation of his style. This ranking of words as in good use, or in good conversational use, or not in good use at all, the dictionary does not decide; it merely records. The dictionary is a record of the usage of its time. We follow it, we conform to good use, because we wish our words to be effective.

For obeying the dictionary is merely conforming to the general habit of good writers and speakers everywhere. We obey the dictionary because we wish to become familiar with those verbal customs which are not confined to any locality or any set of people, but are recognized everywhere as good manners in language. Otherwise, by some singularity of speech we shall distract attention from the matter to the manner. We obey good manners in language in order to widen our influence, in order to be able to address any one with some prospect of effectiveness. Good manners in language, like good manners in eating or greeting, prepossess people generally toward us by showing our familiarity with the ways of the wider world and our wish to apply these ways to our audience as a mark of courtesy. No one can doubt this value of good manners, in words or in any other form of intercourse, who has seen much of the world.

Those who fear lest they be thought to put on airs if they attempt to use words more nicely than some of their friends should remember that every one who extends his influence among his fellows has to conquer this false shame. False shame in intercourse, while it fails to recommend any one long to his own little circle, stunts his growth, hinders all

his attempts to appeal to a wider circle. It is a poor compliment to his friends, and a real harm to himself. Without in the least disparaging those friends who are afraid to say anything different from the random talk of the neighborhood, a young man or woman may learn — indeed, must learn for any real success, better manners, manners more generally accepted. Of such manners in words the record is the dictionary. Good manners are the manners, not of some set, but of all good company in general. As they can never be mastered in other things by those who have too much false shame to venture beyond any small society in which they find themselves, so they can never be mastered in language by those who fear to speak better than the uneducated and the careless. The privilege of the best society for the manners of language is universal. The best books are to be had everywhere; and the dictionary, which is the record of their agreement as to spellings, pronunciations, and meanings, is open to everybody. To limit oneself to the local and passing usage of the street is to fly in the face of that old proverb which is truer of words than of any other form of intercourse, "*Manners maketh man.*"

True, the use of words changes. Every living language must change in order to grow. A language is never fixed till it is dead. Shakespeare has many words which the growth of English has cast off; he has many more words in certain senses that are attached to them no longer; he lacks, of course, thousands of words that have come into use since his time with the new things for which they stand, thousands of uses to which his own words have been turned by the necessary adaptation of language to new conditions. But this constant change in usage is too slow to cause any real difficulty in speaking or writing correctly. It is easy enough to follow the dictionary. In order to record changes

in use so soon as they become wide-spread among good writers, the dictionary is always being revised. If a use that we hear is not recorded in the standard dictionaries of our decade, we may confidently assume that it has not yet become general. In such cases the better way is to wait; for the duty of the individual speaker or writer toward his language is, not to lead, but to follow. He knows that language changes; but he does not try to change it.

Usage as Reputable, National, Present. — Good use, or correctness in language, has been admirably defined by Dr. Campbell as (1) *reputable use*, (2) *national use*, (3) *present use*. Negatively this means that, for the sake of good manners, we should not use a word, or an application of a word, that is (1) *disreputable*, not used by speakers and writers of reputation; or (2) *local*, confined to some section, trade, or profession, not used throughout the country; or (3) either *past* or *future*, not accepted now. Dr. Campbell meant that a word, or a use of a word, to be correct must have, not one of these marks, but all three. Present use may be incorrect because it is disreputable or local; a use once reputable, or somewhere reputable, may be incorrect because it is not present or not national. A standard dictionary contains all words that are reputable, national, and present.

Slang. — Present use as opposed to past use we need not discuss; for few of us are tempted to use abandoned old words. But what of slang? Plainly slang, though in a certain peculiar sense it is present, is neither reputable nor national. The most characteristic mark of slang is that it is usually here to-day and gone to-morrow. Further, it is often limited in territory. Certain slang phrases common in San Francisco may never be heard in Chicago. The slang of Minneapolis may not reach New Orleans. Slang, in

fact, is peculiarly perishable. It seldom covers much time or much space. But does not slang sometimes pass into good use? It does, and thereby ceases to be slang. First it passes from local use into national use. Then it is adopted by some speakers and writers of reputation, then by many. Being thus finally both reputable and national, it is recorded in the dictionary. But it is an error to suppose that such cases are common. On the contrary, they are very rare. People who defend the use of slang on this ground are making Dr. Campbell's *present* read *future*. In their wish to be abreast of the times, they are a little ahead; and in nine cases out of ten the nation as a whole will not adopt their recommendation. People who are really careful of their words wait. Knowing that slang rarely lives long enough to be recorded in the dictionary, they prefer words that have proved themselves permanently effective.

But slang is used for a time, not because a few people try to keep it alive, but because many people are ignorant of true values in words. It is easy to fancy that slang has more value than it usually proves itself to have in experience. Though slang is used most often from sheer carelessness, it is also used deliberately by some people with the idea of being effective. That is a sound motive. Indeed, it is the best motive in all use of words. At bottom, that is what we use words for. But slang, instead of making speech effective, actually makes it ineffective. Those speakers who make most use of slang are most limited in conversation. They may amuse a small circle on the street corner or at school recess, in the department store or on the baseball field; but so soon as they step into any company of wider interests they are tongue-tied. Like the cattle-men on the plains, who in their isolated and restricted life reduce their speech to slang and oaths, they cannot use the wider language. And if this is true of conversation, how much more

emphatically does it apply to speaking or writing addressed to a larger company! Slang is narrowing and stunting. For the sake of a cheap immediate effect upon a few acquaintances it sacrifices growth into a wider command of language. The question of slang, then, reduces itself to this: are you content to stay where you are, or do you wish to widen your vocabulary by widening your life?

8. INTEREST IN WORDS

Homely Words. — It is plain enough from the letters in this chapter that interest, far more than clearness, is an affair of words. To be interesting we need to choose, not only the right things to say, but also the right words in which to say them. Even the use of slang springs sometimes from this good motive, from the desire to be interesting. It has even further excuse; for it shows that one way to be interesting is to choose words that are familiar and homely. If slang, then, is to be rejected, how shall we make our speech interesting? The answer is clear. We may be as familiar and homely as we choose without slang. Indeed, the great objection to the use of slang is that it hinders the gaining of a store of words homely, but not coarse; familiar, but not disreputable. Slang is not really homely. It comes, not from the home, but from the music-hall and the street. It is not really familiar; for it is known only within a limited circle. What we need for interest is a habit, and an increasing store, of words really homely and really familiar to everybody that has command of the English language. The dictionary contains such words by the thousand. If more people were discontented with slang, these words, instead of being neglected, would be used increasingly, to the heightening of real interest in language. Here are a few of them. The list might easily be increased tenfold, and will be by those

who keep their eyes and ears open. But for a beginning underline each of the following of which you are not sure, and day by day search out one or two in a large dictionary. By gradually learning to use these in fit places you will tend to notice good homely words and thus to salt your speech.

Some Homely Words in Good Use

Ail, antic, back (v.), balk (v.), blackmail, blink, boor, brag, brawl, budge, bungle, cant (n.), chuckle, churl, clap, clinch, clog, clutch, curt, daft, daub, dawdle, dock (v.), dolt, drone (v.), drub, fag (v.), fang, fetch, flinch, foist, fumble, fume, fuss, gabble, gad, gang, garble, glib, glum, glut, grub (v.), grudge, gruff, gulp, hag, haggle, headstrong, hearsay, heave, hoax, hobnob, hodge-podge, hoodwink, huff, hush-money, inkling, jaunty, jeer, job, jog, jolt, kidnap, knack, lag, lank, leer, loll, lout, lug, makeshift, maul, mess, mope, mumble, nag (v.), new-fangled, niggardly, nudge, odds, offset, outlandish, pat (a.), peevish, pert, plod, prig, quack, qualm, quash, quirk, quit, ram (v.), rank (a.), ransack, rant, rip, romp, rot, ruck, sag, scare, scramble, scrawl, scribble, scuffle, sham, ship-shape, shift, shirk, shred, slam, slink, slipshod, sluggard, smash, smother, smug, sneak, snivel, snub, snug, sop, spill, spurt, squabble, squat, squeamish, stuff, sulk, tang, tawdry, tether, thrash, truckle, tussle, twit, underling, uproar, upside-down, vent, vixen, warp, whack, wheedle, wince, wrangle.

Idioms. — Most homely of all expressions in any language are its idioms. *An idiom is a grammatical construction, or a turn of meaning, peculiar to the language or family of languages.** Thus it is an English idiom to say in greeting, How are you? The French idiom is, How do you carry yourself? (*Comment vous portez-vous?*) It is an English idiom to use the phrase *many a* with a singular noun. Some idioms seem ungrammatical, because they are relics of older constructions that have passed out of general use. Other idioms keep alive old, proverbial meanings, giving

us pictures of the life of our ancestors. In either case an idiom is usually a survival. Its interest lies in its being familiar from its very age. Thus it is the opposite of slang, which is above all new. An idiom has that interest which we feel when we call English our mother tongue. Besides, idioms are usually interesting because they call up pictures. *By hook or crook* is a more interesting expression than *by any means possible*, because it appeals to the imagination. Thus the use of idioms makes speech interesting by making it homely and picturesque. In the following lists underline any idioms of which you are not sure, and gradually acquire these in the way suggested above. Some of them contain, not only a picture, but a story.

Some Idioms of Syntax

- | | |
|--------------------------------------|-------------------------------------|
| (1) Five cents a (or the) pound. | (6) All of a piece. |
| (2) A ten-foot pole. | (7) The town we live in. |
| (3) Read the first three pages. | (8) I don't know but you are right. |
| (4) That friend of John's. | |
| (5) Many a great man has begun poor. | (9) I had rather not. |

Some Idioms of Meaning

- | | |
|-------------------------------------|---|
| (1) Five dollars to boot. | (14) It stands to reason. |
| (2) By hook or crook. | (15) A movement is on foot. |
| (3) Hand to mouth. | (16) The long and the short of it. |
| (4) A dead lift. | (17) Born with a silver spoon in her mouth. |
| (5) Beside the mark. | (18) On tenter-hooks. |
| (6) A chip of the old block. | (19) Penny wise and pound foolish. |
| (7) The quick and the dead. | (20) At odds over something. |
| (8) A man of straw. | (21) Tit for tat. |
| (9) A tempest in a teapot. | (22) On hand. |
| (10) Touch and go. | (23) Cheek by jowl. |
| (11) Through thick and thin. | (24) Head over ears in. |
| (12) Not worth his salt. | |
| (13) Neither fish, flesh, nor fowl. | |

- | | |
|-------------------------------|---|
| (25) All at sea. | (44) Hit on a new way. |
| (26) Drive the nail home. | (45) Set one's teeth on edge. |
| (27) Lay down the law. | (46) Give an old friend the cold
shoulder. |
| (28) Cap the climax. | (47) Laugh in one's sleeve. |
| (29) Turn the tables. | (48) Draw in one's horns. |
| (30) Stand on your own legs. | (49) Have him on the hip. |
| (31) Read between the lines. | (50) Turn tail. |
| (32) Leave no stone unturned. | (51) Cast in one's teeth. |
| (33) Put a flea in his ear. | (52) Set eyes on. |
| (34) Wash your hands of that. | (53) Show the white feather. |
| (35) Take him down a peg. | (54) Make him sing another
tune. |
| (36) Peg away. | (55) Hug the shore. |
| (37) Hark back to that. | (56) Pay the piper. |
| (38) To make head against. | (57) Have a hand in. |
| (39) Make a cat's paw of. | (58) Have a mind to. |
| (40) Mince matters. | (59) Get wind of. |
| (41) Knuckle under. | (60) Sit between two stools. |
| (42) Break the ice. | |
| (43) Turn up one's nose at. | |

Tell the following familiar story orally in homely words, so as to make it interesting to a club of street-boys.

Write it out as part of a letter to a little brother.

The young cavalier we have so often mentioned (Raleigh) had probably never yet approached so near the person of his sovereign, and he pressed forward as far as the line of warders permitted, in order to avail himself of the present opportunity. Unbonneting, he fixed his eager gaze on the Queen's approach, with a mixture of respectful curiosity and modest yet ardent admiration, which suited so well with his fine features that the warders, struck with his rich attire and noble countenance, suffered him to approach the ground over which the Queen was to pass, somewhat closer than was permitted to ordinary spectators. The night had been rainy, and just where the young gentleman stood a little pool of muddy water interrupted the Queen's passage. As she hesitated to pass on, the gallant, throwing his cloak from his shoulders, laid it on the miry spot, so as to insure her stepping over it dry-

shod. Elizabeth looked at the young man, who accompanied this act of devoted courtesy with a profound reverence and a blush that overspread his whole countenance. The Queen was confused, and blushed in her turn, nodded her head, hastily passed on, and embarked in her barge without saying a word.

— SCOTT, *Kenilworth*.

Besides the proverbial expressions among homely idioms there are many proverbial sentences, bits of practical wisdom handed down in picturesque language. Learn any of the few following that you do not know, and add others as you hear them.

Proverbs

, A bird in the hand is worth two in the bush.
Time and tide wait for no man.
All is fish that comes to his net.
All her geese are swans.
Hedges have eyes, and little pitchers have ears.
Let a sleeping dog lie.
Nothing venture, nothing have.
The proof of the pudding is in the eating.
A watched pot never boils.
'Tis an ill wind that blows nobody good.
You may lead your horse to water; but you can't make him drink.

Apt Words. — But we cannot always be interesting by being homely and familiar. There are persons to whom we should not address such words as *budge*, *daft*, *rip*, *sneak*, *tit for tat*. There are occasions in which such words would be out of place. For interest has been seen to depend also on adaptation. Interesting as homeliness is for a general habit, it will not always answer. A larger consideration is aptness, the suiting of words to the person and the occasion. And for this the best practice in the world is the writing of

letters. Every letter is a problem in choosing, not only what things to say, but in what words to say them.

Here is a letter from a lad of sixteen to an elderly friend of the family, a man of refinement and habitual care for the courtesies.

11 STUART ST., WOONSOCKET, R. I.,
Jan. 18, 1906.

Dear Mr. BARNES,

I am out of a job, and I guess you will have to help me to something better. That Potter, to whom you recommended me, turns out to be a skinflint. He tries to work everybody a little over time. Of course you didn't know this, or you wouldn't have expected me to stay. I have money enough to keep me here a fortnight; but I depend on your influence, having very little chance to put other lines out. Thanking you for past favors, and hoping to hear from you very soon, I am

Yours sincerely,
ALFRED SUTTON.

This letter, though it is correct and clear, is all wrong for its purpose. The pert, familiar type is quite amiss from a lad to his elderly benefactor. Instead of achieving its object, to awaken Mr. Barnes's sympathy and active interest, it gave offence. Instead of winning a better position, it won a reprimand.

Rewrite it as it should have been written for its purpose.

The manager of a school football team was instructed to suggest to the manager of the rival team that a certain player was undesirable, though perhaps not technically ineligible. The matter was delicate; for the object was, if possible, to have that player withdrawn without formal protest. The two schools had always been on good terms. This is what the manager wrote:

STANTON SCHOOL,
Nov. 10, 1906.

Mr. J. T. BLANCHARD,
Manager, Valley Hall Football Association,
Dear Sir:

There is a good deal of excitement here over the report that you intend to put in Waldron at center. You had better not try that. Waldron may be eligible, though we doubt it; but even if he is, everybody knows that he is not really a regular student. He went back just to play football. We believe that a man like that on a team hurts the sport. So if you expect us to play with you next year, take Waldron out of the game.

Yours truly,

E. R. PHILLIPS,
Manager.

On reading this letter, the captain of the Stanton football team rejected it, and wrote himself as follows:—

STANTON SCHOOL,
Nov. 10, 1906.

Mr. J. T. BLANCHARD,
Manager, Valley Hall Football Association,
Dear Sir:

There is considerable excitement here over the report that you intend to put in Waldron at center. We should pay no attention to this report if we were certain that you knew as much about Waldron as we do. Here, where his home is, nobody regards him as a real student. Everybody says that he went back just to play football. So, if you put him on, a good many people would accuse you of professionalism. We know that your team never needs bolstering up in that way; and we count on Valley Hall to stand for the best spirit of the game. All we wish is to let you know the facts. We rely on your decision; for we are anxious to play with you next year as well as this.

Yours sincerely,

E. A. BOARDMAN,
Captain.

Wherein is the captain's letter better adapted to its purpose than the manager's?

Read the second scene of Act III in Shakespeare's *Julius Caesar*, to discover how Antony's choice of words was better adapted to the mob than Brutus's.

You have been invited to sup and spend the evening at the house of an acquaintance, of your own age and sex, with whom you have no desire to become more intimate. Without positively disliking him (or her), you have so little sympathy with his (or her) tastes that closer acquaintance seems a waste of time. Besides, at present a prize competition leaves very little time for your real friends. Write a brief letter declining, not only with courtesy, but with consideration for the feelings of your correspondent, and without giving the false pretext that you are fully engaged.¹

Write a letter of thanks (*e.g.*, for a birthday gift), (1) to an elderly uncle, (2) to a friend of your own age.

Write a letter of congratulation on a friend's winning of a prize or an appointment. Tell first, on a separate sheet, who your friend is, and what the prize.

The following letter from a schoolgirl to her aunt fails in interest by failing in aptness. In her very proper desire to be elegant the writer has become stilted. The aunt must think either the letter unnatural or the girl a prig. Certainly she could not find the letter interesting. Write a similar letter to your own aunt, (1) choosing from your studies a few specific details that seem interesting, and (2) choosing words which, though not too homely from a younger to an older person, shall still be simple and have the interest of sounding like yourself.

WATERBURY, CONN.,
May 11, 1907.

Dear AUNT LAURA,

I seize the first opportunity of replying to your inquiries concerning my present occupations and the happiness of my sojourn

¹ Adapted from an exercise given in Manchester Ruskin Hall, as cited in *The Writing of English*, by P. J. Hartog, Oxford, 1907.

at the seminary. In the introductory French course Mademoiselle Ricard has commended my progress, though it is not equal to my anticipation. In music we have the advantage of an instructor from Yale University, who has organized a very pleasant chorus in addition to his teaching of individuals. Latin is very difficult. I cannot imagine what advantage it offers to a young lady's education; but I bow to the commands of my superiors. Algebra and history, though sometimes requiring long preparation, offer excellent training. Our work in English composition is devoted at present to cultivating propriety and elegance in letter-writing, an accomplishment that I earnestly desire.

Trusting that you are enjoying your usual good health, and that we shall have the pleasure of your company in June, I remain
Yours affectionately,

LUCY.

The last letter shows that failure in aptness may come, not only from words that are too low for the occasion, but also from words that are too high. Indeed, there are few occasions on which the apt word may not also be simple. In the earlier days of the Kingdom of Israel a prophet thus addressed a King:

And the Lord sent Nathan unto David. And he came unto him, and said unto him, There were two men in one city, the one rich and the other poor. The rich man had exceeding many flocks and herds; but the poor man had nothing save one little ewe lamb, which he had bought and nourished up: and it grew up together with him, and with his children; it did eat of his own meat, and drank of his own cup, and lay in his bosom, and was unto him as a daughter. And there came a traveller unto the rich man, and he spared to take of his own flock and of his own herd to dress for the wayfaring man that was come unto him, but took the poor man's lamb and dressed it for the man that was come to him. And David's anger was greatly kindled against the man; and he said to Nathan, As the Lord liveth, the man that hath done this thing shall surely die, and he shall restore the

lamb fourfold, because he did this thing and because he had no pity. And Nathan said to David, Thou art the man. (II Samuel xii. 1-7.)

Explain the aim and methods of the —— Society, to which you belong, (1) in the words of its constitutions or in such words as might be used for that purpose; (2) in a letter written to arouse the interest of a friend.

Having read in a large dictionary the definition of one of the following, make the explanation fuller and simpler for a boy of nine. First rehearse orally; then revise orally with a view to adding interest; and finally write out in about one hundred words.

oriole	tide	savings-bank
canoe	incubator	park
diphtheria	patriot	gas
block-signal	hound	soldier.

Rewrite in simple words for the same boy one of the important rules for baseball, football, or some other game. First copy the rule from the official book; then adapt it orally, as above; and finally write it.

Explain in as few words as will be consistent with clearness how to travel from —— to —— . Then expand and simplify these directions in a letter of advice to a younger cousin, making them both unmistakable and interesting to him (or her). Omit no essential detail, but by emphasizing important points be careful to avoid confusion. Sum up the most important in the last sentence.

Aptness, then, comes from a habit of choosing words to fit; and this is a means of interest always. Homely words are interesting usually, because most of our speaking and writing is familiar. Simple words are interesting to the extent of avoiding the repugnance that we all feel toward what is unnatural and high-flown. But the safe general guide to interest is aptness. For *style*, which may be simply defined as interesting words, *is the adaptation of the tone of expression to the thought and feeling expressed, the person expressing, and the audience addressed.*

Study each of the following letters¹ for its style; that is, for the interest in its choice of words as apt to the writer, the recipient, and the occasion. Tell in a few sentences what sort of person you imagine each writer to be from his way of writing. Investigate in a dictionary each word of which you are not sure. Point out any homely words and phrases, and any that seem particularly dignified or elegant. Try the effect of substituting in these cases an elegant word for a homely one, or a homely for an elegant.

Lord Chesterfield to his godson at school with the gift of a book

Saturday morning (January, 1767).

My dear Boy,

This severe weather will not allow my old carcass to go to you, nor your young one to be brought to me, one or other; or probably both might be the worse for it. Tell Dr. Dodd that I hope he will not think me an insolent debtor upon account of this delay.

I send you a book which I think must gratify your love of variety. It is a collection of the most shining thoughts, both of the ancients and of the moderns, compiled by the famous Père Bouhours, a Jesuit, a man of great parts and sound judgment. I endeavor to stock your mind with the most ingenious thoughts of other people, in hopes that they may suggest to you materials for thinking yourself; for an honest man will no more live upon the credit of other people's thoughts than of their fortune. When, therefore, you dip into this book, and any thought pleases you much, ask yourself why it pleases you, and examine whether it is founded upon truth and nature; for nothing else can please at long run. Tinsel false thoughts may impose upon one for a short time, like false money; but sterling coin alone will always and everywhere pass current. God bless you and make you both an honest and an able man, but the former above all things.

CHESTERFIELD.

¹The study may be profitably extended by the use of collections of letters, or of a book of selections such as *Specimen Letters*, selected and edited by Albert S. Cook and Allen R. Benham, Boston, Ginn & Co.

*Thomas Bailey Aldrich to William Winter on the burial of Edwin Booth*¹

PONKAPOG, MASS., June 12, 1893.

Dear WILL,

We reached Mount Auburn a few minutes before sunset. Just as Edwin was laid in the grave, among the fragrant pine-boughs which lined it, and softened its cruelty, the sun went down. I never saw anything of such heart-breaking loveliness as this scene. There in the tender afterglow two or three hundred men and women stood silent, with bowed heads. A single bird, in a nest hidden somewhere near by, twittered from time to time. The soft June air, blowing across the upland, brought with it the scent of syringa blossoms from the slope below. Overhead and among the trees the twilight was gathering. "Good night, sweet Prince!" I said, under my breath, remembering your quotation. Then I thought of the years and years that had been made rich with his presence, and of the years that were to come, — for us not many, surely, — and if there had not been a crowd of people, I would have buried my face in the greensward and wept, as men may not do, and women may. And thus we left him.

Some day, when I come to New York, we must get together in a corner of the Players, and talk about him, — his sorrows and his genius, and his gentle soul.

Ever affectionately,

TOM.

Lady Mary Wortley Montague to her Sister, a letter of travel

ROTTERDAM, Aug. 3. (o. s.), 1716.

I flatter myself, dear sister, that I shall give you some pleasure in letting you know that I have safely passed the sea, though we had the ill fortune of a storm. We were persuaded by the captain of the yacht to set out in a calm, and he pretended there was nothing so easy as to tide it over; but after two days slowly moving the wind blew so hard that none of the sailors could keep their feet, and we were all Sunday night tossed very handsomely. I

¹ From *The Life and Art of Edwin Booth*. By William Winter. Copyright, 1893, by Macmillan & Co.

never saw a man more frightened than the captain. For my part, I have been so lucky as to suffer neither from fear nor from seasickness; though I confess I was so impatient to see myself once more upon dry land that I would not stay till the yacht could get to Rotterdam, but went in the long boat to Helvoetsluys, where we had voitures (carriages) to carry us to the Briel. I was charmed with the neatness of that little town; but my arrival at Rotterdam presented me a new scene of pleasure. All the streets are paved with broad stones; and before many of the meanest artificers' doors are placed seats of various-colored marbles, so neatly kept that I'll assure you I walked almost all over the town yesterday, incognito, in my slippers, without receiving one spot of dirt; and you may see the Dutch maids washing the pavement of the street with more application than ours do our bed-chambers. The town seems so full of people, with such busy faces all in motion, that I can hardly fancy it is not some celebrated fair; but I see it is every day the same. It is certain no town can be more advantageously situated for commerce. Here are seven large canals, on which the merchants' ships come up to the very doors of their houses. The shops and warehouses are of a surprising neatness and magnificence, filled with an incredible quantity of fine merchandise, and so much cheaper than what we see in England that I have much ado to persuade myself I am still so near it. Here is neither dirt nor beggary to be seen. One is not shocked with those loathsome cripples so common in London, nor teased with the importunity of idle fellows and wenches, that choose to be nasty and lazy. The common servants and little shopwomen here are more nicely clean than most of our ladies; and the great variety of neat dresses — every woman dressing her head after her own fashion — is an additional pleasure in seeing the town. You see hitherto I make no complaints, dear sister; and if I continue to like travelling as well as I do at present, I shall not repent my project. It will go a great way in making me satisfied with it if it affords me an opportunity of entertaining you. But it is not from Holland that you must expect a disinterested offer. I can write enough in the style of Rotterdam to tell you plainly in one word that I expect returns

of all the London news. You see I have already learnt to make a good bargain, and that it is not for nothing I will so much as tell you I am

Your affectionate sister.

Byron to Mr. Hodgson

FALMOUTH, June 25, 1809.

My dear HODGSON,

Before this reaches you, Hobhouse, two officers' wives, three children, two waiting-maids, two subalterns for the troops, three Portuguese esquires and domestics, — in all nineteen souls, will have sailed in the Lisbon packet with the noble Captain Kidd. . . This town of Falmouth, as you will partly conjecture, is no great way from the sea. It is defended on the seaside by two castles, St. Maws and Pendennis, extremely well calculated for annoying everybody except an enemy. St. Maws is garrisoned by an able-bodied person of fourscore, a widower. He has the whole command and sole management of six most unmanageable pieces of ordnance, admirably adapted for the destruction of Pendennis, a like tower of strength, on the opposite side of the channel. We have seen St. Maws; but Pendennis they will not let us behold, save at a distance, because Hobhouse and I are suspected of having already taken St. Maws.

Yours faithfully,

NOEL BYRON.

Emerson to Hermann Grimm, a letter of introduction

CONCORD, MASSACHUSETTS, 14 April, 1867.

My dear Mr. GRIMM,

Will you allow me the pleasure of introducing to you a young friend of mine, Mr. William James, a student of medicine at Cambridge? He has lately returned from South America, whither he accompanied Professor Agassiz in his scientific tour in Brazil. He goes now to Berlin with a view to the further prosecution of his studies. His father, Henry James, Esq., an old friend of mine, is a man of rare insight and of brilliant conversation; and I doubt not you will find the son the valued companion that we hold him.

He asks me rather suddenly for this letter, or I should make it the companion of one or two more that have long been due to yourself, and to my friend Gisela Arnim, to whom I pray you to present my affectionate salutations, with the promise to make to her soon a special acknowledgment of her letter, which, though addressed to my daughter, directly concerned me, and of her book, on which I have much to say.

I remain your affectionate debtor,

R. WALDO EMERSON.

HERMANN GRIMM, Esq.

*Dickens to Sheridan Knowles, a soft answer turning away wrath*¹

148, KING'S ROAD, BRIGHTON, 26th May, 1847.

My dear KNOWLES,

I have learned, I hope, from the art we both profess (if you will forgive this classification of myself with you) to respect a man of genius in his mistakes no less than in his triumphs. You have so often read the human heart well that I can readily forgive your reading mine ill, and greatly wronging me by the supposition that any sentiment towards you but honor and respect has ever found a place in it.

You write as few lines which, dying, you would wish to blot, as most men. But if you ever know me better, as I hope you may (the fault shall not be mine if you do not), I know you will be glad to have received the assurance that some part of your letter has been written on the sand, and that the wind has already blown over it.

Faithfully yours always,

CHARLES DICKENS.

JAMES SHERIDAN KNOWLES, Esq.

¹ Apparently Knowles had resented as an affront something said by Dickens concerning his writing, and had written a hot rebuke; but the occasion can be guessed only from the letter itself. Compare the choice of words with that of the following.

Dickens to Thackeray, a letter of thanks

TAVISTOCK HOUSE, Friday Evening, 23rd March, 1855.

My dear THACKERAY,

I have read in *The Times* to-day an account of your last night's lecture, and cannot refrain from assuring you in all truth and earnestness that I am profoundly touched by your generous reference to me. I do not know how to tell you what a glow it spread over my heart. Out of its fulness I do entreat you to believe that I shall never forget your words of commendation. If you could wholly know at once how you have moved me and how you have animated me, you would be the happier, I am very certain.

Faithfully yours ever,

CHARLES DICKENS.

W. M. THACKERAY, Esq.

Thomas Gray to William Mason, a letter of condolence

March 28, 1767.

My dear MASON,

I break in upon you at a moment when we least of all are permitted to disturb our friends, only to say that you are daily and hourly present in my thoughts. If the worst be not yet past, you will neglect and pardon me; but if the last struggle be over, if the poor object of your long anxieties be no longer sensible to your kindness or to her own sufferings, allow me — at least in idea, for what could I do, were I present, more than this? — to sit by you in silence, and pity from my heart, not her who is at rest, but you who lose her. May He who made us, the Master of our pleasures and of our pains, preserve and support you! Adieu.

I have long understood how little you had to hope.

Ever yours,

THOMAS GRAY.

SUMMARY OF THIS CHAPTER

1. The two objects of writing, clearness and interest, are tested by the reader.
2. Clearness is an affair of sentence-form.
3. Clearness is helped by punctuation and capitals.
4. Clearness is an object of forms of courtesy.
5. Interest in general means the putting of what attracted the writer in such a way as to attract the reader; *i.e.*, it depends upon selection and adaptation.
6. Interest is given by specific details.
7. Clearness depends also upon the choice of words.
8. Interest, even more than clearness, depends upon the choice of words.

From the outline above prepare a connected oral recitation of four minutes.

Prepare a fuller connected oral recitation on points 1, 4, and 7; another on 5, 6, and 8.

CHAPTER II

THE PRINCIPLES OF CLEARNESS : EXPLANATION

The themes in connection with this chapter should be explanations (expositions) of two hundred to three hundred words. Argue whenever your explanation seems to need proof; try to be interesting; but keep as your main object to explain clearly. Most of the themes should be first spoken connectedly, then written.

All themes should be written in ink on paper of one prescribed size, and on one side of the sheet. Each sheet should be numbered in the upper right-hand corner, and bear the initials of the writer in the upper left-hand corner. Find out whether the reader prefers the sheets folded (and how) or left flat and held together with manuscript clasps.

1. CLEARNESS STUDIED BEST IN EXPLANATION (EXPOSITION)

WHAT is true for letters is generally true for all writing. To be clear, to be interesting, are objects always; and all the ways of gaining them spring from that root idea of adapting oneself to a reader or hearer. But letters do not pursue these two objects equally. All business letters are concerned more with clearness; all personal letters are concerned more with interest. And as letters are thus naturally divided into two classes, so are all other forms of writing and speaking. Though we may try to be interesting even when our main object is to be clear, and though we must be clear even when our main object is to be interesting, nevertheless one object or the other is our main

object according to the kind of writing. Irving's story of *Rip Van Winkle* is both clear and interesting. It is clear because we understand the life of the Dutch settlers without knowing anything of it beforehand; it is interesting because we are excited to learn how it will turn out, and pleased with each incident on the way. This story, then, aims at both objects. But evidently its main object is the object of story-writing in general, — to be interesting. A manual of geography or history should be both clear and interesting; but of course its main object is to be clear. A little thinking over any dozen familiar books will show that each has one or the other as its main object.

Main Object, Clearness

The business letter on page 21.
 The official book of rules for baseball.
 A textbook of commercial geography.

Photography for Beginners.

The platform of the — party.

Main Object, Interest

The personal letter on page 54
 The newspaper report of a baseball game (?).
 Franklin's autobiography.

David Copperfield.

The Lady of the Lake.

Draw up a similar list with six pieces in each column for comparison on the blackboard.

All the pieces in one column, however different their subjects, are of the same general kind. Those on the left were written to explain or prove; those on the right, to tell a story or describe. The former is known technically as *exposition* or *argument*, according as it is written rather to explain or rather to convince and arouse action; the latter kind is known technically as *description* or *narration*, according as it is written rather to call up images or rather to carry on a story.

Main Object, Clearness

Writing to explain or prove.

Writing for business.

Technical name, exposition, or argument.

Main Object, Interest

Writing to describe or to tell story.

Writing for pleasure.

Technical name, description, or narration.

Such a division does not, of course, rule out interest when we are writing for the business object of clearness, nor rule out clearness when we are writing to arouse pleasant interest; but, by fixing the main object of each kind, it does open the way to study the proper means, as we must now do, in more detail. For each kind, as we learn from the writers who have pursued it most successfully, has its own proper means; its own ways to success. These, then, are (1) *the principles of clearness*, and (2) *the principles of interest*. We can study them best separately by speaking and writing with the attention fixed on the one main object, and by examining those speakers and writers whose attention was fixed in the same direction. *For the first step toward good composition is to know exactly what you are at.* With our minds fixed, then, on clear explanation, let us seek in this kind of writing the principles of clearness.

2. UNITY

Limiting the Subject. — Think of three subjects which you know well enough to explain orally in three or four minutes. The public library? Automobiles? These are too big. You might explain how children use the public library, or discuss the increase of motor-cars for business. Evidently the first step is to choose what you can explain clearly in the time. Every speaker or writer must always, as a condition of success, *limit his subject to his space*. He may, indeed, speak or write without this, but he cannot

speaking or writing successfully. He will be compelled either to stop half-way or to leave his explanation vague. Here are some subjects that can be explained orally in three or four minutes. Do not choose any of them if you prefer one of your own; but learn from them how to limit.

1. What Makes Bread Rise.
 2. Why Leaf-Mold is Warm.
 3. Why Water Pipes Crack in Cold Weather.
 4. The Court of Venice Wronged Shylock (?).
 5. Why We Trade with Brazil.
 6. The New Rules Make Football More Interesting.
 7. The Economy of Automobile Drays.
 8. What Reinforced Concrete is.
 9. The Convenience of Gas Stoves.
 10. Lumbermen are Wasteful.
 11. Driving a Well.
 12. The Use of Collecting Stamps.
 13. The Main Object of Our Girls' Friendly Society.
 14. Why Girls Prefer Factories to Domestic Service.
 15. Handball is Good Exercise.
 16. Bookbinding for Girls.
 17. The Meaning of "all men are created free and equal."
 18. Sunday Baseball for Workmen.
 19. What a Bank Check is For.
 20. The Ugliness of Bill-boards Near the Public Square.
 21. Why Rails Were Laid with a Crack between the Ends.
 22. The Object of Inspecting Milk.
 23. The Idea of the "Block System" on Railroads.
 24. Why Attendance at Grammar School is Compulsory.
 25. We Need an Isolation Hospital for Contagious Diseases.
 26. Jessica Wronged her Father (?).
 27. The Silliness of the Vicar of Wakefield's Daughters.
 28. Italians Make Good Americans.
 29. Why Men Try to Reach the North Pole.
- Other subjects will be found on succeeding pages.

Looking over these topics, notice that some of them are expressed in phrases, some in clauses, some in sentences, and that generally those expressed in sentences are the most definite. Most of the others would gain in definiteness by being put in the same way:

The decay of leaves produces heat.

The phrase "created free and equal" refers to equality before the law.

Our trade with Brazil is a natural exchange of products.

Boobkinding is a profitable craft for girls.

Rails used to be laid so as to allow room for expansion.

The Vicar's daughters are silly.

Therefore, since your first step is to know exactly what you are at, think out your point into a sentence; *i.e.*, before you go on, make your subject clear to your own mind by expressing it in the most definite form. This will save you from wandering or wasting time. *The first step toward clearness should result in fixing the subject as a sentence.*

Developing the Subject within the Limits. — But the object of this limiting is not to say little; it is to say much — as much as you can in your time; it is to give time for full explanation by holding the attention on one well-defined idea.

Gas Stoves are More Convenient than Coal Stoves.

Easier and quicker to light.

Easier to regulate heat.

No fuel to carry, no ashes.

Kettle boils in six minutes.

Toast in five minutes.

Always ready, no waiting.

More comfortable in hot weather.

Boiler attachment.

My experience with steak and potatoes.

Can tell cost exactly; compare coal, ashes, repairs.

Can regulate cost exactly.

Constant heat from coal offset by quick heat from gas, and by having to fill up coal stove, shake down, etc.

Thus the idea is thought out by considering the various ways in which it is true, by instances or examples, by contrast and comparison. Such notes need arrangement to make them fit to speak from; but, before you try to arrange the order, think the subject over and over, look at it this way and that, and see that you have a plenty of examples. Expand first. Then, if you have too much to say, you can choose the best.

We Trade with Brazil by Exchange of Products.

Brazil produces mainly coffee and rubber.

United States uses large quantities of coffee and rubber.

United States manufacturing nation; Brazil not.

United States manufactures rubber goods — overshoes, etc.

United States has no tariff on rubber and coffee; but

Brazil has tariff on our manufactures; not fair.

In United States everybody drinks coffee and wears rubbers.

Brazil needs clothing, etc., tools, flour.

United States ought to have more ships to Brazil.

Compare Argentina — main products there wool, wheat, and hides; same as ours except manufactures. Hence not so easy to trade.

This is thought out in the same general ways; *i.e.*, by instances, by contrast, etc. But those notes about the Brazilian tariff and the number of our ships — do they help to show why we trade with Brazil? No. Therefore they ought to be struck out. In trying to expand, it is easy to pass the limits set at the beginning. There is no harm in this; for notes must always be tested afterwards by the subject sentence, and this will tell what to omit. Think as freely and fully as you can; but, before you speak,

test all your notes by seeing that each one really helps to bring out the idea of the subject sentence. Leave the rest for another theme. Don't try two things at once.

We Trade with Brazil by Exchange of Products.

(A teacher's oral explanation)

You know more than you think about what the geography calls exchange of products (*announcement of subject*). If George has two kites and no sling-shot, while John has no kites and two sling-shots, those boys will gain by trading. Each can exchange what he has for what he has not. Both will be better off by exchange of products. But if they both have kites and want sling-shots, they can't trade with each other. Each must trade with some other boy (*illustration*). It is just so with countries. A country naturally chooses to trade with that other country which has what it wants and wants what it has (*iteration in another form*). Of course the trade of countries is carried on by means of money; but this money is only the most convenient means of trade. The trade itself is the exchange of one thing for another thing (*correcting a false impression*). Watch a steamship from Brazil unloading at Erie Basin (*instance*). What are the stevedores wheeling into the warehouses? Big pieces of crude rubber and bags of coffee. Those are the chief products of Brazil. Neither of them is produced in this country. Both are constantly used here. How many of you had coffee on the breakfast table this morning (*instance, brought home*)? I thought so. Most American families use coffee. As I came in this rainy morning, I found the cloak-room floor half covered with your rubbers. If you will think how many schools are in this city alone, you will see how many of our factories are constantly turning Brazilian rubber into overshoes. Now if you could watch that same ship loading to go back to Brazil, you would find the donkey-engine lowering into the hold great bales of cloth, cases of ready-made clothing, crates of tools (*instance carried out*). Those are our products. We are a manufacturing country. We want what Brazil has; we have what Brazil wants. We trade with Brazil because we can exchange products (*iteration*).

After you have thought out a subject in this way with notes, speak it at home, if possible to some one of your family. This will accustom you to the sound of your own voice in steady explanation, will let you see whether you have made the subject clear in the allotted time, and will insure good practice even if you are not called on in class. When you speak it in class, speak it, not merely to the teacher, but to the class. Look your classmates in the eye and try to make them understand fully.

Then, as a separate exercise afterward, write out your explanation and hand it in as a theme. Follow the same method; use the same words whenever you remember them easily; but revise your sentences according to pages 4-9.

Development by Instances. — To develop an explanation clearly from the sentence that sums up its main idea, we use instances, contrast, iteration, or illustration. Each of these ways is worth separate attention.

✓ *In the French country men are used to long walks.*

In the country, the men are not afraid of a long walk. One of my neighbours would go fifteen miles and back with no other companions than his walking-stick and a little dog, though he had a carriage; and I know another who sometimes does his twenty miles a day, and very often forty. I also know a surgeon who has a practice which extends over a large tract of hilly country, thinly inhabited, and yet he will not keep a horse, but prefers walking, as more convenient for short cuts. His average day will cover between ten and thirty miles. My boys often go to stay with some young friends of theirs in a wild out-of-the-way village, and during these visits they make daily pedestrian excursions, in which the master of the house often joins them. These excursions often extend to fifteen or twenty miles by the time they get back to the village. I remember meeting a friend of ours, an old gentleman, not yet enfeebled by time, who had given us a rendezvous at a certain large pond or lake amongst the hills. It

was at least forty miles from his own house; but he came on foot, and brought three young men with him. They had slept one night on the way, and rambled through a wild country botanizing and geologizing. They went back by another round, exactly in the same manner, guiding themselves by the ordnance map and a mariner's compass, a necessary precaution in crossing broad patches of forest. There is a great deal of this vigorous temper in the real country.

—PHILIP GILBERT HAMERTON, *Round My House*, Chapter vii.

This explanation is carried on by instances, or examples. The neighbor, the doctor, the sons, the old gentleman and his companions, — all are examples of a habit of walking. This is the simplest way of explanation and, because it is usually necessary, one of the best.

Development by Contrast. — The following is carried on in the same way, and also by contrast:

You cannot be a real sailor till you live in the fore-castle.

In the midst of this state of things my messmate and I petitioned the captain for leave to shift our berths from the steerage, where we had previously lived, into the fore-castle. This, to our delight, was granted, and we turned in to bunk and mess with the crew forward. We now began to feel like sailors, as we never fully did when we were in the steerage. While there, however useful and active you may be, you are but a mongrel, a sort of afterguard and "ship's cousin." You are immediately under the eye of the officers, cannot dance, sing, play, smoke, make a noise, or growl, or take any other sailor's pleasure. You live with the steward, who is usually a go-between; and the crew never feel as though you were one of them. But if you live in the fore-castle, you are "as independent as a wood-sawyer's clerk" and are a sailor. You hear sailors' talk, learn their ways, their peculiarities of feeling as well as of speaking and acting, and, moreover, pick up a great deal of curious and useful information in seamanship, ship's customs, foreign countries, etc., from their long yarns and equally long disputes. No man can be a sailor, or know what

sailors are, unless he has lived in the fore-castle with them, turned in and out with them, and eaten from the common "kid." After I had been a week there, nothing would have tempted me to go back to my old berth; and never afterwards, even in the worst of weather, even in a close and leaking fore-castle off Cape Horn, did I for a moment wish myself in the steerage.

— RICHARD HENRY DANA, JR.,

Two Years before the Mast, Chapter viii.

Are the people in your neighborhood accustomed to long walks? Think of any instances you have observed. If you find no such habit, make a contrast with the French habit explained above. How does your doctor go about? How do your friends take their exercise? Why is walking less common than in the French country? Is it because of the prevalence of bicycles? of trolley cars? Are long walks less common than in your father's youth? Prepare in this way, *i.e.*, by instances and contrast, a short oral address on the following:

We are (not) used to long walks.

Revise this afterwards as a written theme.

Development by Iteration. — *The French are brought up to easy and simple manners.*

French children are generally well-mannered. They are seldom rough or boisterous. Their almost constant contact with their mother and their mother's friends gives them, from their babyhood, a glimmering of the sort of voice and attitude which ought to be adopted before strangers. . . . One of the great causes of the ease with which, as a whole, the French act toward each other lies in this early training. A boy of ten knows perfectly that, if his father meets a lady in the street, and stops to speak to her, his own duty is to take his hat off and to stand bare-headed. He knows that it would be rude to shake hands with anybody, man or woman, without uncovering. His mother tells him, his father sets him the example; so it seems quite natural to him. He does it simply, without loutishness or shyness. In the same way he learns to be cool and self-collected even if

anything occurs which draws attention to him in a crowd. If he drops his book at church and has to leave his place to pick it up, he does not blush; he sees no reason why he should. The girls do not giggle and look foolish if their hair comes down or their hats fall off; they rearrange themselves with perfect calm and self-possession, utterly unconscious that anyone is looking at them, and indifferent if they know it. From these early habits they grow up to regard all ordinary movements as being permissible in public. This is why a Frenchwoman takes off her bonnet and smooths her hair before the glass in a railway waiting-room or a restaurant, or regulates her skirts, or puts in order her baby's inmost clothes before fifty people. In her eyes all such things are so natural, so matter-of-course, that she has no kind of motive for making any fuss about them. She does them just as if she were at home; and she is right. The advantage of being educated with views of this sort is immense. The views themselves are wise and practical; and their realization has a marked effect on the development of simplicity and naturalness in manners.

— PHILIP GILBERT HAMERTON, *French Home Life*, Chapter v.

This also is developed by instances. Contrast is implied; for when we read that the French boy does not blush when he drops a book, or a French girl giggle when her hair comes down, we think at once of American boys and girls who do blush and giggle on like occasions. Further, the explanation is helped by a third method. The second sentence repeats the idea of the first, as if the writer had said: French children are well-mannered. They are not ill-mannered. But the statement is not merely repeated; it is enforced by putting it in another way. For this useful means of clearness in explaining, the common name is *iteration*. "He does not blush; he sees no reason why he should." "She has no kind of motive for making any fuss about them. She does them just as if she were at home." In each of these cases the second statement, though it is a repetition, makes the first clearer by putting it in another light. Be-

sides, by saying a thing twice, a writer, and still more a speaker, allows time for it to sink in. Be sure that your hearers grasp what you have said. Iteration is more important in spoken explanation than in written; but in both it is a useful means of clearness.

Development by Illustration. — Like the ancient history of man, the ancient history of the earth is studied by digging.

The work of the geologist in determining the successive ages of the world is in general principles precisely like that of the student who concerns himself with the ancient history of man. The likeness will be perhaps clearer to the reader if we suppose him to undertake an inquiry concerning the ancient inhabitants of North America. All over the Mississippi Valley, and in other parts of the country, he will find scattered the plentiful remains of the Indians who were recently expelled by the whites. Arrow-heads, stone hammers and hatchets, here and there bits of pottery, or ancient graves, show the recent possession of the country by savages. Now and then, below the level of the upper or soil stratum, we find remains of a slightly more cultivated tribe of aborigines, the Mound-builders and those folk who made the great fortifications of the Mississippi Valley. It is easy to prove that these Mound-builders were earlier than the tribes known to the whites, by the fact that their remains lie generally below the level occupied by the fragments of worked stone and earthenware left by the later ordinary Indians who were known to our people. Now let us suppose that the observer has a mind to dig deeper, and to pass altogether through the soil coating. He will, at most points in the Mississippi Valley, — indeed, over much of the area of the continent, — come at once upon rocks which are full of fossils. The stone in which they are held is laid in successive layers, which are evidently deposited one after the other, each carrying, in general, numerous remains of animals or plants. He knows these remains to have once been living, by their general likeness to the creatures of to-day; but when he proceeds to compare them with the forms now dwelling on sea and land, he finds that they differ

in a very striking way from those now in existence. Probably not a single species will be of the same sort as those now dwelling on the earth. In a word, he has found written in the great stone book a chapter in the history of the earth which came long before the present stage in that history.

— N. S. SHALER, *The Story of Our Continent*, Chapter ii.

Here the explanation is carried on mainly by *comparison*, or *illustration*. An instance, or example, is drawn from the subject itself. The study of fossils is an instance of the study of geology. An illustration is drawn from another subject which is similar. The study of fossil animals is *like* the study of buried pottery. The illustration helps us to understand the study of geology by comparing it to the study of ancient history. An instance is drawn from within the subject; an illustration is drawn from outside. The following is developed in the same way.

The education of history is like the education of travel.

The effect of historical reading is analogous, in many respects, to that produced by foreign travel. The student, like the tourist, is transported into a new state of society. He sees new fashions. He hears new modes of expression. His mind is enlarged by contemplating the wide diversities of laws, of morals, and of manners. But men may travel far, and return with minds as contracted as if they had never stirred from their own market-town. In the same manner, men may know the dates of many battles, and the genealogies of many royal houses, and yet be no wiser. Most people look at past times as princes look at foreign countries. More than one illustrious stranger has landed on our island amidst the shouts of a mob, has dined with the king, has hunted with the master of the stag-hounds, has seen the Guards reviewed and a Knight of the Garter installed, has cantered along Regent Street, has visited St. Paul's and noted down its dimensions, and has then departed, thinking that he has seen England. He has, in fact, seen a few public buildings, public men, and public cere-

monies. But of the vast and complex system of society, of the fine shades of national character, of the practical operation of government and laws, he knows nothing. He who would understand these things rightly must not confine his observations to palaces and solemn days. He must see ordinary men as they appear in their ordinary business and in their ordinary pleasures. He must mingle in the crowds of the exchange and the coffee-house. He must obtain admittance to the convivial table and the domestic hearth. He must bear with vulgar expressions. He must not shrink from exploring even the retreats of misery. He who wishes to understand the condition of mankind in former ages must proceed on the same principle. If he attends only to public transactions, to wars, congresses, and debates, his studies will be as unprofitable as the travels of those imperial, royal, and serene sovereigns who form their judgment of our island from having gone in state to a few fine sights, and from having held formal conference with a few great officers.

—MACAULAY, *Essay on History*.

The Habit of Questioning. — No one of these four means of development — instances, contrast, iteration, illustration — can be called better than the others; and no one can often be used alone. Clearness depends so often on fullness that we explain now in this way, now in that. Some good explanations use all four; and before choosing, it is wise to try all. Whichever may seem best for the audience, all are good for the preparation of the speaker or writer. This preparation is the questioning of one's own mind. What is this that I am trying to explain? In what other form may I state my definition (iteration)? Is that instance sufficient? What is this like (illustration)? Unlike or opposite to (contrast)? So the subject is developed by putting oneself in the reader's place, by asking oneself the questions that would naturally be asked by the audience.

This questioning of oneself should begin even with the choice

of a subject. *Good Roads* — WHAT is a good road? A stone or macadam road. Is that the only good road? Should all roads be macadamized? No, that would cost more than the county could afford. Besides, gravel roads are quite good enough for light traffic. But what is a macadam road? HOW is it made? I don't know exactly; but next time I will watch. How much does it cost per mile? Should we have to haul the stone far? Again I don't know; but I can easily find out from Mr. B. Meantime this aspect of the subject must wait. But I know that *our county needs more stone roads*. WHY? Because Mr. C.'s milk wagon broke a spring in a mud-hole last week (*instance*). Because the roads across the state line, in Massachusetts, put ours to shame (*contrast*). Because traffic is increasing along the West Road. Here, probably, is the best subject for me. *The West Road should be macadamized to the Massachusetts line*. But why are our roads bad? Lack of public spirit? Large use of electric express? Why should we make them better? What gain would come to the town from macadamizing the West Road? Are the owners of automobiles the people mainly interested?)

What? How? Why? Like what? Contrasted to what? Such questions help to think a subject through, to limit wisely, to develop fully. For the present, choose subjects about which you already know enough to answer such questions. Later practice should include questioning of others in conversation, and finally questioning of books. For a good explanation or argument is a satisfactory answer to natural questions; and a good deal of our education comes from looking for the reasons of things.

Who is responsible for keeping the streets of your block clean? Does he keep them clean? How is the cleaning provided? How many men are usually at work? If you live in a city prepare a theme on clean streets instead of good roads. Bring to class six questions on this or some similar topic: the fire department, the police, the hospitals, the park service.

In these ways think out a brief oral address on a subject sug-

gested by one of the following. Notice that in each case the topic suggested is too broad and vague to be discussed until you have by reflection settled upon some single view of it which you can express in a single guiding sentence.

Revise your address as a written theme.

- | | |
|---|---|
| 1. The Reading of Newspapers
(This may suggest, e.g., <i>A girl should learn how to read the morning paper in fifteen minutes.</i>) | 12. The Gypsy Moth. |
| 2. Good Manners. | 13. School Gardens. |
| 3. The Reading of Poetry in School. | 14. A High School Play. |
| 4. College after High School. | 15. The Care of a Cow. |
| 5. A Hospital. | 16. The Out-door Cure for Tuberculosis. |
| 6. Manual Training. | 17. Irrigation. |

| | 23. Pure Water. |
| | 24. Squirrels. |
| | 25. Japanese on the Pacific Coast. |
| | 26. A Current Event. |

Listen attentively to each oral explanation in class so as to be ready, when the speaker has finished, for a connected oral report as follows:

1. What did he say? (the subject in a complete sentence).
2. How did he say it? (development by instances, illustration, etc.).
3. What should he have said further? (lack of iteration, or omission of something important for clear understanding).

Practice in listening is of great importance, not only for debate (See Part II, page 283), but also in general for developing alertness and quickness of mind and readiness of expression. Such impromptu oral reports should be continued throughout the study of this chapter. At first take a few notes to fix attention and

they were toiling through sand. A similar illusion seems to haunt nations through every stage of the long progress from poverty and barbarism to the highest degrees of opulence and civilization. But, if we resolutely chase the mirage backward, we shall find it recede before us into the regions of fabulous antiquity. It is now the fashion to place the golden age of England in times when noblemen were destitute of comforts the want of which would be intolerable to a modern footman, when farmers and shopkeepers breakfasted on loaves the very sight of which would raise a riot in a modern workhouse, when to have a clean shirt once a week was a privilege reserved to the higher class of gentry, when men died faster in the purest country air than they now die in the most pestilential lanes of our towns, and when men died faster in the lanes of our towns than they now die on the coast of Guiana. We too shall, in our turn, be outstripped, and in our turn be envied. It may well be, in the twentieth century, that the peasant of Dorsetshire may think himself miserably paid with twenty shillings a week; that the carpenter at Greenwich may receive ten shillings a day; that labouring men may be as little used to dine without meat as they now are to eat rye bread; that sanitary police and medical discoveries may have added several more years to the average length of human life; that numerous comforts and luxuries which are now unknown, or confined to a few, may be within the reach of every diligent and thrifty working man. And yet it may then be the mode to assert that the increase of wealth and the progress of science have benefited the few at the expense of the many, and to talk of the reign of Queen Victoria as the time when England was truly merry England, when all classes were bound together by brotherly sympathy, when the rich did not grind the faces of the poor, and when the poor did not envy the splendour of the rich.

—MACAULAY, *History of England*, end of Chapter iii.

IV

Death is at all times solemn, but never so much so as at sea. A man dies on shore; his body remains with his friends, and "the mourners go about the streets"; but when a man falls overboard

at sea and is lost, there is a suddenness in the event, and a difficulty in realizing it, which give to it an air of awful mystery. A man dies on shore; you follow his body to the grave, and a stone marks the spot. You are often prepared for the event. There is always something which helps you to realize it when it happens and to recall it when it has passed. A man is shot down by your side in battle; and the mangled body remains an object and a real evidence. But at sea the man is near you, at your side; you hear his voice; and in an instant he is gone, and nothing but a vacancy shows his loss. Then, too, at sea, to use a homely but expressive phrase, you miss a man so much. A dozen men are shut up together in a little bark upon the wide, wide sea, and for months and months see no forms and hear no voices but their own; and one is suddenly taken from among them, and they miss him at every turn. It is like losing a limb. There are no new faces or new scenes to fill up the gap. There is always an empty berth in the fore-castle, and one man wanting when the small night watch is mustered. There is one less to take the wheel, and one less to "lay out" with you upon the yard. You miss his form and the sound of his voice, for habit had made them almost necessary to you, and each of your senses feels the loss.

— RICHARD HENRY DANA, JR.,

Two Years Before the Mast, Chapter vi.

Learn the following by heart:—

Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here,

have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here; but it can never forget what they did here. It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us, — that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth.

— LINCOLN, *Gettysburg Address*.

The means of clearness thus far discussed in this chapter all rest upon one principle, the principle of staying by a single idea until it is thoroughly understood, the principle commonly called unity.

3. EMPHASIS

Study of the principle of unity leads at once to a second principle, the principle of *emphasis*. Unity bids us set up one sentence as our guide throughout. To develop clearly the controlling idea for which this sentence stands, we often use iteration. We repeat the main idea in various forms for the sake of dwelling upon it; and we are especially careful to repeat it in some striking manner at the end. In a word, we take care that our point shall be *emphasized*. By iteration we give it space; by ending with it we give it prominence. These are the two ways of securing clearness by emphasis.

Proportioning the Space. — Emphasis of space, emphasis by dwelling most upon what enforces the point most, is clear in Lincoln's Gettysburg speech above. *The best honor that we can pay these dead soldiers is to preserve the*

Union for which they died, — every part of the speech helps to bring out this one main idea; *i.e.*, the speech has unity. But not every part helps equally. Some parts enforce the subject directly; others help indirectly by preparing the way. The former Lincoln emphasized by giving them more space; the latter he passed over lightly. In urging his message for the present and the future he referred to the past. This prepared his hearers by reminding them of the great historic principle on which his message was based. But since reference to the past helped him indirectly, since for his purpose it was merely preparatory, he did not dwell on it. He passed at once to the present, and he dwelt upon that only to show its bearing upon the future. The past he disposes of in the first sentence. The second sentence, turning to the present, begins at once to look toward his message for the future, “testing whether that nation . . . can long endure.” The third and fourth sentences deal with the present in the same way, looking again toward his message for the future — “that that nation might live.” The rest of the speech, more than one half, beginning “But . . . *we*,” dwells upon his message directly. First negatively, and then positively, it urges his hearers to devote themselves. In a word the speech is well proportioned.

Now suppose this due emphasis of space changed. Suppose the speech, keeping the same number of words, to have dwelt longer on the past, and on the present more for itself than for his message.

Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal. This principle of democratic free government is our heritage. To establish it, many of the fathers laid down their lives; to secure it, the others united under the Constitution. Now we are engaged in a great civil war, testing whether this nation, or any nation, so conceived

and so dedicated, can long endure. For that is the meaning of this terrible struggle. The older nations of Europe long ago prophesied that such a government could not endure. Democracy is on trial. We are met on a great battle-field of that war. The ground upon which we stand trembled with the shock of armies. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. Where they fought, there we secure their memory and mark our gratitude. But in a larger sense we cannot dedicate, we cannot consecrate, we cannot hallow, this ground. The brave men, living and dead, who struggled here, have consecrated it far beyond our power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced.

The obvious inferiority of this form is due partly, of course, to the substitution of other words for Lincoln's; but it is due mainly to the throwing of the whole out of proportion. If Lincoln himself had arranged his space so, however eloquent his words, he would have made his speech weaker. His clearness of thought and his training in public address led him to pass rapidly over parts which, however important they might be for another purpose, were for his present purpose subordinate, and to spend upon that present purpose the greater part of his time. He dwelt, not upon the past, nor upon the present for itself, but upon the deep significance for the future. He dwelt, not upon his preparation, but upon his point. Every speech or essay in real life must be made to fit a pretty definite space. If, then, the speaker emphasizes his subordinate parts, he sacrifices his main part. Even if his speech have unity, it may fail from faulty emphasis. Lincoln decided to make a very brief, concise speech. In the time that he set for himself he wished to impress the message of responsibility for the

future of the Union. He wished his hearers to remember the glory of the past and the solemnity of the present mainly as calling for devotion in the future. This intention is exactly carried out in the proportioning of his little space. He deliberately keeps down the one, that he may dwell upon the other. The principle of unity says, What does not bear on the subject should be left out. The principle of emphasis adds, *What bears upon the subject most directly should have most space.*

This means first of all, since your themes are short, cut down the introduction. Come to your point quickly, that you may have time to develop it fully. Secondly, bring everything to bear upon your point. If an example has some features which, though interesting in themselves, will not make your point clearer, do not hesitate to omit these. Be as interesting as you know how to be; but be interesting on the point. If you use an illustration, be sure that it will really make the whole clearer. Never dwell upon an illustration because it is pretty in itself. Usually let contrast be brief; for if you spend much time in showing what a thing is not, you may have too little to show directly what it is. In all these ways cultivate a habit of measuring your space.

✓ *Wind is due to difference of temperature.*

(First form)

Wind is a mysterious thing. It can be felt and heard, but it can never be seen. Wind is air in motion; but what makes the air move? Some winds are strong enough to turn umbrellas inside out and make a bicyclist work as if he were going up a steep hill; others are so gentle that we can hardly feel them; but we cannot see anything to make them strong or gentle, because we cannot see anything to make them at all. But, like some other things that seem mysterious, winds can be explained. Some cold winter day, when the air is so still that you cannot feel it moving at

all, come into a warm room and open the window a little. Hold your hand against the crack, and you will feel the air rushing against your hand. That is what we call a draft; and a wind is nothing but a big draft. If you go out to the barn, where the air is as cold inside as it is outside, and hold your hand against a window crack, you will feel no wind at all. There is nothing to make one. The temperature is the same within and without. Air is set in motion by some difference of temperature. When the atmosphere that surrounds our earth becomes heated in a certain area, it expands and rises and colder air moves in from some less heated spot. So there are regular winds, called trade winds, blowing over a large area just because some countries are warmer than others. Other winds blow only for a short time or a short space because they come from some sudden change of temperature. Such is the wind caused by a great fire like the one in Baltimore. If you put some water in a glass retort over a flame and watch it closely, you can soon see it move round and round from bottom to top and top to bottom. The water at the bottom, nearest the flame, expands first and sends up bubbles of gas. The colder water at the top moves down to take its place, until the whole is dancing and bubbling and sending out puffs of steam. These currents made by heat in water are like the currents made by heat in air.

This theme, though it keeps the principle of unity, violates the principle of emphasis. All its parts bear more or less on the subject; but those which are most important, as bearing most directly, have no more space than those whose importance is much less. The revision below was made on the principle of emphasis. It keeps the same length. Compare the two as to proportion of space.

Wind is due to difference of temperature.

(Second form, revised for emphasis)

What makes the wind blow? However much we hear it and feel it, we can never see it or see what makes it. So we need to

investigate. Some cold winter day, when the air is so still that you say there is no wind at all, come into a warm room and open the window a little. Hold your hand against the crack, and you will feel the air rushing in. That is what we call a draft, and a wind is nothing but a big draft. If you hold your hand in the same way against a window crack in the barn, where the air inside is as cold as the air outside, you will feel no wind at all. Air is set in motion by difference of temperature; and air in motion is wind. The same thing happens in water; only there we can see it. If you heat some water in a glass retort, watching it closely, you can soon see it move round and round from bottom to top and top to bottom. The water at the bottom, nearest the heat, expands first and sends up bubbles of gas. The colder water at the top moves down to take its place, until the whole is heated alike. These currents made by heat in water are like the currents made by heat in air. In other words, they are like wind. When the air over our town is heated by the sun in summer, if the air over the ocean is cooler, pretty soon it comes in to fill the place of the expanding and rising hot air, and we have a sea breeze. A breeze is a light wind. If the difference of temperature is great or sudden and continuous, we have a heavy wind, such as is caused by a conflagration like the Baltimore fire. So in general, whenever the atmosphere that surrounds our earth becomes more heated over one area than over another, it makes room for the colder air to come in from the less heated area. This colder air is heated in turn; more cold air moves in; and so a regular current of air is set up, — in other words, a wind. The parts of the earth's surface near the equator are warmer than the parts farther away. So there are constant winds, called trade winds, blowing over a large area because some countries are always warmer than others. Thus it is plain that all winds, whether strong or gentle, whether local or general, are set in motion by differences of temperature.

Iterating at the End. — This revision follows also the other means of emphasis by ending with an iteration of the point. For emphasis may be secured, not only by due

proportion of space, but also by prominence of position. The most prominent position is the end. Whatever is said last sticks in the mind, partly from the very fact of its coming last, partly from our natural expectation of hearing at the end the result of the whole. Therefore end always with the point. This final iteration of the point may be, as in the theme just above, a summary; or it may be, as in Lincoln's great speech, the largest and strongest statement, — "here highly resolve that government of the people, by the people, and for the people, shall not perish from the earth." The latter form is generally the more emphatic, especially in a speech; but either satisfies everybody's natural desire for a definite conclusion.

Without such a close even a theme otherwise good loses much of its force. It seems, instead of concluding, merely to falter and stop. Readers, and hearers still more, are likely to think the whole is weak if the end is weak. They are not satisfied; they may even forget the point. The first form of the theme above on wind fails to be clear, because it ends lamely with an illustration. Without its title it would by no means be sure of making a reader understand what it all amounted to. That is what every one wishes to know surely at the end, — what it all amounts to. What you wish everybody to remember as the gist of the whole, put at the end.

4. COHERENCE

The third principle of clearness in composition is the principle of *order*, or *coherence*. The principle of unity holds each part to a single point; the principle of emphasis spaces each part according to its value, and insists upon a clear, strong ending; the principle of order or coherence puts each part in such a place as will make the whole easy to follow. A composition is coherent when the people that

listen to it, or read it, follow it readily. "I can't follow you" — when a hearer says that, or a reader thinks it, the composition is incoherent. You must arrange so that the people you are addressing will go on as fast as you do, will be with you at every stage.

Though there is no one fixed order, best for all occasions, there are some helpful general guides. For instance, we have already seen (page 76) that the first sentence is often a statement of the subject, and that the last sentence (page 85) is usually an iteration. But what requires care in coherence is the body of the composition; and here the principle may be applied generally by considering the object. The object of this kind of writing is to explain or persuade. For this purpose it is generally best to put first what your audience knows already or can grasp most readily, to put next whichever of your parts is most readily connected with this, and so on to lead from the known to the unknown, from the smaller to the larger, from the easier to the harder, — in a word, to follow the order of difficulty. Coherence, then, means in general, make each part prepare for the next.

Beginning where the Audience is. — How to begin and how to go on, — these are the practical questions of coherence. The answer to both will be helped by remembering the maxim, Put yourself in his place. In the light of this the questions become more definite: How shall I begin so as to prepare my hearers for the subject? and, What order of parts will make it easiest for them to go on with me? The beginning of a short theme had better take hold of the subject at once; but it should aim also to take hold of the audience. Try to take hold of both at once. Try at the same time to catch attention and to direct it to the subject. The first form of the theme on wind (page 83) catches the attention of the audience by suggesting a mystery in some-

thing familiar; but it is slow in directing the attention to the subject. It spends too much time in talking about the force of winds before coming to the real point, their cause. The beginning of the second form is just as good for catching attention, and much better for directing it. It turns the attention at once to the subject. Think of a beginning that will both catch the attention by referring to something familiar and at the same time direct the attention to the subject.

Look back over your themes to see whether they take hold, in this way, of the audience and the subject. When you find one that does not, write a new beginning. Criticize the beginnings of a number of old themes read aloud in class. Look back over the beginnings of the passages quoted in this chapter. Some of them, since they are detached from their context, really need new beginnings to make them effective by themselves. Selecting one of which this seems to be true, write such a new opening sentence for it as will make it take hold better of your class. Others of the passages begin well as they stand. Point out one of these, and show why.

Leading the Audience Step by Step. — The next question is how to go on. Look again at the theme on wind (page 85). The revision for emphasis has also improved its coherence. The illustration of boiling water and the example of trade winds have been transposed. Why does this change of order make the whole clearer? Because now we pass more readily from the simple instance of a draft to the simple illustration of boiling water, which at once makes us see more clearly how heat makes a current. And the Baltimore fire is more effective before the trade winds because it is at once more marked and so limited in its area that the rise and fall of the current can be easily observed. Thus we can grasp its significance more readily. Having grasped this instance, we are readier to comprehend the trade winds than we should have been if they had come

first. The revised order of this theme, then, iteration excluded, is:

1. A raising of the question.
2. A simple, familiar instance, with a contrast (a draft).
3. A simple illustration to enforce it (boiling water).
4. Another instance, larger, but still familiar (a sea breeze).
5. A third instance, very marked (the Baltimore fire).
6. The largest, most general instance (trade-winds).

The theme is easier to follow because it has a more careful plan.

Plan. — For coherence demands a plan. The order in which thoughts on the subject come into one's head is not at all likely to be the best order for putting the whole before some one else. What comes to mind first may find its place in the theme last or midway. Our thoughts throng and wander; our speech must be single and connected. Therefore the only way is first to jot down brief notes of our thoughts as they come, and then to arrange these notes according to a plan.

And this plan had better be written. It need not be written in many words; but it will probably be more definite if it is set down on paper. The order of the theme on wind may be indicated very briefly:

1. Draft at window — current from difference of temperature.
2. Boiling water — current from difference of temperature.
3. Sea breeze, air cooler over water.
4. Conflagration, violent change.
5. Trade winds, large, regular, from tropics.

That would mean little to any one else; but to the writer it might be enough as a memorandum to speak or write from; for it indicates what is the only vital concern — the order. Indeed, after once settling the order, a speaker can

gradually accustom himself to remember it without having it in his hand. But he can never gain or keep this confidence unless he always fixes his plan first; and the best way to fix it in most cases is to put it down in black and white. No one can speak with confidence, or make his hearers or readers follow, unless he is quite sure what to say next. First, jot down thoughts on the subject as they come; then decide what order will bring these out most clearly and strongly, and jot this order down; then speak or write fully and freely according to this plan. See if plan-making, as it grows firmer by habit, does not help you to think more clearly, to speak with more confidence, and to be more effective on others.

The oral criticisms prescribed above (page 75) may now be expanded as follows:

1. What main point did he fix? (Give the subject sentence and tell whether it was announced.)

2. How did he take hold? (What was the method of introduction?)

3. How did he go on? (*a.* method of development, by example, illustration, etc.; *b.* order of points.)

4. How did he bring home? (*a.* final iteration for emphasis. *b.* use of familiar, interesting words. See page 43.)

Try now gradually to dispense with notes. The report may be kept in clear coherence by following the four points above in order.

5. PRECISION, THE CHOICE OF WORDS FOR CLEARNESS

Clearness in words comes from choosing a word in good use (38) which fits the place. But suppose the fitting word cannot be recalled. That, to be sure, happens to us all sometimes, and to inexperienced writers very often; and it opens a further use of the dictionary. The dictionary

is there, not merely to indicate the spelling, pronunciation and use of words that we know already, but also to show us those words, unknown to us or half known, of which we realize the need as we progress in command of language. Suppose you wish a word to describe the action of a skilled workman who is both quick and expert.

He works quickly.

That is only half your idea. *Quick* the dictionary explains as follows: "done or occurring in a short time, active, sprightly, ready, swift, nimble." Of all these evidently the nearest are *ready* and *nimble*. Which shall it be? Investigate both in the dictionary.

ready, prepared, quick, prompt, not embarrassed, not hesitating, willing, disposed, easy, expert, skilful, etc.

nimble, light and quick in motion, active, brisk, expert, etc.

Apparently the most precise word of the three for this case is *nimble*, each of the others, *quick* and *ready*, being more general.

He works nimbly.

That means that his action is both quick and expert.

Synonyms. — This simple case shows what to seek and how to find it. Seek the most definite or precise word. Find it by choosing among the defining words given in the dictionary. These defining words are called *synonyms*. Synonyms are words having the same general idea, but different particular applications. Every large dictionary gives a list of synonyms as part of the definition of every common word. Thus under *quick* I find in my dictionary, at the end of the definition:

SYN. Swift, rapid, speedy, expeditious, ready, prompt, active, hasty, brisk, nimble, agile, sprightly, living, alive, lively.

All those words have the general meaning that you wish.

From among them you choose the one nearest to your particular shade of meaning. Some you can reject at once. *Hasty* is not at all what you mean, nor *living*, *alive*, *lively*. *Swift*, *rapid*, *expeditious*, *prompt*, *active*, *brisk*, all lack something. "*Nimble*; that is the word I was trying to think of," perhaps you say; or perhaps you are not sure till you have investigated both *nimble* and *ready*. In this choice you will often be helped by the passages quoted in the dictionary to show how the word is used by standard authors. In cases of doubt refer in the library to one of the special books of synonyms, such as Smith's *Synonyms Discriminated*. Practically, then, clearness in words is gained by choosing among synonyms.

Such choosing results in a habit of precision. That is valuable for more than writing; it is a gain in one's whole education; but writing is the most direct means. And while such use of the dictionary sharpens one's knowledge and expression, it also widens them. While it gives precision, it also gives range of vocabulary. *Quick* is a common word. Did you know that it meant *alive*? That was its earliest meaning, and explains the phrases *cut to the quick* and *the quick and the dead*. Most of its synonyms also are common words; but have you ever used *agile*? When would you use *expeditious*? You will find some clue to either in its derivation. So one word leads to another; the idea is enlarged by being viewed in various aspects; and new words start new ideas. In short, by the pursuit of precision one's vocabulary is not merely sharpened; it is also enlarged. The vocabulary of a lazy mind is both vague and small. An active mind, while it sharpens old tools, is continually finding new ones.

For a language is not a set of fixed symbols, each corresponding to one thing, idea, emotion, or action, and to no other. Almost any common idea is represented by several,

perhaps many, words; and of these words some apply also to other ideas. A word once applied to one idea has been gradually extended to another; or conversely, a word once applied to a whole class has come to be limited to a single thing. Again, an idea, as it is developed in new aspects, associates to itself other words. So language grows; and so our words are not merely single signs with no other connection, but rather groups clustering about a central idea of which each emphasizes some one part or aspect more than another. So precision comes from choosing out of a group the word that most nearly expresses the desired shade of meaning.

QUICK

alive

lively

hasty

active

brisk

prompt

nimble

READY

prepared

eager

dexterous

expert

And the constant overlapping of groups, as in the diagram above, though at first it increases the labor of choice, also increases its profit. From among the many words that surround an idea, that one must be chosen which comes nearest to the particular application desired; and this choosing of the right word for the particular place (1) gives the word a new sharpness in the mind, (2) adds other words to the vocabulary, and so (3) broadens the whole idea.

Several such studies in synonyms should be assigned for exhibition and comparison on the blackboard according to the diagram above.

The magnitude of the vocabulary surrounding any common general idea can hardly be appreciated without a glance at such works as Roget's *Thesaurus of English Words and*

Phrases or March's *Thesaurus Dictionary of the English Language*. Their object is, instead of separating words according to their particular applications, to group them according to their general meanings. The following is adapted from a single entry in Roget's *Thesaurus*. Each column is a group of synonyms; and the two columns are contrasted by setting over against each other *antonyms*, or words generally opposite in meaning. Thus choice is helped by both comparison and contrast.

Several such studies should be assigned for exhibition and comparison on the blackboard according to the model below.

CONTENT

Nouns

Content, -ment, complacency, satisfaction, ease, heart's ease, peace of mind, serenity, cheerfulness, comfort, resignation, thankfulness.

Verbs

Be content, etc. (See *adjectives* and *nouns*), rest content, etc., let well alone, feel oneself at home, hug oneself, put a good face on, take in good part, put up with, make the best of, settle down, take comfort, — ease, — satisfaction, make contented, etc., put at ease, set one's mind at rest, satisfy, reconcile, soothe.

DISCONTENT

Nouns

Discontent, dissatisfaction, disappointment, mortification, regret, repining, vexation, soreness, heart-burning, querulousness, irritation, irritability, malcontent, grumbler, croaker.

Verbs

Be discontented, etc., protest, quarrel with one's bread and butter, repine, regret, fume, make a wry face, pull a long face, knit the brows, look black, fret, chafe, rebel, sulk, take ill or in bad part, grumble, croak, cry over spilt milk, cause discontent, etc., dissatisfy, disappoint, mortify, put out, cut up, vex.

Adjectives

Content, -ed, satisfied, complacent, at ease, serene, easy-going, cheerful, resigned, snug, comfortable, in one's element, afflicted, -vexed, etc., thankful.

Adjectives

Discontented, dis-, un-, satisfied, etc., exacting, irritable, repining, regretful, sulky, rebellious, vexed, sore, out of sorts, fretted, peevish.

Such a list, though at first sight discouraging, should rather be stimulating. It is gathered, not to be learned entire, but to be chosen from. No man's vocabulary ever included more than a small fraction of the dictionary; but every man's vocabulary is refined and enlarged by choosing among several words the best one for the place. If two simple antonyms are put on the blackboard, a class can pretty quickly furnish a column under each, after the pattern above, first nouns, then verbs, then adjectives, etc. No single pupil, perhaps, can furnish many; but many minds may have more words than any single one. And though no one should try to have the same vocabulary as his neighbor, nevertheless every one may enrich his own vocabulary as he listens and reads. If you are alert for new words that suit you, and form a habit of grouping them in your mind, your vocabulary will grow, because you will grow. For, after all, the way to widen your vocabulary is to widen your company, especially your company of good authors, to widen your experience by a habit of noticing and grouping, — in a word, to widen your life.

Prepare oral explanations of some of the following (the topics on page 75 are also available here). Sum up the most important point in the last sentence. Write the whole out afterwards with especial attention to precision of words.

How to Build a Temporary Shelter for Camping in the Woods.	The First Points of Sailing.
How to Resuscitate a Drowning Man.	Maple Sugar.
	How to Treat Sunstroke, and Why.

- The Care of a Wood Lot.
- A Department Store.
- How to Enjoy Summer in the City.
- Rural Free Delivery.
- How to Get on with One's Neighbors.
- How to Swim.
- How Our Milk Comes to Us.
- How to Keep Fowls for Profit.
- The Duties of a Policeman.
- Where I Live, and Why.
- The Daily Care of the Body.
- The School City.
- A Lumber Camp.

Exchange your theme, for criticism, with some one who has written on the same topic.

Give an oral account, precise and adapted to hold the interest of the class, of a significant newspaper or magazine article, either the following or another which has aroused your own interest. Instead of merely reducing the article to fewer words by a dry summary, present it entirely afresh, selecting what strikes you as most important and interesting to your audience, and putting it in such words as will make it significant to them.

✓ *Schoolboys on farms in vacation months — chances for girls in hotels.*

Bulletins from the State Department of Agriculture were distributed in the city high schools yesterday, calling for volunteers among both boys and girls to spend the summer in the country, the boys to pick up apples, dig potatoes, and do a lot of other things, and the girls to be clerks, stenographers, and furnish other light help about the summer resort hotels. Prof. E. W. Weaver of 25 Jefferson Avenue, Brooklyn, will arrange to find board, transportation, and pay for them.

This movement, though just begun in real earnest, has met with what its promoters regard as remarkable success. Two thousand five hundred high school boys of New York have already applied to Mr. Weaver for the coming vacation, and the places are not half filled.

Prof. Weaver of the Boys' High School, Brooklyn, is the originator of the plan, which means help for the boys who cannot get work in the city, and help for the farmers who cannot get labor in the country.

"A few summers ago," says Prof. Weaver, "while tramping through Dutchess County I saw hundreds of bushels of early apples of good quality going to waste, while at the same time fruit was sold from the retail stands in New York City, only sixty miles away, at almost prohibitive prices. The farmer in the busy season could not afford to use his regular hired help to prepare properly for the market these by-products of his farm, and occasional help was hard to obtain in country communities. At the same season I knew that there were thousands of able-bodied, intelligent young people out of school for the summer months seeking work of any kind in the cities to earn a little something toward their own support while being educated in the high schools and colleges of the state."

Here is what a boy did one day who went to the country last summer from the Boys' High School of Brooklyn, as related by himself:

"I got up at 5.15 o'clock. I watered the poultry, brought the kindling, and sprinkled the flowers before breakfast. In the forenoon I drove the horses attached to the horsefork, drew in a load of fodder, and unloaded two loads of hay. After dinner I picked raspberries and currants, pulled beans and worked in the vegetable garden. I usually finished up my work about 6 o'clock. My appetite was something enormous and our table was abundantly supplied with good food."

The farmers who got boys last year when the thing was tried as an experiment were as much pleased as the boys.

Of the thirty-two boys of the Boys' High School, Brooklyn, who went to the country last summer, Professor Weaver says all but one remained from the last week of June to the middle of September at the places to which they had been sent. One of the boys brought back \$70 in cash.

New York Times, May 13, 1908.

In addition, show how this article might be re-arranged to improve its coherence (page 86). How much of the repetition is emphatic iteration, and how much is merely superfluous? Revise the sentence beginning "Here is what a boy did" (see

page 6), and any other sentences that need revision. What is a *by-product*? Investigate as to their precision any words of which you are doubtful.

Precision in Idioms. — *The Distinction between Shall and Will.* — *Shall* in its original meaning expresses that which is to be, or is destined. Something of this root meaning is still felt in the preterit *should*, which often expresses what ought to be.

He should be here by six o'clock.

She should consult a doctor.

Some good should come of this.

Will, with its preterit *would*, keeps more commonly its original sense of purpose or willingness.

I will have it so.

She would wear a white dress.

We will await your pleasure.

But these two verbs have for centuries been used as auxiliaries to supply a future tense and certain subjunctive expressions. English never had an inflected future; and its subjunctive, never so well developed as the subjunctive of the Latin tongues, rapidly lost its distinguishing inflections after the Norman Conquest. Its forms being thus blurred, and confused with those of the indicative, the auxiliaries *shall* (*should*) and *will* (*would*), with *may* (*might*) and some others, came to be used increasingly in cases where other modern languages have kept the subjunctive.

To express simple futurity, usage is now as follows:

I (we) shall see.

You will see.

He (they) will see.

That is, *shall* is used with the first person, *will* with the second and third. Though this distinction is modern (it is not

found, for instance in Shakespeare), it is now kept by all careful writers and speakers. In indirect discourse the same distinction is made between *should* and *would* to express simple futurity.

I said we should come; and he said you would meet us.

But besides expressing futurity in this way, *shall* and *will* are also used in other ways derived from their original meanings. *I will come to-morrow, and you shall give me satisfaction* means *It is my purpose to come, and you must give*. Thus to express intention, whether purpose, willingness, promise, or command, usage is quite the opposite: *will* (*would*) with the first person, *shall* (*should*) with the second and third.

I will see (I am determined to see).	I will wait	(I promise).
You shall see (I promise you).	You shall wait	(I command).
He shall see (I promise him).	He shall wait	(I command).

We will let them examine our accounts (We are willing).

Thou shalt not kill is a direct command. Sometimes a command is softened by formal courtesy through the use of the third person with *will* instead of the second person with *shall* or the imperative.

Captain Hargrove will report to headquarters.

Shall may be used with the second person in questions expecting *shall* in the answer.

Shall you arrive in time to see her? (Answer, *We shall*.) But —
Will you write to me? (Answer, *I will*.) *i.e.*, Are you willing?
Do you promise?

To distinguish these uses so carefully as to express the desired shade of meaning is excellent training in precision.

Explain the shade of meaning intended in the following, and correct any errors:

Never mind; we will be out of reach before then.

We will send it without fail.

Will you join us?

I will drown; nobody shall help me.

Shall he violate the law because he is rich?

No one shall use the library after six o'clock.

I will see what this means.

I shall soon know.

The third division will hereafter hand in themes on Fridays before 9.30.

I will reach Pittsfield at one.

Certainly they will, if they see a chance; but we will not give them one.

You should see him jump.

It should seem that a full half of Johnson's life, during about sixteen years, was passed under the roof of the Thrales.

Precision in Idioms. — *The Subjunctive.* — The original English preterit subjunctive is recognized to-day mainly in a few idioms of the verbs *be* and *have*, less often in the third person singular of the present of other verbs.

If he were (or *were he*) expresses what the grammarians call a condition contrary to fact, or an unreal condition.

If he were sure of his ground, he would not talk so much.

This implies that he is not sure of his ground, and therefore is talking much.

If I were you (and of course I am not), I would do it.

If he was sure of his ground expresses something quite different, a doubt as to whether in the past he was sure or not. *If he were sure* means that, in the speaker's opinion, he is not sure now. *If I was you* would be nonsense. This distinction, though generally recognized now, was not so

generally recognized in the eighteenth century. It is sometimes, for instance, ignored in the *Spectator*. In other verbs it is less plain, because it is not marked by any difference of form.

If he really cared for exercise, he might play tennis.

This expresses, not any doubt as to whether he cared or not in the past, but a belief that he does not care at present; *i.e.*, it is an unreal condition in the preterit subjunctive; but it is no longer clearly distinguished in usage.

I had rather is another survival of the preterit subjunctive, and means *I should hold it preferable*, or *I would rather have*. Thus it is so nearly equivalent to *I would rather* (*i.e.*, *I should wish rather*, *I should prefer*) that the two have become practically interchangeable. Both *had* and *would* in these expressions are survivals of the preterit subjunctive; but *had rather* is more plainly subjunctive because it evidently refers, not to the past, but the future.

Had appears also as a preterit subjunctive sometimes in unreal conditions (see above).

If I had his chance (or, Had I his chance), I could succeed too.

The present subjunctive is even fainter. Only in the verb *be* and in the third singular of other verbs is it distinguished by difference of form; and even here it is no longer in general use. In careful writing, and sometimes in speech, conditional clauses looking to the future, and clauses following a wish expressed or implied, may still use the present subjunctive.

If they *be* cautious, they will wait for daylight.

If any one man *choose* to enslave another, no third man shall be allowed to object.

It is $\left\{ \begin{array}{l} \text{our wish} \\ \text{expedient} \\ \text{to your interest} \end{array} \right\}$ that he be treated with consideration.

Similarly the preterit subjunctive is heard in *I had rather you told me all than kept anything back, however painful.*

But the indicative (*If they are cautious*) is more common to-day in conditional clauses, whether the reference be to the present or to the future. And clauses after expressions of wish often use some verb-phrase with an auxiliary: *I hope he will (or may) be treated with consideration. It is to your interest that he should be treated, etc.*

The blessing *Peace be with you* is another survival of the present subjunctive. Like it are the more familiar *Good luck (be) to you!* etc.

Examine the following:

If Gates (*was? were?*) the better general, why was he so slow to attack?

If this (*be? is?*) treason, make the most of it.

Be he white or black or brown, the law will protect him.

Were we three times as much in his debt, he could not demand of us this service.

You will not get another bite, if you fish here all day.

(Sequence of tenses, distinctions among conjunctions (*for* and *because*, *on the other hand* and *on the contrary*, etc.), idioms in the use of certain prepositions with certain verbs (*sympathize with*, *differ from* and *differ with*, etc.) and other matters of grammar, may here be reviewed by oral reports for precision of statement, and by written exercises for precision of application.)

Definition. — Direct practice in precision may be had from the framing of definitions. Definition of one kind is implied in the previous section on synonyms. We may define by telling which of the group of synonyms surrounding a word are nearest to it in meaning, *e.g., prelude, intro-*

duction, preliminary. But every definition that aims to make precise distinctions must answer two questions: (1) To what class does it belong? (2) What distinguishes it from others of this class? Such a definition gives both the class and the distinguishing marks of the individual, both the general and the particular, both the points of resemblance and the points of difference. To give both in a single sentence is good practice in both precision and conciseness.

<i>word defined</i>	<i>class, general resemblances</i>	<i>individual, particular differences</i>
An automobile is a	vehicle	with locomotive power.
An isosceles is a	triangle	with equal sides.
The mayor is the	city official	in chief.
The cabinet is the body of federal officers	advisory to the President.	

The two parts need not be given in this order. *The mayor is the chief city official* is equally precise in the opposite order. The class should always be the smallest, the most limited, possible. *The mayor is a man who* — begins too far away. *Man* is too large a class-name for this definition. *The mayor is an official* — saves time by directing thought at once to a more limited class of mankind. Still better is *city official*. It is unnecessarily vague to say, *Forestry is the care of trees* or *the study of trees*, when in fact forestry is the *science* of trees. Always find the class nearest to the thing defined.

Which of the following definitions is satisfactory? Revise the others.

A policeman is one who preserves public order.

Elasticity is the power of bodies to recover their form after compression.

A cube is when the sides are all equal.

Lumber is cut wood.

A senator is one who represents a state in Congress.

A sentence is a complete statement.

Humor is wit and love.

A prelude is an introduction in music or poetry.

Define a single sentence each of the following:—*lady, superstition, insect, cloud, timber, kerosene, tide, marines, clause, exposition, wind, library, corporation, daisy, pulley, turbine, loyalty.*

Defining in a single sentence by the class and the earmarks of the individual, important as it often is for precision, is rarely sufficient. For instance, many people who know that an *alderman* is a *city official* have the vaguest notion of his duties. In this case the giving of the class is superfluous, and the giving of the distinguishing particulars in a single sentence very difficult, if not impossible. *Violin*, again,—almost any one knows it is a stringed instrument played with a bow. Really to define it, one must distinguish it from the *viola*, the *'cello*, etc. In other words, a definition is rarely sufficient to explain. Rather it formulates what has been explained, or is about to be explained, giving the whole in a nutshell. Thus the subject sentence (page 64) may be a definition. The development of this by instances (page 67) carries out the statement of the class; the development by contrast (page 68) carries out the distinctive marks of the individual. A definition, then, is really an exposition summed up in a sentence.

6. THE DISTINCTION BETWEEN EXPOSITION AND ARGUMENT

The main difference between exposition and argument is that argument goes further. It aims to make people understand, indeed, and therefore it gives instances and comparisons; but it aims further to make people assent and act, and therefore it uses instances and comparisons in such a way as to prove. For the subject of an argument is a

sentence requiring proof. *The United States was justified in going to war with Mexico*, — such a subject sentence needs for its development, not only statement of the facts, but also reasoning from the facts, not only exposition, but argument. It is usually called a *proposition*; i.e., a statement put forward as a challenge. *Congress should create a national bureau of health*, is a proposition. A proposition does not merely define or sum up; it implies some dispute or opposition, and challenges debate. Those who put it forward say in effect: This is what we believe, and shall try by reasoning to make you believe. Moreover, for argument, a subject sentence is not only desirable; it is necessary. A word or a phrase is not sufficient to guide argument to a definite conclusion. *The war with Mexico* may be explained, though a brief exposition would demand some further limitation; but it cannot be argued at all. For argument we must have a subject sentence, such as the one above. *Employers' liability* — what of it? *Employers should be liable for damages received by employees in the course of employment* — at once we know what is to be proved or disproved. *Boycott, prohibition, state railroads, tariff, large navy* — any of these topics may be argued all day without reaching any conclusion, unless the point at issue be first settled in a sentence.

Differing thus in particular, exposition and argument are alike in general; that is, in the fundamental methods of clearness. Both seek unity by limiting the subject, emphasis by announcing it and iterating, coherence by orderly plan. And the two are so commonly combined that it is often hard to decide by which name to call the whole composition. Every argument demands exposition; any exposition runs easily into argument as the writer becomes more interested. Some of the expositions written in connection with this chapter might as well, perhaps, be called

arguments. Nor need any one be anxious as to the name of the whole. But every one should be careful as to which he is doing in a given part, and able to explain without argument when he wishes to or needs to. Exposition shows what a thing is or was; argument shows what a thing ought to be or ought to have been. Every honest man must wish, and every educated man must know how, to avoid confusing the two or sacrificing the former to the latter. Provided the two are thus distinguished, exposition being put forward as exposition, argument as argument, they may be freely combined in the same speech or essay.

Argument is discussed fully in Part II., Chapter vii.

Which theme-subjects in the preceding pages suggest argument rather than exposition?

Frame three propositions for argument on matters of current interest, wording each precisely.

Frame propositions for debate on three of the following:

High-school Fraternities.

The Advisability of a School Track (or other) Team.

The Advantages of Manual Training.

City Life *vs.* Country Life.

College before Business.

(Informal class or society debates will be of profit here. A subject of interest may be agreed upon by vote, the proposition framed by common discussion, and the side (affirmative or negative) chosen, not assigned. Without attempt at formal organization into an affirmative and a negative team, the sides may be called up alternately. Speeches need not exceed three or four minutes, and should be limited to five. Each should be written out after the debate (not before) as a theme. Practice should be directed mainly (a) to developing a single main point fully up to an emphatic close, (b) to holding the attention of the audience.

Show which of the expositions quoted in this chapter are most argumentative and which are freest from argument.

Define argument in a single sentence.

SUMMARY OF THE CHAPTER

Introduction. Clearness is studied best in that kind of writing which aims to explain or prove.

1. Clear explanation (exposition) or proof (argument) develops fully from a single guiding sentence (*unity*).

2. Clear exposition or argument proportions the space and ends with the point (*emphasis*).

3. Clear exposition or argument catches the attention at the start and leads it along by a plan (*coherence*).

4. Clear exposition or argument depends so much on precise words that it demands a habit of choosing among synonyms, and tends to widen a writer's vocabulary.

5. In argument the guiding sentence is a challenge supported by reasons.

Show by a connected oral exposition of three or four minutes wherein this chapter is an expansion of the principles set forth in Chapter I.

CHAPTER III

THE PRINCIPLES OF INTEREST: DESCRIPTION

The themes in connection with this chapter should be written descriptions of about two hundred words. Describe usually in the form of a story. Try above all to be interesting by making a reader imagine himself in your scene.

1. INTEREST STUDIED BEST IN DESCRIPTION

THE principles of unity, emphasis, and coherence are so broad and constant that they will be found helpful in all kinds of writing. But since the rules derived from them in the previous chapter apply mainly to one kind of writing, it is better to seek other rules for the other kind. All writing may be divided into two classes (page 61): (1) exposition and argument, aiming to be clear; (2) description and narration, aiming to be interesting. Having learned some main points about the first, let us now examine the second. Then we can compare conclusions, to see how practice in either kind may help the other. We have already seen (pages 25, 47 and 87) that interest depends upon adaptation, upon choosing what will awaken sympathy between speaker and hearer, between writer and reader. In order to find more definitely how to arouse and keep this sympathetic interest, we need now to study separately that kind of writing which seeks it as a main object.

Now that kind of writing is the descriptive or narrative kind; for men and women through all time have always found it the more interesting.

Carving the Christmas Goose

Such a bustle ensued that you might have thought a goose the rarest of all birds, a feathered phenomenon, to which a black swan was a matter of course — and in truth it was something very like it in that house. Mrs. Cratchit made the gravy (ready beforehand in a little saucepan) hissing hot; Master Peter mashed the potatoes with incredible vigour; Miss Belinda sweetened up the apple-sauce; Martha dusted the hot plates; Bob took Tiny Tim beside him in a tiny corner at the table; the two young Cratchits set chairs for everybody, not forgetting themselves, and mounting guard upon their posts, crammed spoons into their mouths lest they should shriek for goose before their turn came to be helped. At last the dishes were set on and grace was said. It was succeeded by a breathless pause, as Mrs. Cratchit, looking slowly all along the carving-knife, prepared to plunge it in the breast; but when she did, and when the long-expected gush of stuffing issued forth, one murmur of delight arose all around the board; and even Tiny Tim, excited by the two young Cratchits, beat on the table with the handle of his knife, and feebly cried Hurrah!

— DICKENS, *A Christmas Carol*.

2. CLAIMING INTEREST (EMPHASIS)

What makes this description interesting? Not any novelty in the subject; for that is so familiar as to be commonplace. The same thing has happened over and over again to thousands. Dickens teaches us first of all, then, that in order to be interesting we need not write of anything extraordinary. Few of us have seen the glaciers of Alaska, or shot tigers in the jungle, or been wrecked at sea. If novelty of subject were necessary, most of us must give up trying. Now though novelty of subject may be interesting too, the passage shows us that we all keep an interest in ordinary, familiar things. Is not the description above interesting precisely because it is familiar? Does it not appeal to us because we have had like pleasures ourselves?

A subject may be interesting, then, by reminding us of common human experiences.

Abundance of Details. — But how does this description remind us of our own past feasts? Its method of appeal will become clearer by contrast.

Carving the Christmas Goose

Such a bustle ensued that you might have thought the viands very unusual, phenomena quite unparalleled; and in truth they were nearly so in that house. While several members of the family prepared the various dishes, the others took their places with great expectation. At last everything was ready, and the grace was said. As the carving began, every one gave vent to eager delight.

All the interest is gone. Yet all the facts are kept. The interest, then, cannot be merely in the facts themselves; it must be in the way of telling them. The rewriting leaves out all the specific details (page 32): the particular people and things, the particular motions and attitudes, the particular sounds and smells. And it is precisely the mention of such particular things, such definite sounds, sights, and smells, which puts us into sympathy with the writer, which awakens our interest by helping us to imagine ourselves on the spot, which, as we say, puts us there. The first lesson in interest is to stimulate imagination by an abundance of sensations, by realizing the situation definitely in its sounds, light, colors, smells, — in a word by specific mention of concrete details.

The way to be interesting, then, is not merely to state facts, but to suggest feelings. Clearness is sought by developing ideas for the understanding; but interest is sought rather by suggesting sensations to the imagination. Clearness is an affair of the head; interest is of the heart. "The others took their places with great expectation" —

that is clear enough; but it leaves us cold. "The two young Cratchits . . . crammed spoons into their mouths lest they should shriek for goose" — at once we have a picture in our minds. We sympathize, we share the writer's feeling, we are interested, because he gives us concrete images.

Selecting from the topics below the scene most familiar to you, make lists of the characteristic sounds, sights, smells, etc., that you associate with it, as follows: —

The End of the Wharf

Sound, lapping of water against the piles — creaking of pulleys — distant flutter of paddle-wheels — screaming of gulls, etc.

Smell, low tide — tar — fish drying, etc.

Motion and Attitude, heaving of a moored schooner — wheeling of gulls — man pulling up a sail — barefoot boy cleaning deck — old sailor sitting on a post, stoop-shouldered, smoking clay pipe, — water dancing, etc.

Color and Light, water blue in strong sunlight — white caps — cloud shadows — red flag on yacht club across the bay — green lawn with black cedars behind — aspens on point to right showing silver-white side of their leaves in the wind — new mast of sloop near by yellow in the sun, etc.

Form and Outline, looking through leaning masts across open water to yacht-house point and rounded hills behind; harbor a horseshoe made by a jutting point on each side, etc.

1. The Waiting-Room at the Railroad Station.
2. The Bridge over the Railroad Yards.
3. Feeding the Stock on a Winter Morning.
4. A Busy Office on the Tenth Story.
5. In a Sleeping-car.
6. Night in Camp.
7. The Stock Yards.
8. School Recess.
9. A Busy Street Corner.
10. Harvesting Wheat.
11. The Children's Ward in the Hospital.

12. The Last Dance.
13. Little Boys Playing Baseball.
14. Mail Time at the Post Office in a Country Store.

The object of this exercise is not to arrange these details. It would hardly be interesting to read them in groups, all the sounds together, then all the smells, etc. The object is simply to see how many concrete details the mention of a familiar scene recalls to you. Consider selection and order afterwards. First simply try to be as abundantly concrete as possible. If your list be compared on the blackboard with one of your classmates' for the same scene, each will probably be surprised to find on the other's list a striking detail not given on his own.

Study in the same way, *i.e.*, by making similar lists, the abundance of concrete detail in the following. They will also give you an idea in advance how to combine concrete details in a connected description.

Christmas Eve on the Street

For the people who were shovelling away on the housetops were jovial and full of glee, calling out to one another from the parapets, and now and then exchanging a facetious snow-ball — better-natured missile far than many a wordy jest — laughing heartily if it went right, and not less heartily if it went wrong. The poulterers' shops were still half open, and the fruiterers' were radiant in their glory. There were great, round, pot-bellied baskets of chestnuts, shaped like the waistcoats of jolly old gentlemen, lolling at the doors, and tumbling out into the street in their apoplectic opulence. There were ruddy, brown-faced, broad-girthed Spanish onions, shining in the fatness of their growth like Spanish Friars. . . . There were pears and apples, clustered high in blooming pyramids. There were bunches of grapes, made, in the shopkeepers' benevolence, to dangle from conspicuous hooks that people's mouths might water gratis as they passed. There were piles of filberts, mossy and brown, recalling, in their fragrance,

ancient walks among the woods, and pleasant shufflings ankle deep through withered leaves. There were Norfolk Biffins, squat and swarthy, setting off the yellow of the oranges and lemons, and, in the great compactness of their juicy persons, urgently entreating and beseeching to be carried home in paper bags and eaten after dinner. The very gold and silver fish, set forth among these choice fruits in a bowl, though members of a dull and stagnant-blooded race, appeared to know that there was something going on; and, to a fish, went gasping round and round their little world in slow and passionless excitement.

— DICKENS, *A Christmas Carol*.

Early Spring by the Mill Stream

The stream is brimful, now, and lies high in this little withy plantation, and half drowns the grassy fringe of the croft in front of the house. As I look at the full stream, the vivid grass, the delicate bright-green powder softening the outlines of the great trunks and branches that gleam from under the bare purple boughs, I am in love with moistness, and envy the white ducks that are dipping their heads far into the water, here among the withes unmindful of the awkward appearance they make in the drier world above.

The rush of the water and the booming of the mill bring a dreary deafness, which seems to heighten the peacefulness of the scene. They are like a great curtain of sound, shutting one out from the world beyond. Now there is the thunder of the huge covered wagon, coming home with sacks of grain. That honest wagoner is thinking of his dinner's getting sadly dry in the oven at this late hour; but he will not touch it till he has fed his horses, — the strong, submissive, meek-eyed horses.

See how they stretch their shoulders up the slope toward the bridge, with all the more energy because they are so near home. Look at their grand shaggy feet, that seem to grasp the firm earth, — at the patient strength of their necks, bowed under the heavy collar, at the mighty muscles of their struggling haunches! I should like well to hear them neigh over their hard-earned feed of corn, and see them with their moist necks, freed from the har-

ness, dipping their eager nostrils into the muddy pond. Now they are on the bridge, and down they go again at a swifter pace; and the arch of the covered wagon disappears at the turning behind the trees.

— GEORGE ELIOT, *The Mill on the Floss*.

Tramping with a Pack-donkey

The track that I had followed in the evening soon died out, and I continued to follow over a bald turf ascent a row of stone pillars, such as had conducted me across the *Goulet*. It was already warm. I tied my jacket on the pack, and walked in my knitted waistcoat. *Modestine* herself was in high spirits, and broke of her own accord, for the first time in my experience, into a jolting trot that sent the oats swashing in the pocket of my coat. The view, back upon the northern *Gévaudan*, extended with every step. Scarce a tree, scarce a house, appeared upon the fields of wild hills that ran north, east, and west, all blue and gold in the haze and sunlight of the morning. A multitude of little birds kept sweeping and twittering about my path. They perched on the stone pillars; they pecked and strutted on the turf; and I saw them circle in volleys in the blue air, and show, from time to time, translucent flickering wings between the sun and me.

Almost from the first moment of my march, a faint large noise, like a distant surf, had filled my ears. Sometimes I was tempted to think it the voice of a neighboring waterfall, and sometimes a subjective result of the utter stillness of the hill. But as I continued to advance, the noise increased and became like the hissing of an enormous tea-urn; and at the same time breaths of cool air began to reach me from the direction of the summit. At length I understood. It was blowing stiffly from the south upon the other slope of the *Lozère*, and every step that I took I was drawing nearer to the wind.

— STEVENSON, *Travels with a Donkey*.

Definiteness of Details. — The concrete detail in these is not only abundant; it is definite. To describe in an interesting way, we must stir the imagination; we must call up

in our readers' minds definite sights and sounds; for only thus can they imagine themselves in our scene. It is thus that we appeal in conversation. We say, not vaguely, "Do you remember what a good morning we had there?" but, "Do you remember how hard packed the hill was? And that bump at the bottom? And then that black ice!" Such specific, concrete details, as they help to recall a scene familiar to both speaker and hearer, also help a reader to imagine the scene in the mind of the writer. The more specific the details, the nearer the reader's imagination will come to the writer's. *The vessel was rapidly approaching the dangerous shore.* That statement is so indefinite that it might call up any one of fifty images, or no image at all. What was the *vessel*? sloop, schooner, battleship, steamboat? Was it drifting or forging head on? *Rapidly approaching* applies as well to a ferry-boat entering a slip as to a schooner in distress. *Dangerous shore* is more suggestive; but it might as well be *reef* or *cliffs*.

The dismantled schooner rolled helplessly toward the sand spit.

Through a rift in the fog the lookout on the steamboat suddenly descried the boiling reef dead ahead.

The old oil tank, her funnels crusted with salt, was lifted by every big wave nearer to the jagged black rocks.

It is only definite details that can call up definite images.

Realize in details of motion, attitude, sound, etc., the scenes implied by four of the following, so as to express them concretely and specifically. Add a few sentences if you wish. Try especially for specific verbs.

1. Sheridan was rapidly approaching Winchester. 2. He was plowing a stony field. 3. The pitcher delivered the ball. 4. He narrowly escaped the automobile. 5. The train came to a stop. 6. A squirrel ran up the tree. 7. Fifty girls were working in the room. 8. The crowd before the bulletin applauded. 9. She

seemed weary. 10. An old man sat in the sun. 11. Patrick Henry then continued his speech. 12. This last effort carried the ball over. 13. The ferry-boat entered the slip and was made fast. 14. At sunset the flag was taken down. 15. The ambulance surgeon examined the man on the sidewalk.

Observation. — So far, this study of description has shown the interest that lies in concrete details, in the abundance of sound, light, color, motion, attitude, smell. Has it not shown something else, — that you cannot always use as many of such details as you wish, because you have not noticed them?

Does a cow lie down in the same way as a horse? What is the attitude of a man holding a drill for his fellow-workman to strike with a sledge? What would be the right word to describe the gait of a duck so as to distinguish it from the gait of a hen? The gait of a sailor as distinguished from that of a soldier? What is the look and sound of stevedores unloading boxes from a steam boat? Barrels? How is a steel girder placed in the frame of a tall building? Distinguish as sharply as you can the impression of an express train approaching and passing on a level. (A group of such questions, adapted to the environment of the students should be assigned for oral and written reports, blackboard, and discussion by comparison. Direct attention, not to statistical accuracy, but to fulness and precision in reporting sensations to the sights, sounds, smells, etc., that make up familiar impressions.)

Evidently interest depends on observation. How, then shall observation be intensified? Some scenes, of course must be given up because they are quite outside of your experience. But it is already plain that within your experience many interesting details have been unnoticed. Cultivate the habit of realizing more in familiar things. Observation is a matter of habit; and the habit will be directly helped by practice in writing description. In fact

one of the best results of this practice is that it makes the writer more and more alive to the sensations of this good world. It increases sensitiveness.

Something of this, perhaps, you have gained from nature-study. You have learned to distinguish more accurately the colors and forms of flowers, the bark of trees, the notes of birds. Apply the lesson to observation of people; learn from observing nature how to observe human nature. What are the attitudes, gesture, sound of voice, of a stump-speaker before election? Notice the details of the crowd around him. What are the characteristic sounds and motions of a class let loose from school? Of a baby playing on the floor? Notice a crowd of newsboys snatching their bundles of papers from the tail of the distributing wagon. Try to seize the sound of their cries, the motion of their jostling and reaching and darting away, the dirty faces, the white flash of outstretched papers, the red of a colored supplement, etc. Workmen eating lunch at noon by an open trench — what are the characteristic details of such a scene? Notice how clerks in a bank despatch their business behind the glass screen. Open your senses by opening your sympathy with all kinds of people. People are of all subjects most interesting to other people. In order to increase the interest of our writing we must increase our own interest in our fellow men. For we observe best where we sympathize; and the great interest of writing, after all, is human interest.

Write a brief description (100–150 words) assigned from the following list as a common class exercise for comparison of choice of details, definiteness of words, and human interest. The remainder of the list will suggest topics for later themes.

At Work

The Wood-choppers.
 In the Foundry.
 Cotton-picking.
 The Motorman.
 In a Woolen Mill.
 Stoking.
 The Carpenter Shop.

At Play

The Snow Fight.
 Mud Pies.
 Recess.
 The Swimming Hole.
 Porpoises.
 In Camp.
 The Excursion Steamer.

3. FIXING INTEREST (UNITY)

But as a writer becomes more sensitive to sensations, as he becomes readier to use the interest of sound, motion, smell, color, and light, he becomes aware that he cannot record all these just as they come to him. They are too many and too confusing. As the writer of an explanation must compose his thoughts in order to convey them to a reader, so the writer of a description must compose his sensations. His object is to arouse sympathetic interest by making his reader imagine himself in the scene described. To do this he must suggest the concrete details that made the scene interesting to him. But he cannot suggest them all. Life is too full to be recorded completely. And even if he could set all down, all the sounds of a city street, all its lights, colors, motions, attitudes, odors, the record would hardly be interesting, and it would certainly be confusing. There is no use, then, in trying to make a complete record of all sensations. It could hardly be done in unlimited space; and the space of any description is limited. Description cannot hold interest very long at a time. The practical problem, then, is how to gain the interest of abundant concrete detail for a short description.

Characteristic Moment.—The main way is to limit the time. It is impossible to keep a reader's interest in a short description of a whole day. To put the whole day into a

short theme is to squeeze out the very details on which interest depends. It reduces the theme to a dry catalogue. Conversely, to put in abundant concrete detail for a whole day would so swell the theme as to make it tiresome by its very length. In this kind of writing, the only long compositions that hold interest are connected stories; and these have an art of their own which cannot be mastered until one first knows how to compose short descriptions. Look back over the descriptions quoted in this chapter. The first covers but a few minutes, the time between taking up the dinner and beginning to serve it. The second covers no longer time. Everything in it could have been seen and heard in a few minutes' steady observation. The third, after a brief glance at the stream and its banks, covers only the time taken for the wagon to approach the bridge, cross it, and disappear around the bend. The fourth, which covers the most time, is after all limited to the ascent of one long hill. First, then, do not try to cover much time.

The object of limiting the time covered by a description is similar to the object of limiting the scope covered by an explanation (page 64); it is to be abundant within the limits. In either case, that is the only way to be abundant. It is the only way to make an explanation full enough to be clear; it is the only way to make a description full enough to be interesting. But in description the best way to apply this principle of limitation is to select — not any brief time, but that particular brief time which is most characteristic. I wish to describe newsboys. Part of the day, perhaps, they spend at school. No particular interest in describing them when they are just like other boys. In what brief time of the day will they show most of those concrete details of motion, attitude, sound, etc., which I have observed as characteristic of newsboys? Just when they scramble for their papers and rush off crying them. There it is in two

minutes. Success in description consists largely in cultivating a habit of selecting the characteristic moment.

Select from each of the following general topics which fall within your observation a characteristic moment for description. Select more than one, if you can; but do not try to describe more than one in a single theme. Let each moment be a moment of action; for this opens a wider range of concrete details. In writing out the description, put it into the form of a brief story whenever that seems easier.

- | | |
|---------------------------|------------------------------|
| 1. Firemen. ~ | 8. Morning Chapel. |
| 2. A Locomotive Engineer. | 9. Haying. |
| 3. Factory Girls. ~ | 10. The Railroad Station. " |
| 4. In a Department Store. | 11. A Country Post Office. ° |
| 5. Fishing. ' | 12. A Clam-Bake. |
| 6. Laying Rails. | 13. The Baggage Room. |
| 7. The Drawbridge. | |

Characteristic Details. — One full moment, one short, unbroken space of time in which those concrete details which put the scene before a reader are naturally thickest, and especially a time of characteristic action, — for a brief description first of all select this. But even such a moment may yield more details than can be used; even in this there must still be selection. And already there is a guide to this further selection in that word *characteristic*. Select the details which are *characteristic*, which will make the scene seem like itself, the persons seem like themselves. Suppose a phonograph wound up in a children's playroom to record every word uttered there for fifteen minutes. The record would give no better description of the children than their mother's letter, of a quarter the length, which selected the expressions characteristic of those particular children at play. One significant word, look, gesture, color, or other characteristic detail is worth more for description than ten that are insignificant. In describing we do not stand before

our subject, like a photographer, to fix every detail. That is impossible. The situation that impresses us as worth description we may have experienced twenty times, or even a hundred. From all these experiences certain details stand out in memory as characteristic. From the throng of sights and sounds certain particular sights and sounds are vividly before us as giving that situation its peculiar character. These are the ones to select; for these will help to put a reader there in imagination. Selecting a brief, characteristic time, put into it those details which make it characteristic. Leave the rest out.

Look back at the description of the Christmas dinner on page 109. Abundant as it is in concrete detail, it makes no attempt to include everything. Perhaps the postman knocked. Perhaps Bob Cratchit sneezed. Perhaps there was a spot on the tablecloth. Were the walls white, or dirty? Dickens gives us what is characteristic of the scene. The rest he leaves out. He focuses our attention. He keeps us, not merely on one moment at a time, but in one mood. Each detail adds to the single feeling, the expectation of good cheer. A reader's imagination is most effectively stirred when every detail of a description adds to a single feeling.

Select, then, what is characteristic of your brief time, and especially what is characteristic of its feeling. Try to make your reader feel with you by giving him such details as must lead him to feel in one way. The best approach to this is first of all to select a subject which has made a clear impression upon your own feeling. In order to make others feel, you must feel yourself. No one is likely to care much about your description of something that you do not care about yourself. But having chosen something that makes a strong impression upon your own feeling, you stand a fair chance of making it rouse the same feeling in others. For the feeling that you wish to communicate will guide you in

choosing details, and the mention of those details that gave it to you will naturally give the same feeling to some one else.

You choose to describe the stokers in the engine-room of a steamer, because the sight of them made on you a strong impression of terribly hard work. You will naturally choose those details which will give a reader the same impression — the half-stripped bodies, the hot glare, the sweat, the grime, the heaving muscles. You will leave out the various nationalities of the stokers and the make of the engine, because these details have nothing to do with your impression. A subject is good for your description in proportion to the definiteness of the feeling it gives you. In a word, choose a subject which gives you a definite feeling. Choose that moment and those details which are likely to arouse that feeling most strongly.

SUGGESTIONS FOR ASSIGNMENTS TO BE COMPARED ON THE BLACKBOARD

SUBJECT	MOMENT	IMPRESSION	CONCRETE DETAILS
Bank Clerks at Work.	Just before closing.	Despatch.	Scan a check — flip it into a compartment — thumbing a pile of bills — clink of specie-stacker — click and clash of adding machine — slap of pass-book on glass counter — telephone bell — typewriter, etc.
Haying.	Before the shower.	Heat.	Sweat running into eyes — dog's tongue hanging out — air shimmers in distance — horses panting — no breeze — blue sky with thunder-heads — hay scratching blistered neck, etc.

SUGGESTIONS FOR ASSIGNMENTS TO BE COMPARED ON
THE BLACKBOARD — *Continued*

SUBJECT	MOMENT	IMPRESSION	CONCRETE DETAILS
Haying.	Unloading in the mow.	Hard work.	Strain of lifting and pushing — dust — eyes smart — back aches — swish — great billows of hay breaking over from below — smothered — no end — at last, sound of forks on wagon bottom, etc.
In a Department Store.	Christmas Eve, late.	Exhaustion.	Shop-girl — black rings under eyes — leans a moment against bales of linen — answers me- chanically — three customers at once — takes down box after box — sharp question of floor-walker — bad air — pallor — complaint of a cus- tomer — others push in, etc.

Use in this way the topics suggested in the preceding sections.

Difference between Exposition and Description in the Means to Unity and Emphasis. — One moment at a time, one impression at a time, — what is this but the principle of unity? We come back, then, to the first guide in explanation (page 62). But the application is different. A description, however well unified, cannot always be summed up in a sentence. A sentence expresses unity of thought; description is concerned rather with unity of feeling or impression; and this kind of unity is not tested by summary in a sentence. Sum up in a sentence each of the descriptions quoted in this chapter. It can be done; but it does not tell what really holds the description together; for in each case the singleness comes, not from a controlling

thought, but from a controlling emotion. The impression of the first might be put into some such phrase as *the good cheer of the poor*, or *hungry expectancy*. Its single feeling is plain enough; yet it cannot easily be summed up, even in a phrase. The second might be labeled *Christmas jollity in little things*, or *the Christmas feeling everywhere*. The feeling of the last two might be called equally *the joy of being out of doors*; yet they are quite different. Now all this teaches two things very important for description. First, the way to convey a feeling in words is not to sum it up or name it, but, keeping it in your own mind as you write, to suggest it by those concrete details which gave it to you. Secondly, though a short description should have unity as well as a short explanation or argument, it need not try to have unity by the same means. Explanation or argument, trying to make a reader think one way, keeps a core of thought, and a core of thought can always — should always, be summed up in a sentence; description or story, trying to make a reader feel one way, keeps a core of feeling, and a core of feeling cannot always, and need not ever, be summed up at all. Enough that it is there; for the details that it leads you to choose will pretty surely give your reader the same single feeling. In a word, do not try to unify these descriptions as you unified your previous themes. That might only make them formal or constrained. But simply by your choice of details try to make your reader feel in one way.

The principle of emphasis, too, should be applied to description less strictly. It lies behind that very concreteness which is the way of all effective description; for the way to make an impression strongly is, not to state facts generally, but to suggest images specifically by details of sensation. Concrete detail makes an impression stand out in the imagination; therefore concrete detail is emphatic. Something like the emphasis of iteration (page 69) in ex-

planatory writing is also used at times in description when a single detail which is most directly characteristic of the desired impression is repeated.

Joy

You never in all your life saw anything like Trotty after this. I don't care where you have lived or what you have seen; you never in your life saw anything at all approaching him! He sat down in his chair and beat his knees and cried. He sat down in his chair and beat his knees and laughed. He sat down in his chair and beat his knees and laughed and cried together. He got out of his chair and hugged Meg. He got out of his chair and hugged Richard. He got out of his chair and hugged them both at once. He kept running up to Meg, and squeezing her fresh face between his hands and kissing it, going from her backwards not to lose sight of it, and running up again like a figure in a magic lantern; and whatever he did, he was constantly sitting himself down in his chair, and never stopping in it for a single moment, being — that's the truth — beside himself with joy.

— DICKENS, *The Chimes*.

And finally a short description intended to be complete in itself, as your present themes are, may well gain emphasis by a strong ending (page 86). But usually a strong ending is gained for description, not by iteration of the whole point, as in explanation, but simply by putting last that concrete detail which is most characteristic or most striking. "Even Tiny Tim . . . beat on the table with the handle of his knife, and feebly cried Hurrah!" Notice the same method in the following:

The Christmas Dance

Then old Fezziwig stood out to dance with Mrs. Fezziwig. Top couple, too, with a good stiff piece of work cut out for them; three or four and twenty pair of partners; people who were not to be trifled with; people who *would* dance, and had no notion of walking.

But if they had been twice as many — ah! four times — old Fezziwig would have been a match for them, and so would Mrs. Fezziwig. As to *her*, she was worthy to be his partner in every sense of the term. If that's not high praise, tell me higher, and I'll use it. A positive light appeared to issue from Fezziwig's calves. They shone in every part of the dance like moons. You couldn't have predicted, at any given time, what would become of them next. And when old Fezziwig and Mrs. Fezziwig had gone all through the dance; advance and retire, both hands to your partner, bow and curtsy, corkscrew, thread-the-needle, and back again to your place; Fezziwig "cut" — cut so deftly, that he appeared to wink with his legs, and came upon his feet again without a stagger.

— DICKENS, *A Christmas Carol*.

In a word, the principle of emphasis, like the principle of unity, though it applies to description as well as to explanation, applies in a different way. It applies less strictly. It is followed best, not by remembering particular rules, but by being full of a particular feeling.

4. HOLDING INTEREST (COHERENCE)

What of the third principle, coherence? A description, no less than an explanation, should be easy to follow; but following from one image to another image is not much like following from one thought to another thought. The kind of plan that helps a reader to reason out a principle is hardly the sort to help him follow a scene in imagination. In writing an explanation we plan such an order as will make each thought prepare for the next and so lead on to the final full understanding of the single thought that underlies all. But in writing a description, as we aim at something different, at a final full feeling rather than a final full thought, so we plan differently.

A Shop of Petty Merchandise

A little shop, quite crammed and choked with the abundance of its stock; a perfectly voracious little shop, with a maw as accommodating and full as any shark's. Cheese, butter, firewood, soap, pickles, matches, bacon, table-beer, peg-tops, sweetmeats, toys kites, bird-seed, cold ham, birch brooms, hearth-stones, salt vinegar, blacking, red-herrings, stationery, lard, mushroom-ketchup, staylaces, loaves of bread, shuttlecocks, eggs, and slate-pencils: everything was fish that came to the net of this greedy little shop, and all these articles were in its net. How many other kinds of petty merchandise were there it would be difficult to say; but balls of packthread, ropes of onions, pounds of candles, cabbage nets, and brushes, hung in bunches from the ceiling, like extraordinary fruit; while various old canisters emitting aromatic smells established the veracity of the inscription over the outer door, which informed the public that the keeper of this little shop was a licensed dealer in tea, coffee, tobacco, pepper, and snuff.

— DICKENS, *The Chimes*.

Here Dickens, instead of describing coherently, humorously chose to write a jumbled catalogue. *Jumble*, in fact, would be a good title; for that was the impression he wished to convey. But suppose he had wished to be connected, to make his description move on easily. Would he have planned it by sorting these articles under heads, and then arranging them in some logical order of thought?

Prepared Foodstuffs: cheese, butter, pickles, cold ham, sweetmeats, red-herrings, bread, etc.

Raw Foodstuffs: bacon, eggs, onions, tea, coffee, etc.

Tobacco and Snuff.

Condiments: salt, vinegar, pepper, ketchup, etc.

Household Supplies (exclusive of food): firewood, soap, matches, birch brooms, hearth-stones, candles, etc.

Toys: peg-tops, kites, shuttlecocks, etc.

Order: (1) household supplies exclusive of food, (2) raw foodstuffs, (3) prepared food-stuffs, (4) condiments, etc.

Such an order would help us to understand that shop; but it would hardly help us to see it and feel it in imagination. It would greatly help an explanation; it would help a description very little. No, coherence in description must be sought by different means.

Choosing Subjects whose Characteristic Details are Motion and Sound. — Now in the first place, if you will look back over your own descriptions, you will find that those move along most easily which have most details of sound, motion, and action. The easiest way to connect the parts of a description, to give it coherence, is to have people, or animals, acting, — in a word, to throw it into the form of a story. Conversely, the hardest descriptions to arrange are those that deal with still life, with a sunset over still water, with a market before business has begun, with a person sitting or standing still, with a factory at noon when no one is working. In fact, concrete descriptive details might be roughly classified thus in the order of their difficulty for description:

- | | | |
|---|--------------------------|----------------------|
| } | 1. action | } with their sounds. |
| | 2. other motion | |
| | 3. sound without motion. | |
| | 4. attitude. | |
| | 5. smell. | |
| | 6. touch. | |
| | 7. form and outline. | |
| | 8. color. | |

What does this mean? It means in the first place that, since we are using words, and words are moving sounds, we can most easily make them describe things that characteristically move and sound. Painters, on the other hand, since they deal with line and color, can most easily paint things whose characteristics are line and color. Moving, sounding life is easier for description; still life is easier for

painting. A painting represents its details to us all together and all at once. It cannot represent motion; it can only suggest that to us by attitude. Sound it can hardly even suggest. But description has to suggest its details in succession. It cannot stand still. Words sound and go on. Therefore, since it is almost forced to bring in some sound and motion, description has greatest difficulty where the characteristic details do not sound or move, that is with still life. In the midst lie smell, which is rather easier for description, because it can only be suggested anyway; and touch, which is easier for painting, because painting can represent surfaces. Now all this does not mean that the details proper to painting should be omitted from description, but that they should not usually be elaborated or relied on mainly. Otherwise the description is likely to be lagging and confused, — in other words, incoherent. Description cannot compete with painting, any more than painting can compete with description, in its own field. The best scenes for description are those in which the characteristic details are motion and sound.

Practically this means that coherence in description is very much helped or hindered by the choice of subject. Since it is not well to try the hardest problems first, begin with subjects that have in real life a plenty of sound and motion, such subjects as a fire engine coming through a crowded street, the arrival of a train or steamboat, children at play. Such subjects have the further advantage of including people, of appealing directly to human interest. Of course they offer details of the other senses too, the flash of sun on the brass of the fire engine, the smell of soft-coal smoke from the locomotive, the red sweater of a boy playing prisoner's base, and these should by no means be omitted; but the natural succession of sounds and movements will almost of itself help the description to move along, and

coherence in description practically means moving along easily.

Choosing Moments of Action.—Then let the moments chosen (page 119) for your first descriptions be moments of action. For the subjects just mentioned this is a matter of course. It could hardly be avoided. For other subjects it requires a little management. Haying, for instance, is a subject that offers abundance of motion and sound, but more at some times than at others. Take the fullest moment. Begin, for instance, just as the horses are straining up the incline into the barn, and describe the unloading. Then the description can move along through rapid, continuous action, and end with the rattle of the forks on the bottom of the wagon. This suggests another help toward descriptive coherence. Try to begin with some action and without much explanation. If the moment is well chosen, the description will explain itself as it goes along. Instead of beginning outside the scene with an explanatory introduction, begin in the scene. You wish your reader to imagine himself in the scene; imagine yourself in the scene already. Don't stop to explain how you came to be there. Such preliminary explanation is usually both uninteresting and unnecessary.

As I was returning from the library the other evening, I had to force my way through the usual crowd at the corner of Washington Street and Union. Suddenly the fire-bell rang. The policeman held up his club and shouted. A pair of truck-horses on Washington Street reared back on their haunches. A trolley car on Union stopped with a jerk just short of the crossing. The crowd, as I looked up the street, seemed to be ploughed in two; and I was pushed back to the sidewalk. Clang! clang! Down the open lane thundered Number 3 . . . etc.

Beginning to Describe at Once.—See if anything would be lost in clearness by omitting the opening sentence printed in

italics. If the theme began "Suddenly the fire-bell rang," it would catch interest better. It would move better by moving from the start. Such a sudden beginning is appropriate to the desired impression of suddenness; and, though it is not always appropriate, nor always possible, the principle of beginning as quickly as possible is generally a help to easy movement.

One of the most characteristic sights of country life is the bringing in of the hay from the field to the barn. It was my good fortune to witness this last summer at a prosperous farm in Schoharie County. The great load, with the driver almost hidden in front and two other workmen lying on top, came into the barnyard scraping off wisps of hay against the tall lilacs at the gate. The men on top slid off and pulled out their forks. "Get up," yelled the driver; and the big bays dug their hoofs into the rough planks of the incline, strained the front wheels over the sill, and pounded into the barn, where the load filled the whole passage-way from mow to mow. "Lively, now!" said the driver, "or it'll rain before we get in that last load" . . . etc.

The object of this description being to make us imagine the arrival and unloading of the hay, there is no gain in introducing it by the sentences italicized. Indeed, there is a loss; for the interest does not begin till "The great load," that is, until there is something to see. Since the description itself must make the scene characteristic, there is no need of first telling the reader that it is characteristic. And how the writer came to see the subject is of no interest in itself and no help to the imagination. So far as possible, begin to describe at once; and especially arrange so as to omit explanatory introductions.

Connecting the Details by the Action of One upon Another.

—Choose first subjects full of motion and sound. Take them at those moments that are characteristically fullest of motion and sound, and begin to describe at once. Both

these counsels will help to make the description move along, will help, that is, its coherence. And the value of motion and sound may be realized further all through the description. Compare the two following. Both use the same details. They differ only in arrangement, or coherence.

Waiting for the Train (1)

The long, broad platform is full of people. On the steps three newsboys at once shout "Press," "Tribune," "Examiner." Here is a woman with a baby on one arm and a folding go-cart on the other. There is a group of chattering school-girls. To the right, at the end, a company of immigrants is waiting nervously. They wear red tags and have their clothing in bundles. They jabber together, and every few minutes one of them hurries forward, apparently to inquire if the train is not coming. In contrast is the portly banker who paces calmly up and down, reading his paper. He takes the train every morning. A baggage truck with a towering pile of trunks moves slowly through the crowd. "One side, please," the men keep calling, as they pull and push it into place. Down to the left the semaphore clacks over to show a clear track. Workmen, who have just driven the last spike of a new rail, move back to the platform. The station master with his megaphone bawls out, "Express for Chicago, making no stops." At once the immigrants move around with their bundles, and every one presses forward.

✓ *Waiting for the Train (2)*

I was pushed through the swinging doors into a woman with a baby on one arm and a folding go-cart on the other. As I helped her to keep her feet, three school-girls smiled, but calmly continued to block the steps. Once free of them, I set my heavy bag down on the edge of the platform. "One side, please." I picked it up out of the way of a towering truck-load of trunks. The crowd parted slowly before it. The man pushing behind struggled, stopped, and swore. The puller in front was blocked by a swarthy Italian immigrant wearing a red tag and brandishing a green ticket. "Chicago? Chicago?" he cried shrilly, looking at the

baggage-master's official cap. "Here, you," said the station agent, pulling him aside, "sit down till I tell you." The Italian faltered back to a crowd of his fellows, all wearing red tags and sitting on bundles. The portly, placid banker pacing by my side calmly chose a paper from the three that were thrust in his face. Instantly the two other newsboys dodged off, wriggling among the crowd and shouting "Press," "Tribune," "Examiner." The semaphore clacked down. After one last stroke on the spike, the workman in blue overalls swung his hammer over his shoulder and motioned his two comrades back. "Express for Chicago, making no stops," bawled the station master through his red megaphone. At once we began to trip over those Italian bundles.

The second description makes more of a story, but only for the purpose of connecting the details. The first description, putting the details down side by side in the present tense, makes a kind of catalogue. This is the simplest and easiest method for writing; but for reading, it is often dull and sometimes confusing. Such a list is harder to follow in the imagination. When the writer simply says, first, there are newsboys, then there is a woman with a baby, then there are schoolgirls, over there is a group of immigrants, here is a banker, then comes a baggage-truck, etc., it is hard to connect these details as we read. The description tends to fall apart in our minds, instead of hanging together. But if, using the same details, the writer connects them by some natural action of one upon another, they hang together so much better in a reader's mind that the whole is easier to follow. It makes little difference whether you run into the go-cart or into the newsboys, whether the immigrants rush up to the baggage-master or to the station-agent. Either is natural enough to such a scene. The point is to make the people of your descriptions act upon one another instead of simply standing one after another in a list. In a word, connect your description by some simple, natural story.

This story method of making description coherent is easiest and most natural for scenes of bustle, such as the foregoing; but it will also serve for many that are more quiet. If you avoid at first subjects which naturally have no motion or sound at all, you can soon learn so to arrange the action of your scenes, however slight it may be, as to connect your details.

The End of the Wharf

Little puffs of white cloud soared aloft in the blue from behind the far hills. The red flag on the point straight across the bay made its double in the calm water there. But a hundred yards nearer the water crinkled; nearer it ruffled, until the white caps in the middle distance broke and bounded toward me. They slapped against the piles underneath, and made the old scow moored at my feet heave and groan on her hawsers, etc.

Here, although there is no bustle, not even any action in the livelier sense of the word, the motion of the clouds and waves and scow is made to connect the details easily. Very different would have been the effect of simply putting down those details in a list:

The blue sky is dotted with little puffs of white cloud. Straight across the bay stands a red flag on the point. It is reflected on the calm surface; but the nearer water is covered with white caps. They slap against the piles of the wharf. An old scow moored at the end is heaving and groaning, etc.

The former is easier to follow because the action of the wind moves all through. The clouds *soared*; the water *crinkled*, *ruffled*, *broke*, *bounded*, *slapped*, *made* — *heave and groan*. In applying this method look to the verbs. Put them into the past tense, and see that they too, as well as the nouns and adjectives, describe specifically (page 115). The verbs of the latter form are more vague: *is dotted*, *stands*, *is reflected*, *is covered*. Avoid especially such flat and weak

predicates as *are seen, is heard, comes, goes, presents an appearance*. Wherever you can without straining, use a verb of action. If the predicates suggest motion, the whole description will move along more easily. In any case, see that the verbs are specific. But all this is only the carrying out of that useful method of coherence, the connection of the details by action of one upon another.

A Night in the High Sierras

I made my bed in a nook of the pine thicket, where the branches were pressed and crinkled overhead like a roof, and bent down around the sides. These are the best bedchambers the high mountains afford, snug as squirrel nests, well ventilated, full of spicy odors, and with plenty of wind-played needles to sing one asleep. I little expected company; but, creeping in through a low side-door, I found five or six birds nestling among the tassels. The night wind began to blow soon after dark, at first only a gentle breathing, but increasing toward midnight to a rough gale that fell upon my leafy roof in ragged surges like a cascade, bearing wild sounds from the crags overhead. The waterfall sang in chorus, filling the old ice-fountain with its solemn roar, and seeming to increase in power as the night advanced, fit voice for such a landscape. I had to creep out many times to the fire during the night; for it was biting cold, and I had no blankets. Gladly I welcomed the morning star.

— JOHN MUIR, *The Mountains of California*, Chapter iv.

Keeping One Point of View. — Finally, a description is easier to follow if it keeps one point of view; it may become confused if the point of view is changed without warning. To keep one point of view is naturally easy in a short description, especially a description full of action. Simply imagine yourself in the scene. Either you may say "I did" so-and-so, or you may use the third person, "The pop-corn vender twisted the corners of another little paper bag." In either case keep all through the description the

point of view of an actor or of a spectator. If, in describing a football scrimmage from the point of view of one of the players on the field, you suddenly give the way the scene looked from the stands, the description will be confused. But no one is likely to make this mistake so long as he keeps imagining himself, as he must do to describe well at all, on the spot. The point of view requires the more consideration the nearer the scene approaches to still life. In the former theme above, *The End of the Wharf*, notice that the point of view is of one sitting on the end of the wharf and looking out across the bay to the promontory and the hills beyond, and that the details begin farthest away and come straight towards the spectator. The latter, inferior form of the theme has no such clear line for the eye to follow. In proportion, then, as you use the more difficult details of form and color, arrange them so that the reader's eye in imagination can follow clearly from one point of view.

Coherence in short descriptions, then, may be summed up as follows: Choose first those subjects whose characteristic details are motion and sound. Take them at those moments which are characteristically fullest of motion and sound. Begin to describe with your first words. Connect the details by action of one upon another as in a story, and make the predicates strong. As you use more of the details of still life, be careful to make the eye follow from one point of view.

Describe one of the following, or another subject in this chapter.

The County Fair.

The Return of the Fishing Fleet.

The Inundation.

The Old Whaler.

The First Steamboat on the Hudson.

5. REACTION OF INTEREST ON CLEARNESS

Though interest is thus sought differently from clearness, nevertheless each helps the other. The means of each go

back to the same general principles of unity, emphasis, and coherence, because each is imperfect without the other. Nothing can hold interest long without clearness; and, though it is possible, it is not easy to be clear without being interesting. It is hard to understand thoroughly unless you are interested. Therefore the most successful explanations and arguments use not only instances and illustrations to stir our reasoning, but also other concrete details to stir our imagination. Thus they are the clearer by being the more interesting. For we understand a writer best when we sympathize. The following is the better explanation from being also a good description.

A Near View of the High Sierra Shows Nature in Continual Change.

Could we have been here to observe during the glacial period, we should have looked over a wrinkled ocean of ice as continuous as that now covering the landscapes of Greenland, filling every valley and cañon, with only the tops of the fountain peaks rising darkly above the rock-encumbered ice-waves like islets in a stormy sea — those islets the only hints of the glorious landscapes now smiling in the sun. As we stand here in the deep, brooding silence, all the wilderness seems motionless, as if the work of creation were done. But in the midst of this outer steadfastness we know there is incessant motion and change. Ever and anon, avalanches are falling from yonder peaks. These cliff-bound glaciers, seemingly wedged and immovable, are flowing like water and grinding the rocks beneath them. The lakes are lapping their granite shores and wearing them away; and every one of these rills and young rivers is fretting the air into music, and carrying the mountains to the plains. Here are the roots of all the life of the valleys; and here, more simply than elsewhere, is the eternal flux of nature manifested, ice changing to water, lakes to meadows, and mountains to plains. And while we thus contemplate nature's methods of landscape creation and, reading the records she has carved on the rocks, reconstruct, however imperfectly, the landscapes of the past, we also learn that as these we now behold have suc-

ceeded those of the pre-glacial age, so they in turn are withering and vanishing, to be succeeded by others yet unborn.

— JOHN MUIR, *The Mountains of California*, Chapter iv.

Compare the use of the concrete in the paragraph from Macaulay's history quoted at page 78, and also in the following:

Even an author whose reputation was established, and whose works were popular, such an author as Thomson, . . . such an author as Fielding, . . . was sometimes glad to obtain, by pawning his best coat, the means of dining on tripe at a cookshop underground, where he could wipe his hands, after his greasy meal, on the back of a Newfoundland dog.

—MACAULAY, *Samuel Johnson*.

6. INTEREST THROUGH WORDS OF FEELING

A composition is said to be interesting when it appeals not merely to the head, but also to the heart. The means to this appeal we have seen to be, in general, adaptation or aptness (page 28), and in particular the use of homely words (page 43) and of the specific and concrete (pages 110-116). Interest, then, must be largely an affair of the choice of words. True, we can hardly use concrete words unless we have felt the sensations of sound, sight, smell, color, for which they stand. Thus the first way to become interesting to others is to make our own senses quick and alert (page 116). Nevertheless, interest depends much more on the choice of words than clearness does. Clearness, being an affair of thought, depends rather on structure, on the arrangement of the whole composition and of its component parts. Interest, being an affair of feeling, depends rather on the choice of words that stir the imagination. It depends generally less on structure than on style. This means that certain words appeal to feeling far more than other words. The word *home* is more appealing than *dwelling*, *residence*, or *domicile*. It stirs us more.

It gives us more feeling. To say *I will back you* is warmer than to say *I will support you*. *Underling* arouses more feeling than *inferior*, *hobnob* than *associate familiarly*, *peevish* than *irritable*, *jeer* than *ridicule*. Some words, then, carry more feeling than their synonyms; and we give our writing interest largely by choosing these words of feeling. Precision, or clearness in words, comes from choosing among synonyms the word that conveys most exactly your thought; interest comes from choosing the word that suggests most quickly your feeling.

Interest through Homely Words. — Why should some words carry more feeling than others? Because they have, besides the dictionary meaning which they share with less interesting synonyms, certain associations. *Home*, for instance, besides its precise meaning in the dictionary, has clustered about it in our imagination some of the dearest things of life. Naturally, those words which have been longest in the language have gathered most of these associations. Therefore homely, familiar words commonly suggest more feeling than more elegant, less familiar words, because they have more associations. A less homely and a more homely word may convey the same thought; *paternal* has the same thought as *fatherly*; but the latter conveys more feeling, because it has more associations. *Father* has been in the language so long that it is full of associations. It more quickly calls up a picture in the imagination.

Native Words and Foreign Words. — The difference will be made clearer by a glance back at the *history of our language*.¹

Britain, in the first period of which we have certain knowledge, was inhabited by Celts (Kelts). These were conquered (55 B.C. — about 1 A.D.), by the Romans, who made Britain a province of the

¹The following sketch is too brief to be complete. It is intended merely as a summary for reference. For a full account consult a special treatise such as Lounsbury's *History of the English Language*.

Roman Empire, and spread their Latin language among the educated people of the towns. Traces of the Roman occupation survive in a few place-names such as *Lincoln*, (Lat. *colonia*, colony) *Lancaster*, *Winchester* (Lat. *castra*, camp); and in the word *street*, (Lat. *strata via*, paved road), which came into the island with the new thing for which it stood. English was brought in by another conquest. As the Roman rule of Britain weakened, the island was attacked by successive raids of German tribes from the mouth of the Rhine and neighboring countries, and was finally conquered (450-550 B.C.). Thus Britain was first Celtic, then Roman, then German. Of the conquering German tribes, Jutes, Saxons, Frisians, and Angles, the latter were so far the strongest as to give their name to the country and the language. The country became England (*Englaland*, land of the Angles); the language became, and has ever since remained, English (*Englisc*). The Celts were so pressed down and pressed back that their language had little influence on English. The Latin of the Roman soldiers lingered only in a few words like those quoted above. The new names England and English stood for a new nation and a new language. Germanic in being sprung from the same stock as the Saxon and Frankish of the continent, the language is even to-day nearer to German and Dutch than to any other modern tongues. But in its separation from the kindred tongues of kindred tribes it developed in England into a language practically distinct, which we know as Old English or Anglo-Saxon.

From this Old English we have kept most of our commonest and homeliest words, all our strong verbs, many common prefixes and suffixes (un-, be-, -er, -ing, -en, -th, -ful, -ship, -ness, -ly), and, what is more important, our whole syntax or sentence-habit. Christianity brought in Latin words (some of them originally Greek) relating to the services and government of the Church: *creed*, *Mass*, *rule*, *candle*, *bishops*, *alms*, etc. Later Germanic invasions of the Scandinavian Vikings brought in the Old Norse tongue. The influence of this was naturally greatest where their settlements were largest, in the north of England; but its extent can hardly be measured, because Old English and Old Norse were closely alike. From the seventh century to the eleventh, then,

England was a Germanic country with an almost purely Germanic language, called English, which we now call Old English.

In 1066 England was conquered by the French, and the English language by the French language. This French language was a derivative of Latin. The Celts of Gaul, like the Celts of Britain, were conquered by the Romans, but so much earlier and more thoroughly that the Latin civilization and the Latin language were widely and firmly established before the Roman Empire was broken by the Germanic invaders. Moreover the Germans that were most active in conquering Gaul, the Franks, adopted the language of the country. Instead of driving off the Romanized Celts and holding fast to their own Germanic speech, as the kindred Angles and Saxons did in Britain, they intermarried with the Celts and adopted Latin. Though it was not the Latin of Cicero, but the looser Latin of Roman soldiers, and largely mixed with Celtic, it was still Latin. The Franks did, indeed, give their name to the conquered country and to the language which they helped to change still more rapidly. The country came to be called France and the language French. But in fact the language had very little of the Frankish except the name. It was simply growing Latin. The same contrast between France and England appeared later during the invasions of the Vikings. Though these Vikings raided and settled northern France as well as northern England, the results in language were quite different. In England the Old Norse was merged with the kindred Old English; in France it was given up, just as the Frankish had been before. England, then, developed a Germanic language into English; France developed a Latin language into French.

What happened when the one was conquered by the other? At first French lorded it over English as the Frenchmen over the Englishmen. For though the Normans who conquered England were largely Norse in blood, they were French in language. Barring the Latin which in all countries at this time was used as an international language of learning and literature, French was used throughout England as the exclusive language of government, education, and polite society. England being brought under the same king as the larger and more important part of France,

the whole territory on both sides of the Channel was dominated by the French language. But English did not die. It had vitality enough to last. Not much written, but still tenaciously spoken, especially by common people, it lost many of its native distinctions; it was somewhat blurred; it changed more rapidly than if it had been undisturbed; but it endured and kept its Germanic character. When the territory on the other side of the Channel was lost, the interest of conquerors and conquered alike was fixed in England; a common patriotism drew both together and led to the revival of English. Those who were English by birth were prouder of their mother tongue; those who were French by birth were more eager to learn it; and meantime the two races had largely intermarried. Thus French gave way as English was revived.

The English that thus began a world-wide career was no longer quite the Old English, and it underwent still further change in being spoken by so many Frenchmen; but it kept its Germanic structure, its way of putting words together, its syntax or grammar. The change that came over it was not in syntax, but in an enormous addition of French words to the English vocabulary. The wholesale borrowing of those times became so strong a habit that for centuries English has taken in bodily more foreign words than any other language. In many cases the borrowed French words crowded out native words, led to their being forgotten and finally lost from common speech. Moreover the French share in the English vocabulary was increased by making derivatives in the French manner instead of the English. Most of the borrowed French words being originally Latin, there came into English a

familiarity with Latin prefixes and suffixes. Words like *deny* and *pursue*, like *language* and *mention*, opened the way to form others of the same pattern, and weakened the native power of the language to grow by the use of its own native prefixes and suffixes. Thus to-day, whereas modern German will make a new word from an old Germanic root by means of an old Germanic prefix or suffix, or by compounding in the old Germanic manner, modern English on the contrary has long tended either to borrow the foreign word with the new foreign thing or to make it by a Latin-prefix or suffix.

The ready adoption of foreign words and the large use of Latin prefixes and suffixes have worked together to send out of use many old native words and to weaken the native power of the language to grow by native means. This may be seen by comparing many native word-groups with the corresponding groups of French-Latin words. The Old English word *belief* appears also in *believe*, *unbelief*, *believer*, and *unbeliever*. All these words are formed by native English prefixes or suffixes; but *believable* is made by a Latin suffix. The Latin root of the same general meaning, *cred-*, appears in our *creed*, *credit*, *creditor*, *creditable*, *discreditable*, *credible*, *incredible*, *credibility*, *credulous*, *incredulous*, *credulity*, *incredulity*, *credence*, and *credential*. The native English *heart* appears in the native derivatives *hearten*, *heartly*, *heartily*, *heartiness*, *heartless*, *heartlessness*, but makes *dishearten* by a Latin prefix. The native *write* makes by native means only *writing*, *writer*, *unwritten*. How many words have we from the corresponding Latin root *scrib-scrip-*? This tendency has not worked always. *Right*, for instance, has more direct derivatives in modern English than the corresponding Latin *rect-*, and they are all made by English prefixes and suffixes; but the tendency is unmistakable.

The Latin tendency of our English vocabulary was confirmed and increased in the fifteenth and sixteenth centuries by that general return to classical literature which is called the Revival of Learning. It has been confirmed in more modern times by increasing intercourse with Latin countries, with Italy and Spain as well as France. But the important thing to remember is that all these changes are confined to the English vocabulary. They

have hardly affected English syntax. In vocabulary, English is more than three-fifths foreign, and largely French-Latin; in syntax, it remains home-bred.

Nor can we speak of the loss in the native power of the vocabulary without at once speaking of the great gain. For common ideas the presence side by side of native and foreign words (*motherly* and *maternal*, *heartly* and *cordial*, *like* and *similar*, *get* and *obtain*, *crowd* and *press*, etc.) gives us a wealth of synonyms, and accustoms us to precision of choice. The Latin element in the vocabulary has given our speech larger and sweeter harmonies. And the habit of borrowing has made it quickly adaptable to new conditions. Having kept our native syntax, we may congratulate ourselves on the Norman Conquest as a great boon to the English language.

In the abundance of synonyms thus offered by the readiness of our speech to borrow words, we have a wide field of choice. Though choice is sometimes made difficult by the very embarrassment of riches, nevertheless it gives great opportunity for precision. Each one of a group of synonyms has usually become attached to some particular shade of meaning; and care in determining this increases steadily one's command of language. So much for precision. For interest, generally that one of a group of synonyms will carry most feeling which is homeliest by having been longest in use. So in general those words have strongest associations of feeling which have come down to us from Old English. *Busy* is more forcible than *occupied* or *engaged*, *dear* than *costly* or *precious*, *drink* than *beverage*, *fight* than *conflict* or *contention*, *fret* than *irritate*, etc. But many French words passed so early into common use that they are quite as familiar as any Old English ones, and in some cases more familiar than their Old English synonyms. *Rage*, for instance, is as familiar to-day as the Old English *anger*, and more familiar than the Old English *wrath*. French words like *corpse*, *sturdy*, *prey*, *joy*, *jolly*, *stupid*, *ruin*, *chafe*,

curb, *base*, *falter*, carry as many associations of feeling as any native words. The point is not so much that the word should be native or borrowed as that it should be familiar.

This is clear in the opening of Gray's *Elegy*:

The curfew tolls the knell of parting day,
 The lowing herd winds slowly o'er the lea,
 The ploughman homeward plods his weary way,
 And leaves the world to darkness and to me.

Barring the French word *curfew*, which was introduced in the eleventh century with the custom that it names, every word in this touching stanza is native, except *parting* and *plods*. And these borrowed words carry the same simple feeling as the native ones, because they are equally familiar. In fact, *plods* is more familiar than the native *lea*, which is no longer used except in poetry. In the following stanza the French-Latin words *fades*, *air*, *solemn*, *distant*, have the same effect as the native words and as the two Scandinavian words *glimmering* and *lull*. All are equally familiar; all harmonize with the same feeling.

Now fades the glimmering landscape on the sight,
 And all the air a solemn stillness holds,
 Save where the beetle wheels his droning flight,
 And drowsy tinklings lull the distant folds.

In the fourth stanza every word has an old homeliness. *Cell*, though Latin, comes down from the time of the monks who Christianized England. *Rude* and *hamlet*, though French, are as homely as any native words. Perhaps the most modern word in the whole stanza is *rugged*; and that may be a survival from the raids of the Norsemen.

Beneath those rugged elms, that yew-tree's shade,
 Where heaves the turf in many a mould'ring heap,
 Each in his narrow cell forever laid,
 The rude forefathers of the hamlet sleep.

Less homely words from the Latin part of our English vocabulary — and these are an overwhelming majority — make less appeal to feeling.

Let not Ambition mock their useful toil,
 Their homely joys and destiny obscure;
 Nor Grandeur hear, with a disdainful smile,
 The short and simple annals of the poor.

The French-Latin *joys, simple, poor*, are as familiar as any native words; but *ambition, destiny, grandeur, disdainful, annals*, are not. These make less appeal; they stir less feeling; and in this they are like most of the Latin words in English.

Interest through Specific, Concrete Words. — Further, it is plain that a word stirs feeling, not merely by being homely, but by being specific and concrete. General words stand for whole groups, classes, or species; specific words stand for individual things or particular actions. Abstract words stand for ideas; concrete words stand for sensations. General and abstract words sum up thinking; specific and concrete words suggest feeling.

<i>General</i>	<i>Specific</i>
light (<i>n.</i> and <i>v.</i>)	{ flare, flash, flicker, glare, gleam, glimmer, glitter, glow, sheen, shimmer, sparkle, etc.
look (<i>n.</i> and <i>v.</i>)	{ gaze, glance, peep, peer, scan, stare, etc.
mourn	{ sob, whimper, snivel, whine, weep, cry, moan, etc.
walk	{ march, pace, plod, saunter, shuffle, shamble, slink, sneak, stagger, stalk, stride, stroll strut, swagger, tramp, etc.

Abstract

pleasure in sailing

tedium

Concrete

bounding under foot, smell of salt breeze, white caps tumbling in the blue, distant red sail, song — "'Twas Friday night," etc.

yawn, look at the clock, drum with fingers, pace the floor, stare out of window, etc.

These few instances are enough to show that an abstract word is also general; a concrete word, specific. So we have really but two classes of words to contrast: on the one hand, general and abstract words conveying thoughts or ideas; on the other hand, specific and concrete words suggesting sensations and emotions. The contrast is shown on page 110. It appears in the weaker appeal of the stanza last quoted from Gray's *Elegy*, as compared with the opening stanzas. The power of specific, concrete words to stir sympathetic feeling, exhibited in all the quotations throughout this chapter, is seen once more in these earlier stanzas. The plowman does not go or walk; he *plods*. At once we sympathize with his weariness by seeing his action before the mind's eye. So a picture of twilight over the meadow is called up by that concrete word *glimmering*. So *wheels* and *droning* stir in memory an image and an echo of a beetle's flight. If you try to substitute other words for *toll*, *knell*, *tinklings*, *lull*, *heaves*, *turf*, *cell*, you will better understand the power of specific, concrete words to awaken sympathy by calling up distinct memories of sounds and sights. To be interesting, then, speak in specific, concrete terms.

For words are interesting largely in proportion as they rouse old associations, as they appeal to feeling through the

imagination. Interesting words are lively words, words full of suggestion. Uninteresting words are words which, however precise, suggest little or nothing to the imagination. Such are abstract, general terms like *argument*, *legislation*, *exigency*, *circulate*, *extensive*. Most of these come from the Latin. They are dull, not because they are Latin, but because they are general and abstract. Such words have few associations. They call up no images. They are limited to a few precise applications. They are words of thought, not of feeling. Just for this reason they are very valuable. We cannot do without them, especially in explanation and argument. But in description or story, and whenever else we wish to arouse interest, we must turn to the specific and concrete.

In a descriptive passage chosen from Irving's *Sketch Book* point out which words are of native origin or of familiar homeliness, which are French-Latin derivatives or less familiar; which are concrete, which abstract. Report in the same way on a descriptive passage from Hawthorne's *House of the Seven Gables*.

Compare as to the proportion of French-Latin words to native words, and of abstract words to concrete, the first six verses of Psalm xix. (King James Version) with Addison's hymn beginning "The spacious firmament on high," and both with the stanzas quoted above from Gray's *Elegy*.

Prepare an oral report, with quotations, on the choice of words in one of the following: the first chapter of the *Book of Ruth* (King James Version), Browning's *How They Brought the Good News from Ghent to Aix*, or *The Pied Piper of Hamelin*, Goldsmith's *Deserted Village* or *Traveler*, or some other descriptive passage studied in the course of literature.

(Such exercises may be extended and adapted freely to the literature currently studied. They will be enhanced by offering some freedom of choice among favorite books, irrespective of the curriculum; but a certain number of assignments should be made on a few typical passages for comparison on the blackboard and in general discussion.)

Figures of Speech. — In trying to be specific and concrete we often use what are called figures of speech. Any use of words that is not literal is called figurative. Some people are naturally more figurative in their habit of speech than others; but we all use figures every day. *He knows which side his bread is buttered on*, refers, of course, not literally to bread and butter, but figuratively to a habit of circumspection. A hostess is said to *break the ice* when she dispels the first embarrassment of her guests. A bicyclist is literally *wheeling* on the road; and a gull is figuratively *wheeling* in the air above him. Indeed, it is largely by such figurative applications that language grows. *Wheeling*, as applied to the flight of certain birds, is so common that we hardly think of it as any more figurative than *circling*. So *grit* is as common in its figurative as in its literal sense. So in the past history of the language thousands of words have been extended in meaning by being applied figuratively.

Fume literally means smoke. In Latin (*fumus*) it was applied figuratively to silly talk. Coming into English through the French, it was applied figuratively to the headache and distaste that follow intemperance, and later to the expression of fret and impatience. Meantime the original literal meaning has been kept too, as in the word *chafe*; but in many words the original literal meaning has been dropped for the figurative, and this figurative meaning, thus becoming literal, has in turn given rise to new figures. In *vixen* and *whedde*, what was originally a figurative application has long been the only meaning, *i.e.*, has become literal. Find in a large dictionary what these words meant originally. Investigate also the successive meanings of *clog*, *coward*, *fret*, *style*. Point out the figurative expressions in the lists at pages 44–47; in the passages quoted throughout the present chapter.

Thousands of such instances show that figurative application of words is a natural tendency of speech, especially in description.

For figures of speech arise from the desire to be interesting by stirring the imagination to make pictures. And since this is done by specific and concrete words, figures are of two general kinds: (1) *figures of association*, arising from the desire to be specific; (2) *figures of likeness*, arising from the desire to be concrete.

Figures of Association. — Instead of saying *thirty new workmen*, we often say *thirty new hands*, specifying the significant part that does the work. So the officer on deck, or the boss of a gang, cries "*All hands!*" and the men talk of a *green hand*. *A man in his cups* is a picturesque description of a tippler, because it calls attention to the significant object. *Thirty sail* stands for *thirty ships* by the use of the most visible part for the whole. More poetically we say, *The pen is mightier than the sword*. Such use of the important part for the whole, or of the sign itself for the thing signified, is technically called *metonymy*.

Figures of Likeness. — Much more commonly we describe by figures springing from likeness. In order to be concrete, we stir the imagination to picture something by comparison. Thus the abstract, general idea of the awful shortness of human life is brought home to us concretely in the familiar ninetieth psalm used at funerals:

Thou carriest them away as with a flood. They are as a sleep. In the morning they are like grass which groweth up. In the morning it flourisheth and groweth up; in the evening it is cut down and withereth. *Psalm xc. 5-6.*

A more homely use of the same figure is the phrase *to look as black as a thunder-cloud*.

Such comparisons are called *similes*. Comparisons which, instead of being thus fully stated by *like* or *as*, are merely implied, are called *metaphors*. "The cock's shrill clarion," in the fifth stanza of Gray's *Elegy*, compares the cock-crow

to the sound of a horn without saying fully "The cock's shrill crow was like a clarion." And such implied comparisons are far more common. Metaphors are more common than similes because they are swifter. Indeed, nothing is more common in description than metaphors. They are so natural a means of concreteness that not only our descriptive writing, but even our daily speech, is full of them. Detectives are said to be *hounding* a suspect. An attorney *boils* with indignation. A woman *flits* along a corridor. The baby *crows*. A lively child is called a *cricket* or a *grasshopper*; a monotonously persistent boy, a *katy-did*. A runner *steals* a base. The locomotive *snorts* at the station. We are *left in the dark* as to the intentions of our mayor. And nothing could better show the activity of this habit than the fact that slang is very largely metaphorical.

A habit of metaphors is worth cultivating in so far as it helps toward concreteness. As part of the training in observation, it is worth while to notice in common things such picturesque likenesses. But neither metaphors nor any other figurative expressions are to be sought for themselves. A writer not naturally figurative who tries to add figures merely for ornament runs the risk of becoming artificial. It is far better to use a figure only when it comes to mind readily, only when in imagination one sees or hears the thing in that way. There is no need to beat one's brains for figures. Some of the best description is largely — some of it entirely — literal. The first two stanzas of Gray's *Elegy* and the fourth, which have hardly any figures, are quite as appealing as any of the others. No, try simply to be specific and concrete. Whether in so trying you become figurative or not is of comparatively little moment.

Prepare a brief list of metonymies, similes, and metaphors selected from the passages quoted in this chapter; another from books recently studied in the course of literature.

7. THE DISTINCTION BETWEEN DESCRIPTION AND NARRATION

Just as exposition is closely related to argument, so description to narration. Indeed, it is even less easy to keep the latter pair apart. Pure exposition, unmixed with argument, is quite possible and very often profitable; but pure description, unmixed with narration, is neither very common nor very easy. For description is usually subsidiary. Exposition may be an end in itself; but description is commonly used to help something else. Sometimes it is brought in to enliven an essay or speech, oftener to enliven a story. Thus, instead of standing by itself as a whole, it is usually a part; instead of being carried out at length, it is usually brief and fragmentary; instead of making the whole fabric of a composition, it is woven into the fabric of essay or speech or, most commonly, of story. Some of the best descriptions in English contain only a few sentences, and are parts of verse or prose narratives. Now this is the only important distinction between description and narration. Narration has a distinct plan of its own; description either is adapted to the plan of some exposition, argument, or narrative, or else borrows the plan of narrative and is written like a story. If it is brief and incidental, it is simply fitted into the plan of the whole; if it is long enough and distinct enough to demand a plan, it follows the plan of narration. Instances of the former are the description of the New England whalers in Burke's argument for conciliation, and the description of the desolate shore to which Sir Bedivere went with the sword of Arthur. Instances of the latter may be found in almost any book of travel or any newspaper. The very fact that these are often called stories shows that description and narration can hardly be separated. When we tell a story, we naturally bring in descrip-

tion; and when we describe at any length, even though we have no series of events to lead to a climax, we still naturally use the narrative order. Narrative is description — and more. What more it is will be discussed at length in Part II, Chapter viii. Meantime, in themes of the length presupposed by the present chapter, no further distinction need be made between the two.

Show that argument is exposition — and more.

How many of the descriptions quoted in this chapter are parts of stories? Which have most clearly a narrative order of events, as in a story? Select an instance also from your own themes. In this way prepare a topical recitation on the relation of description to narration.

Find two instances of description forming part of exposition or argument. Do these descriptions differ in form from those which are parts of narration? Prepare in this way a topical recitation on the relation of description to exposition and argument.

Select for reading aloud a striking brief description in one of the following: *The Lady of the Lake*, *Silas Marner*, *The Vicar of Wakefield*, *Ivanhoe*, *The Idylls of the King*, *The Sketch Book*, *The House of the Seven Gables*, *A Tale of Two Cities*. In which of these is the description most closely woven into the narrative, so that it must be quoted piecemeal, and in which is it more readily separable in longer passages for quotation?

Why is there more description in Shakespeare's plays than in more modern plays?

SUMMARY OF THE CHAPTER

1. The principles of unity, emphasis, and coherence in their application to interest are best studied through description or story.

2. Interesting description or story appeals to the imagination by abundance of concrete detail (*emphasis*).

3. Interesting description or story chooses the characteristic details of one characteristic moment at a time (*unity*).

4. Interesting description or story leads the imagination on (*coherence*):

(a) by choosing first such subjects as have for their most characteristic details motion and sound,

(b) by choosing first moments of action,

(c) by beginning to describe at once, without introduction,

(d) by connecting the details through the action of one upon another,

(e) by keeping one point of view.

5. Interest reacts on clearness.

6. Interest in words is the appeal to feeling through homeliness and concreteness.

7. The interest of narration is the interest of description *plus* the interest of a significant series of events.

CHAPTER IV

PLANNING FOR CLEARNESS: PARAGRAPHS

The themes in connection with this chapter and the following should be longer expositions (500–600 words), admitting argument freely, but distinguishing it. (See page 104.) They should be written so much less frequently as to insure (1) care in the preliminary outline, which should usually be submitted in advance for criticism and revision and sometimes for class discussion, (2) fulness and emphasis for each paragraph, (3) in connection with Chapter v., revision of sentences. In general, they should be first spoken from an outline of paragraphs, then written. Where it is impossible in the recitation periods to call up any large proportion of the class regularly for oral development of a whole theme, single paragraphs may be called for, especially when a common outline has been assigned. But students should practice in private the oral development of the whole from beginning to end within a specified time before writing it; and at least one whole theme should be called for at each recitation period. Profitable topics are (1) matters of current interest to the class, (2) topics of current study in science (including “nature study” and geography) and history, (3) topics of current study in literature (definite assignments, not general fields of study). Avoid topics for which the division is likely to be mechanical. A chronological summary of a man’s life, for instance, proceeds merely from year to year, or period to period. So an account of a process of manufacture proceeds merely from room to room. Neither gives any scope for learning how to develop a thought from stage to stage (see Part II. Chapter vi.). In order to acquire this progressiveness, use freely the outlines at pages 168–172 and others that may be conveniently provided. This practice may be kept up, as in the French schools, for a long period. While it does no harm to originality, it directly

helps coherence in extended composition. To the same end, the practice should include, besides themes, frequent paragraph summaries of noteworthy addresses, magazine articles, and chapters of books. The models chosen should be expository. They may have incidental argument or incidental description; but they should never, except in occasional illustration, be narrative. All the training at this period should center upon the paragraph as a stage of thought.

The class should discuss amply the paragraph plans proposed for themes, the oral development of these, the use of paragraph emphasis to make transition easier, — in short, the actual composition of the actual themes. Orally and in written revision of parts, this may well occupy much of the recitation time. The rest, once the few simple principles are understood, may be given to such analysis of essays and speeches as is indicated above and exhibited in the text. For analysis of current exposition in periodicals the teacher should make assignments after careful selection of such articles as have progressive development by clear paragraphs.

1. PARAGRAPHS THE PRINCIPAL MEANS OF COHERENCE IN LONGER EXPOSITIONS AND ARGUMENTS

THE two constant aims, clearness and interest, and the three constant principles, unity, emphasis, and coherence, once grasped in short compositions, there remains no new doctrine to be learned, nothing that does not follow from these. They contain all rhetoric in a nutshell. But there remain many problems to be solved practically, problems that arise so soon as one attempts to speak or write at greater length.

The practice of limiting the theme in advance (page 62), to secure unity, is equally valuable for longer compositions. To be clear, a longer composition, as well as a short one, needs to be unified. The main difference between the two is in the extent to which the root idea is carried

out. A theme becomes longer by having more amplification — more instances, more iteration and illustration; *i.e.*, by being fuller. It never leaves its point. If it becomes longer by losing its single purpose, by deviating into side-paths, or bringing in foreign matter, it becomes merely confused; it might much better be short. But the principle of unity may be applied to a longer theme somewhat less strictly. The very object of making the theme longer may be to bring together several aspects. If these aspects are so closely related that they can easily be held together in mind, the theme has sufficient unity. Suppose a theme on the city Board of Health to consider (1) the prevention of contagious diseases (vaccination, etc.), (2) their isolation when they break out (removal to isolation hospital, or placarding of dwellings, etc.), (3) the inspection of milk and water, (4) the inspection of sanitary conditions (plumbing, disposal of refuse, etc.). Though any one of these four would be enough for a short theme, they are so closely related to one another that a longer theme, if well arranged, could include them all as different aspects of one idea.

So a longer exposition, even though unified, cannot always be summed up in a single sentence. That test applies rather to each of its paragraphs (page 164) than to the whole. Many themes of considerable length do, indeed, hold throughout to a single sentence. The more a theme aims at persuasion, the more valuable is a single controlling idea so limited that a single sentence will hold it; for the prime requisite of persuasion is to be possessed by a single, very definite idea. But when the object is mainly explanation, the root sentence, though often an advantage, is not always a necessity. A sufficient safeguard of unity is simply to limit the topic beforehand to such aspects as can be fully discussed in the time and easily remembered together at the end (compare pages 104–106).

The principle of emphasis applies to longer compositions exactly as to short ones. Dwelling most on what brings out the main point most directly, ending with an iteration of the main point (pages 85-86),—both these means of clearness apply without change. The new problems of composing at greater length come mainly under the head of coherence. They are problems of plan. The greater the length, the more important the order. When you wish to say more than can be put clearly into brief space, at once you face the problem how to keep the whole together while you present it part by part. The solution is the paragraph. The most important mastery in extended writing of this kind is the mastery of composing by paragraphs.

2. THE PARAGRAPH AS A PART

What is a paragraph? Every one knows what a paragraph looks like. It is a block of print or writing set off by a space at its beginning. Whenever an essay extends to any considerable length, we expect to see it divided in this way by certain indentations. Similarly a speech of any considerable length is divided by pauses. These pauses do for the ear what the indented spaces do for the eye; they relax the strain of continuous attention by dividing the whole into parts.

But how? Evidently no one can mark off his paragraphs until he has them. No one can make paragraphs by merely dividing a whole already written into a certain number of pieces. Paragraphs made in that way would be merely accidental and mechanical. Instead of being a help to clearness, they might be a hindrance; for the divisions might be too many, or too few, or in the wrong places. No, paragraphs are not made by spacing or pausing. The spacing or pausing merely indicates where they are after they are made. They must be made first. They must be

planned before the essay or speech is written or spoken. To say that a paragraph is a group of sentences set off by indentation or pause from another group of sentences is to give a merely outside definition of the way in which a paragraph looks or sounds after it is made. What we need is an inside definition, a definition that will tell us how to make it. Before you write a longer essay or speech, divide your subject into such parts as you can most clearly build up one by one into a connected whole. The subject being too extended to be discussed all at once, divide it into convenient parts. Each of these parts will be a paragraph. A paragraph is planned, therefore, before it is written. It is not yet a group of sentences; it is a group of ideas or facts in the writer's mind. It is going to be one of the little compositions which he will build up into his single whole composition. He does not yet know in what words he will express it; but he knows exactly what ground it will cover. *A paragraph is a certain part of a subject, set off in the plan to be discussed by itself.*

Division, Grouping under Paragraph Headings. — A paragraph is first of all, then, one part of the whole plan. After jotting down any ideas and facts that seem useful to bring out your subject, and striking out any that seem on second thought superfluous, group the remainder, as they seem to belong most nearly together, under a few general headings. These headings will indicate your paragraphs. Each indicates that part or tract of the subject which can most clearly be discussed by itself.

What the Norman Conquest Meant to England

FIRST NOTES

1. Normans — adventurous, ambitious, leaders in France, explorers. English — had just repelled attack of Danes in the north.

1. English more stay-at-home (put this last), sober, steady.
4. Norman Conquest meant closer touch of England with the Continent in literature.
3. French then chief literary language next to Latin.
(French derived from Latin.)
2. Norman victory meant Normans in all important offices of England, French language in courts and schools, subordination of everything English.
3. English language degraded for lack of literature; all writing in French or Latin — result, English kept its native structure, but borrowed hundreds of French words.

Thinking over such notes as those above, the writer groups them under headings: (1) contrast of the two peoples, (2) political effects of the Conquest, (3) effects on English language, (4) effects on English literature. Then, by numbering each note accordingly, as above, he sorts out his material into paragraphs. He provides clearness for the whole by dividing it into convenient parts.

This selection of headings is called the *division* of the subject. It sometimes goes on while the material is being collected; sometimes not until afterward. In either case it is a process of thought, of reason. A hap-hazard division is not likely to prove helpful. Division demands intelligence and patience. It teaches systematic thinking. A good division is a mark of mental grasp. The masters of exposition, men like Huxley and Newman, have helped us all to understand more fully and think more clearly by such divisions of their subjects as group our ideas anew. They help us to sort our facts and ideas into groups that we did not see ourselves. What they have thus done by genius, great knowledge, and long training, every student may learn from simple beginnings to do with more and more intelligence. And the better he does it, the more grasp he gets of his own knowledge.

But the first thing to remember is that the division is for the benefit of the reader or hearer (page 3). It is a device for making the whole clear to some one else. This does not in the least make the process less valuable to the writer; it merely forces upon him the right point of view. A division is good in proportion as it helps a hearer or reader to follow. Another way of putting this is to say, Look for a simple, natural division. Some subjects seem almost to have their divisions ready made. For instance, the division suggested above for a theme on the Board of Health would occur to almost any one investigating the subject. Such obvious divisions are best for first attempts. They are the better for being simple; and they are sufficient for clearness. Make such a simple division of three or four parts for some of the following:—

1. The Federal Government.
2. The Duties of the Municipal Police.
3. The High-school Course.
4. The Foreign Population of Our Country.
5. The Election of the President.
6. The President's Cabinet.
7. Opportunities for a Young Man in ———.
8. The Panama Canal.

But though a division should always be simple in the sense of being easy to understand and follow, it is not necessarily good just because it is simple. It ought not to be superficial or merely formal. Almost every conceivable subject, for instance, may be divided into (1) advantages, (2) disadvantages. That division will usually kill all interest without helping clearness; for it is both superficial and formal. It is not a real division; it is only an excuse for one. Equally formal is a division into (1) introduction, (2) body, (3) conclusion. This again is not a real division; for what we need to have divided is (2). The introduction

can often be best adjusted after the rest is written or planned, and need not be a separate paragraph; the conclusion is merely the iteration at the end; but the theme cannot well be written at all until (2) is divided by some definite plan. Avoid superficial or formal divisions. Divide with your mind.

Divide one of the following subjects for an oral address of four or five paragraphs:

1. Why I Chose the Scientific (or the Academic) Course.
2. The Training of a Hospital Nurse.
3. Lumbering in Our State.
4. What a Tree Needs for its Growth.
5. The Effects of the New Rules in Football.
6. How a Play was Given in Shakespeare's Time.
7. Should the Public Library be Open on Sunday?
8. Our City (Town, or Village).
9. In What Ways Franklin Showed Himself a Typical American.
10. The Importance of the Battle of Saratoga.

(For other subjects, see the lists in Chapter ii. and below in the present chapter.)

So far as possible, these themes, or at least certain paragraphs of them, should be spoken to the class before they are written. (See the head-note to this chapter.) But first the outlines should be discussed and revised. (See pages 75 and 90 for discussion of reports and speeches in class.)

3. THE PARAGRAPH AS A STAGE

If these outlines are put upon the blackboard, you will find hardly any two alike for the same subject. That is natural and desirable; for, instead of trying to cover all possible topics in the time, each student will naturally select such aspects as he thinks he can handle with most clearness and interest. Indeed, the making of an outline, instead of being the dry and mechanical process that some

people fancy, opens room for originality. But the outlines will differ in another way which will give each student a chance to learn from every one else. Some will arrange their parts in clearer order (Review pages 86-90). They will lead on better from part to part up to the close. They will show a progress of thought. Such a progressive outline gives stronger coherence to the whole composition and stronger emphasis to each paragraph. For a good paragraph is something more than a part; it is a part in a certain place. *A paragraph is a distinct part of a composition planned for that place where it will best help along the whole.*

Plan, or Outline : the Order of Paragraphs. — The division of a subject into paragraphs, then, means first the choosing of certain parts to be treated separately, one by one. For clearness this is necessary, and sometimes it is sufficient. But if your address or essay is to have that stronger coherence which makes people follow because they feel that you are leading them ahead, you will not be satisfied with mere division into parts; you will seek to arrange those parts in an effective order. You will plan your paragraphs, not merely as parts, but as stages. A good paragraph is a stage in the progress of the whole.

✓ *Why I Chose the Scientific Course (1)*

1. It is more practical.
2. I like the manual work better than languages.
3. The English course is just as good.
4. The Manual Training High School ranks as high as the other high school.
5. I intend to be an engineer, because I see the best openings for me in that profession.

* *Why I Chose the Scientific Course (2)*

1. In general there is no choice as to rank, the teaching in the two being equally good.

2. In particular, the courses in English are equal in extent and excellence.

3. The decision is mainly because I can prepare more directly for my profession, that of engineer.

4. But, besides, I think a good guide is whether you get better training from manual work or from languages.

5. Thus the upshot of the whole to me is that the scientific course is more practical.

The Paragraph Subject a Complete Sentence. — The second of the outlines above is a revision of the first for coherence. Both have the same parts; but the second has a more thoughtful order. The paragraphs are so arranged that each leads better to the next, and so to the last. Now such a revision cannot be made surely unless each part of the outline, each of the future paragraphs, is expressed in a sentence.

- | | |
|--|--|
| 1. More practical. | 1. General rank. |
| 2. Manual training <i>vs.</i> languages. | 2. English courses. |
| 3. English courses. | 3. Engineering my profession. |
| 4. General rank. | 4. Manual training <i>vs.</i> languages. |
| 5. Engineering my profession. | 5. More practical. |

Set down thus, in mere words or phrases, the two outlines may seem equally good. Neither can be judged as to its coherence. For the connection between two ideas can be tested only by putting each into a sentence. Practically, therefore, *the subject of a paragraph is, not a word, nor a phrase, nor a clause, but a complete sentence.*

Thus the paragraph outline for the notes at page 160 needs to be thought out into sentences in order to test its progress.

✓ *What the Norman Conquest Meant to England*

PARAGRAPH OUTLINE

1. The Norman character broke up the English stay-at-home spirit.

2. It subjected everything English to the domination of the French.

3. The effect on the English language was, not to change its structure, but to widen its vocabulary.

4. The effect on English literature was to widen it by closer touch with the Continent.

This means, as a comparison with Chapter ii. will show, that a paragraph is in itself a brief whole. It is a complete unit. Some of the passages quoted in Chapter ii. are in fact paragraphs detached from their context. They are complete in the sense of being clear, each by itself. Each fully develops a single root sentence. Whatever else the author had to say he kept for other paragraphs. He gave clearness to his whole long composition by treating each part with separate completeness. If now any coherent, carefully planned speech or essay (not a story or description) be summed up by expressing each of its paragraphs in a sentence, such a summary will show from thought to thought the progress of the whole. The making of such outlines is excellent practice, both for study of the thought of others and for help in strengthening the coherence of your own speeches and essays.

Outline by Paragraphs for Analysis.—The following summaries show that this method, irrespective of subject or style, applies to any composition that has a clear progress of thought. They should be used generally as models, and particularly for the exercises indicated under each.

I. JOSEPH ADDISON: LABOR AND EXERCISE

Spectator, 115.

N. B. The paragraphs of this essay, as it is usually printed, are marked wrongly. It is good practice in such cases to correct the indentations so that they will correspond to the real paragraphs.

1. The health of country life comes from its opportunities for both kinds of labor — labor for bread and labor for exercise.

2. The very structure of our bodies suggests the necessity of labor to keep it in good condition.

3. And health of mind depends no less on bodily labor.

4. As our bodies invite labor, so the necessities of most men's lives compel it.

5. My friend Sir Roger, not being compelled to work for a living, resorts to hunting for exercise.

6. And riding, indeed, is an exercise most salutary for both sexes.

7. For my own part, when I am cut off from such opportunities in town, I find great profit in dumbbells and wands.

8. For, since I am both soul and body, I feel bound to care for both.

Adapt this outline, by omissions and substitutions, to a five-paragraph essay of your own on the same topic. Afterward read Addison's essay, to compare the methods of developing the several paragraphs.

Make a similar outline of Irving's *English Writers on America* or *Rural Life in England*. Notice that many other papers in the *Sketch Book*, such as *Rip Van Winkle* and *The Legend of Sleepy Hollow*, being narrative, are not developed by paragraphs, and consequently cannot be so outlined.

II. THOMAS DE QUINCEY: ON THE KNOCKING AT THE GATE IN MACBETH

1. For a long time I could not understand why the knocking at the gate after the murder of Duncan reflected back upon the murder a peculiar awe.

2. My failure to understand it did not make it the less awful.

3. But at length I saw that it draws our attention from the murder itself to the feelings of the murderers.

4. For it shows their fiendish passion by the sharp reaction toward their better selves.

5. Thus even in his least details Shakespeare shows his greatness.

From study of the play, develop this outline into an oral address of five minutes. If you find little to say on 2, for instance, com-

bine it with 1. If 5 in your treatment is only a brief summary, make it the close of 4. Thus your address will have three paragraphs. Afterwards read De Quincey's essay, to compare the methods of developing the several paragraphs.

III. T. H. HUXLEY: HOW THE SEA ATTACKS THE COAST

Physiography, an Introduction to the Study of Nature, first four paragraphs of Chapter xi.

1. The sea, by rolling the shore pebbles back and forth, is always wearing the strand into sand.
2. The sea even attacks the shore cliffs with their own fragments.
3. In a storm this attack on the cliffs is equivalent to bombarding the coast with its own ruins.
4. The destruction is thus accomplished, not by mere water, but by water carrying stones.

(incomplete)

Make a similar plan for an oral address on some other common natural phenomenon; e.g., clouds, tides, icebergs. Write this out afterward as an essay.

IV. GIFFORD PINCHOT: WHERE TREES GROW

A Primer of Forestry, Part I, first twelve paragraphs of Chapter ii.

1. Where a tree will grow depends upon its native qualities.
2. The regions for certain races of trees, as for certain races of men, is partly determined by temperature.
3. In the same way temperature determines the distribution of trees over smaller areas.
4. In both cases distribution is also determined by moisture.
5. But the thriving of a particular tree, as distinct from a whole species, depends much more on its ability to bear shading by other trees, i.e., upon what is called its tolerance.
6. Tolerance thus determines how many trees of a given kind will grow in a given forest.
7. Tolerance depends, not only on how much light a tree needs, but also on what kind of light and on how fast the young shoot naturally tends to grow.

8. Thus, of two intolerant trees, that one will survive which grows faster.

9. And the rate of growth depends again largely on the place.

10. Again, a species will multiply according to whether its seeds are so heavy as to drop or so light and winged as to be carried by the wind.

11. The character of the seeds thus largely determines whether a species will be found grouped together or scattered.

12. And this, together with the other conditions mentioned before, makes certain whole species always grow together in one tract.

Select such parts of this as you can most readily develop into a connected oral exposition of about five minutes.

Outline by Paragraphs for Practice.—Prepare an oral address of five or six minutes according to the paragraph plan indicated for each of the subjects assigned from the following list. Develop each paragraph fully, close it with an emphatic iteration of its subject, and pause before beginning the next. Revise this address as a written theme. The outlines may also be adapted in ways such as those suggested in the preceding section.

I. OUR MANUAL TRAINING HIGH SCHOOL FILLS AN IMPORTANT PLACE IN THE COMMUNITY

1. The courses combine general education with manual courses of several kinds and grades.

2. The object is to give the technical training that used to be gained by apprenticeship to a trade.

3. Thus it opens a career to many who might otherwise waste themselves in minor business positions.

4. But it has the wider object of giving such general training as is not provided by the study of books—the training of eye and hand.

5. Thus it serves the state by broadening the capacity of future citizens for civic usefulness and the appreciation of the beauty of good craft.

II. WHY AMERICAN GIRLS PREFER FACTORY WORK TO DOMESTIC SERVICE

1. There are few native-born American girls in domestic service, and many in factories.
2. Domestic service is generally easier, more healthful, and, since a domestic servant receives board and lodging besides money wages, generally better paid.
3. But a domestic servant has less liberty of time and action.
4. Above all, she is generally regarded as an inferior.
5. So it is clear that most American girls value most highly independence and equality.

III. HOW IRRIGATION HAS INCREASED THE NATIONAL WEALTH

1. A map of the westward progress of our settlements shows a check at the borders of far-reaching arid lands.
2. As fertile lands became scarcer, it was discovered that some of these arid lands were naturally fertile, and that water could be brought.
3. The experiments of individuals and private companies proved farming by irrigation to have many advantages over the old farming.
4. The federal government has now recognized irrigation as a national concern.

With abundance of material, 3 may be divided into two or three paragraphs in order to discuss the advantages separately with greater fulness; and this in turn may lead to the making of two themes, one including 1, 2, and the general idea of 3, the other developing fully 3 and 4 in several paragraphs.

IV. THE ————— BILL

(Select a bill, now before Congress or your State legislature, about which you have some information and interest.)

1. The object of this bill is ————. (Explain why the measure is proposed.)
2. Its main provisions for carrying out this object are ————. (Instead of quoting at length, give a concise summary.)

3. Thus it is supported by _____ because of _____, and opposed by _____ because of _____.
4. Our interest in it here is _____.

V. SUNDAY BASEBALL

1. The question as to Sunday baseball arises from two quite different views of Sunday: (a) that the day ought to be observed with religious quiet and decorum; (b) that the day ought to give recreation to those who work all the week. (Develop this paragraph by contrast.)

2. The first view comes from New England traditions of our older, American-born citizens; the second, from the European traditions of our increasing foreign-born population. (Develop this paragraph by contrast and instances.)

3. Both these views have partially failed in practice: (a) the old "blue laws" as to the "Sabbath" are no longer generally accepted; (b) the idea of "the continental Sunday" has sometimes led to license, given opportunity to rowdies, and tended to make the day a noisy holiday.

4. Thus, if both parties claim too much, the law might in fairness to both permit baseball on Sunday afternoon.

5. And the individual boy or man can help his community by taking his Sunday exercise (a) only so far as his week-day work demands, and (b) in such ways as not to disturb others.

This subject may also be divided and adapted for debate. First frame a proposition (page 105) which shall clearly express the issue. Instruction in debate will be found in Part II., Chapter vii.

VI. THE NEED OF AN ISOLATION HOSPITAL

1. Modern science has shown that contagious diseases are preventable.

2. So the Board of Health placards houses where any one has scarlet fever, diphtheria, etc.; *i.e.*, isolates each case to prevent the spread of the disease.

3. But this method of isolation is imperfect, especially in crowded districts.

4. A far more effective precaution is isolation in a special hospital.

5. The prejudice against having a "pest-house" in one's own district is unreasonable.

6. So we should all help to show as many doubters as possible the great advantages of such a hospital to everybody.

This should serve as a model for the discussion of some actual present local issue.

VII. SHYLOCK WAS WRONGED

1. The fact that we do not feel like crowing with Gratiano when Shylock leaves the stage for the last time shows that we have some sympathy with Shylock.

2. This is partly because, so long as the court had admitted the bond as valid, it was mere quibbling to rule that the pound of flesh must be without blood.

3. And the sentence on Shylock was excessive to the point of cruelty.

4. Like the sentence, all the actions of the Christians toward Shylock throughout the play show a bigoted ignoring of his rights and feelings.

5. Therefore we cannot but feel that Shylock was the victim of the intolerance of his time against his race.

Prepare an outline and develop an address to show on the contrary that Shylock was not wronged. In this way the subject may be brought into debate, as may also the questions whether Brutus should have joined the conspiracy, whether Lady Macbeth was a virago, and any other topics of current discussion in the course of literature.

Such practice in writing from an assigned outline by paragraphs cultivates a habit of orderly presentation, of progressive plan, — in a word, of coherence. It may be continued as long as it seems helpful; it is the converse of analyzing an address, magazine article, or chapter, which impresses you by its coherence; but its whole object is to lead you into such plan-making of your own.

The United States naval station at Guam, a small island in the

Pacific, receives from San Francisco a daily summary of news by cable. As your part of this summary, prepare an outline by paragraphs of one or more of the following:—

1. An Important Speech by _____.
2. The _____ Bill (introduced in Congress).
3. The Report of the _____ Association (or Committee).
4. The Reasons for the Spread of Legislation Prohibiting Saloons.
5. This Year's Wheat Crop.
6. The Progress of Our Navy.

The outline should be made from an article conspicuous for its clear coherence. Then by writing the subject-sentences consecutively, with proper connectives, a summary can be made at once concise and justly proportioned. Digests for report, *e.g.*, in history, may often be made in the same way.

4. THE PARAGRAPH ADJUSTED TO ITS PLACE

Coherence of the Whole Secured by Paragraph Emphasis.

— A paragraph, then, is a complete part of a longer composition. Being complete, it is unified within itself as a short whole theme is unified, and developed as a short whole theme is developed (pages 64–76). Being complete, it is also emphasized as a short whole theme is emphasized. Emphasis at the paragraph end, moreover, is important for another purpose; it is the greatest help to the coherence of the whole composition. No better help can be given to the progress of the whole than a clear emphasis of each part. Nothing can make it easier for a hearer or reader to take up the next point than to have strongly in mind the point you are just leaving. When you pause in speaking, or make a space in writing, the hearer or reader needs to have firmly fixed in mind the point of that paragraph. If he is sure of this, his mind is open for the next paragraph; if he is not sure, if you have not brought the point home, instead

of following you readily into the next paragraph he will be guessing about the last one. His attention is divided, perhaps lost. There is no more fruitful cause of incoherence than loose paragraph ends; there is no better help to coherence than firm paragraph ends. A reader, and still more a hearer, needs to know exactly where he is at the end of each paragraph. For *a main object of emphasis at the end of a paragraph is to show the relation of that paragraph to the whole composition.*

See how this works out in the practice of clear speakers and writers to knit the whole together.

I. PHILLIPS BROOKS: THE FOURTH OF JULY

Epilogue to a sermon on *The Candle of the Lord*

Paragraph 1. *Subject* (Introduction)

The birthday of our nation claims your sympathetic regard because to-day a nation is the making-place of men.

My friends, may I ask you to linger while I say a few words more (*Link*) which shall not be unsuited to what I have been saying, and which shall, for just a moment, recall to you the sacredness which this day, the Fourth of July, the anniversary of American Independence, has in the hearts of us Americans? If I dare, generously permitted as I am to stand in the venerable Abbey, so full of our history as well as yours, to claim (*Subject*) that our festival shall have some sacredness for you, my claim rests on the simple truth that to all true men the birthday of a nation must be a sacred thing

.

(Close) "Show us your man,"
 land cries to land.

Paragraph 2. *Subject*

Your interest in our birth-
 day is the higher interest of a
 mother in her son.

(Link) In such days (*Subject*)
 any nation, out of the midst
 of which God has led another
 nation as He led ours out of
 the midst of yours, must surely
 watch with anxiety and prayer
 the peculiar development of
 our common humanity of which
 that nation is made the home

.

(Close) the mother-land will
 surely lose the thought and
 memory of whatever anguish
 accompanied the birth, for grat-
 itude over the gain which hu-
 manity has made, "for joy
 that a man is born into the
 world."

Paragraph 3. *Subject*

So I ask, not your praise for
 my country, but your prayer.

(Link) It is for me to glorify
 to-night the country which I
 love with all my heart and soul.
 (*Subject*) I may not ask your
 praise for anything admirable
 which the United States has
 been or done. But on my
 country's birthday I may do

something far more solemn and
more worthy of the hour, I
may ask for your prayers in
her behalf

.
.
.

(Close) Because you are Eng-
lishmen and I am an Ameri-
can; also because here, under
this high and hospitable roof
of God, we are all more than
Englishmen and more than
Americans; because we are all
men, children of God waiting
for the full coming of our
Father's Kingdom, I ask you
for that prayer.

Make a similar outline for an oral address on *How We
Americans Should Keep Our National Holiday*.

II. T. H. HUXLEY: ^{1/2}HOW EARTHQUAKES LIFT THE CRUST OF THE
EARTH

Physiography, an Introduction to the Study of Nature, first four
paragraphs of Chapter xii.

Paragraph 1. *Subject*

Many constant physical agen-
cies tend to put the earth's
crust entirely under water.

(Subject) Rain and wind, frost
and thaw, wind and wave,
however much they may differ
among themselves, agree in
this — that they are, upon the
whole, slow and certain agents
of destruction

.

(Close) If, therefore, no hin-
drance were offered to the ac-

tion of these agents . . . all the dry land in the world would ultimately disappear beneath one universal sheet of water.

Paragraph 2. *Subject*

But these agencies are counterbalanced by the tendency of earthquakes to lift the crust out of water.

(*Subject and link*) It is not difficult, however, to detect in the operations of nature counterbalancing forces which are capable of upheaving (The) most important (are) earthquakes and volcanoes. . . . (*Close*) Sometimes, it is true, the surface is depressed; but more commonly the movement is in the direction of elevation.

Paragraph 3. *Subject*

Such upheavals have evidently raised the greater part of the coast of South America.

(*Subject and link*) Perhaps the best recorded example of such an upheaval is that which was observed by Admiral Fitzroy and Mr. Darwin . . . (Here follow several instances, and the inferences from them.) . . . (*Close*) It is considered probable that the greater part of the South American coast has been raised several hundred feet by a succession of such small upheavals.

Paragraph 4. *Subject*

One such upheaval may be sufficient to counterbalance the destructive effect of rain, surf,

(*Subject and link*) When an area is thus raised, the addition suddenly made to the mass

etc., for a considerable period. of dry land may be very considerable, and will compensate for the effects of denudation continued through a long period . . . etc.

(Incomplete)

III. DR. LUTHER N. GULICK AND HARRY J. SMITH: DANCING AS A PART OF EDUCATION

The World's Work, October, 1907, vol. xiv. 9445, first eight paragraphs of the article.

1. *Subject*

City children, more than any other children, need play.

Introduction, explaining the final organization in New York City.

(*Subject*) Manhattan children — and this is true of the children of all congested cities — have almost no place in which to play except the streets; but, of all children in the world, city children have the greatest need for healthy play . . .

(*Close*) Five hours a day in the schoolroom, and then the crowded, ill-ventilated tenement or apartment house, with perhaps a game of tag or hopscotch or jump-rope in the midst of the hubbub and dirt of the street, make up the life of the average city child.

2. *Subject*

The first step toward meeting this need in New York was to use the school gymnasiums out of school hours.

(*Subject and link*) Some school buildings possess gymnasiums and playgrounds; but out of school hours they do nobody

any good. Here was the opportunity

(Close) The school board granted it the privilege of utilizing the splendid new gymnasium equipment.

3. Subject

But the mere privilege of playing in the gymnasiums out of hours will not reach the weaker and shyer children.

(Link) The next question was one of method — how to get the best results out of the opportunity. (Subject) Experience has demonstrated . . . that a hundred children cannot be turned loose . . . with any assurance of benefit to all . . .

(Close) Yet these are the very children who most need the exercise.

4. Subject

For organized play is better than free play.

(Subject and Link) Organized play of some sort, play under control, is the only possible solution; for organized play is freer than "free play" . . .

(Close) In organized play, where every child is a unit in a larger, mutually responsible, and mutually responsive whole, all reach a higher and more significant stage of individual freedom than is possible on the unorganized, free-for-all playground.

5. *Subject*

Nor will gymnastics meet the larger demands of play.

(*Link*) The problem to be worked out, then, was to find the form of organized play which would bring the greatest amount of good to each child. (*Subject*) Careful tests have proved that it could not be found in gymnastics . . .

(*Close*) Play is far more important than mere muscular activity. It is the most natural and the most potent expression of the child's personality. The future lies in it.

6. *Subject*

Dancing, among other recommendations, has this, that it is not, like gymnastics, perfunctory.

(*Subject and Link*) When the proposal was made to take up dancing in schools as an exercise for girls, three things were said in its favor . . .

(*Close, third point*) The children (elsewhere) had become enthusiastic about it. That was a strong argument; for . . . the object of the undertaking was primarily to develop the play spirit. Anything perfunctory would therefore defeat its own ends.

7. *Subject*

So dancing was tried as an experiment.

(*Subject and Link*) So the experiment was made merely as an experiment . . .

(Close) It took real conviction and hard work to win a place for it and to get it under way.

8. *Subject*

Already dancing has proved itself an answer to the need.

(Link, by contrast, and Subject) Less than a year has passed; but already the number of classes has grown to sixty-eight, and between two and three thousand children are getting instruction . . . etc.

(Incomplete)

Analyze in this way Irving's *English Writers on America* or *Rural Life in England*, noting any places where the printer seems to have put a paragraph space in the wrong place.

Both paragraph emphasis and transition (see the section following) are more marked in oral composition, because they are more important as a means of clearness when the coherence can be caught only by the ear. The need of them is greater also in proportion as the composition is more argumentative; for in argument nothing is more important than the connection. Therefore the best practice toward this particular skill is given by connected oral argument, not mere brief rejoinder in impromptu debate, but a sustained argument involving several steps. Since this is too taxing for many pupils at this stage, the idea is often better enforced by analysis, as above. Students who are ready for somewhat extended argument, may use any available subject in this chapter or in Chapter ii. as the basis for a proposition, to be developed, not by debate, but by a single speech on one side, or on one group of points. But both these and those who prefer exposition should practice the following order of preparation for at least one theme:

(1) Limit the subject to what can be developed fully in five or six minutes. If you are to argue, the subject must be cast in a definite and complete sentence.

- (2) Divide the material into paragraphs.
- (3) Express the gist of each paragraph in a subject sentence.
- (4) Arrange the paragraphs in the order easiest to follow.
- (5) Write the beginning and the end of each paragraph, so that the outline will look like the analyses above.
- (6) Develop the body of each paragraph orally without writing.
- (7) Speak the whole address connectedly with the outline before you.

Whether writing out is assigned afterwards or not, do not write out before speaking. The process should be started far enough in advance to insure time for thought, practice, and discussion in class at several stages of preparation. One composition of this kind worked out well is worth three dashed off hastily.

Most of the following additional subjects suggest exposition rather than argument, but are adapted for oral discussion:

- | | |
|---|---|
| 1. Night Schools. | 10. School Yards as Vacation Playgrounds. |
| 2. Our Indian Wards. | |
| 3. The Education of the Street. | 11. Boone as a Type of American Frontiersman. |
| 4. The Future of Alaska. | 12. The Preservation of Our Forests. |
| 5. The Search for the Pole. | 13. The American Ideals of Jefferson. |
| 6. Father Damien. | |
| 7. The George Junior Republic. | 14. "The White Plague." |
| 8. My Vocation. | 15. Montcalm and Wolfe. |
| 9. What our Italian Immigrants Can Do for Us. | 16. The Achievements of Lewis and Clark. |

Coherence of the Whole Confirmed by Words of Transition.

—The outlines in the preceding section show the progress of the whole from part to part. They exhibit each stage in its relation to the whole. And they show something else. The opening of each paragraph, while it announces the new paragraph subject, refers to the preceding paragraph by some word or phrase or clause or even sentence of connection. These link-words complete the chain of

The new problems arising in longer expositions or arguments, then, are problems of coherence. The solution is, first, to divide the subject into paragraphs; secondly, to arrange the paragraphs according to a progressive plan; thirdly, to develop each paragraph so that it closes emphatically upon its point; finally, to indicate at the beginning of each paragraph its connection with the preceding. For coherence in longer expositions and arguments means planning by paragraphs and adjusting them to fit.

SUMMARY OF THE CHAPTER

1. The principle of unity applying to longer compositions merely with less strictness, and the principle of emphasis without any modification at all, the most important practical consideration in longer compositions is coherence.

2. The first step in planning for coherence is to divide the subject into paragraphs. A paragraph is a certain part of a subject, set off in the plan to be discussed by itself.

3. The second step is to arrange the paragraph subjects in such order as will help an easy following from each to the next. A paragraph is a distinct part of a composition planned for that place where it will best help along the whole. Hence its subject must be expressed in the plan as a sentence.

4. After the whole is thus planned, each paragraph is developed and emphasized in the same way as a separate short composition. Good emphasis in each paragraph also serves directly the coherence of the whole composition.

CHAPTER V

REVISING FOR CLEARNESS: SENTENCES

For themes in connection with this chapter see the head-note to Chapter iv. Exercises in revising sentences should be based, not only on the passages quoted in the text, but regularly on the current themes.

1. SENTENCES STUDIED IN REVISION

THE whole having been planned by paragraphs, and each paragraph having been adjusted as a definite stage of progress, it is time to revise the sentences. Good paragraphs come from prevision; but good sentences come from revision. The way to learn clearness and force of sentence-form is to rewrite. For it is hard and unprofitable to think of sentence-form during the writing of the first draft. The important thing then is to put a statement where it belongs, not to put it in a certain form. The line of thought is quite enough to absorb attention. During the first writing, therefore, instead of hesitating over the form of a sentence, compose as fast and as freely as possible with your mind bent on the thought of the paragraph. Then, when the paragraph is at last a group of sentences, revise every sentence that does not fit its place.

So in speaking, the first consideration is to keep on. If in the middle of a sentence you think of a better form, never mind. Finish the sentence nevertheless as you started it. For if you stop in order to start it differently, you tend to annoy and confuse your hearers and to lose your thread. Keep on to the end of the paragraph. Then, if you are

practicing alone, go back to revise; if you are speaking in public, simply remember the weak sentence, to avoid that kind in the future.

It is precisely because speaking gives less opportunity for revision that sentence-form must be studied mainly through writing. We all expect of writing more careful, more deliberate sentences. We assume that a writer has settled on just the form he intends. We expect him to revise. Now every time he revises he grooves deeper a channel of good habit. The sentences of his first drafts become clearer and stronger because he has thus, as it were, grooved straighter channels for his thought. He speaks in better sentences because he has revised his writing; and for the same reason he writes better sentences before revising than as a beginner he wrote after revising. But the most expert writers never cease to revise their sentences. More corrections of this kind are made in printers' proofs than of any other kind. All experience, therefore, makes plain that in matters of sentence-structure the way to learn to write is to rewrite.

2. MAKING IMPROPER COMPOUND SENTENCES COMPLEX

The revision of any sentence has to solve one of two problems, and sometimes both: (1) to make the sentence clear by itself; (2) to make it strong in support of its neighbors. The ways of achieving the first have already been discussed (pages 8-9); but special attention should be turned at this point to the weeding out of improper compound sentences. Improper compound sentences, sentences in which the parts are co-ordinate in form though one of them is subordinate in meaning, arise sometimes from haste. They are quite pardonable in a first draft. But they arise also from thinking loosely. To recognize them and correct them is an exercise not so much in writing as

in thinking. It is a sign of intellectual growth. Children habitually speak in such loose compound sentences because they are not old enough to subordinate one idea to another. And in this the childhood of a language is like the childhood of a man. The earlier prose writing of any nation is full of such loose compound sentences, because the language has not yet grown up to fine logical distinctions. In children and in old prose we expect this. It is natural. But as the prose of a people grows with the people's intellectual life, it makes larger and larger use of complex sentences. So it should be with your own writing. Slowly, but surely, you ought to revise such a compound sentence as this,

Brutus did not know human nature, and his speech failed.
to a complex sentence,

The speech of Brutus failed because he did not know human nature.

For it is a sign of intellectual growth to subordinate in form what is subordinate in thought.

In the passages quoted from R. H. Dana at pages 68 and 78, find improper compound sentences and make them complex. When you find such sentences in notices, advertisements, or elsewhere, copy them for correction on the blackboard.

3. PUTTING THE RIGHT WORD AT THE END

The second problem for revision is to make each sentence strong in support of its neighbors. This, as the words imply, is a problem of emphasis. As emphasis is given to a paragraph by giving prominence to its main idea, so emphasis is given to a sentence by giving prominence to its main word. This is felt most clearly in speaking. The following sentences express each thought in two different forms. Which of the pair is easier to stress properly with the voice?

I

(1) The first thing that strikes us is the lack of scenery in this reproduction of the Elizabethan stage.

(2) The first thing that strikes us in this reproduction of the Elizabethan stage is the lack of scenery.

II

(1) The captain's absolute power sometimes led to petty tyranny in the old days of sailing vessels, according to Dana's *Two Years Before the Mast*.

(2) According to Dana's *Two Years before the Mast*, the captain's absolute power in the old days of sailing vessels sometimes led to petty tyranny.

III

(1) The idea of the Forest Service is to have lumbering economically done, not to prevent lumbering.

(2) The idea of the Forest Service is, not that lumbering should be prevented, but that it should be done economically.

In each pair the second is easier to speak because the voice falls with less effort on the main word; for the main word stands at the end. Since the voice naturally falls at the end, since that is the natural place of stress and pause, the best economy is to put there the word or phrase that you wish to emphasize. If, instead, you leave at the end some less important part, you cannot stress the word you wish to stress without slighting the close. The close then sounds feeble. It does not satisfy the ear. Sentence emphasis means, Put the right word at the end.

Ending with the most Important Word of the Sentence. — But which is the "right" word? Which is the "main" word? In every sentence, considered by itself, some words carry more of the thought of the sentence than others. In the examples above, such words are: I. *lack of scenery*, II. *tyranny*, III. *economically done . . . prevent*. The object

of the sentence is to make these words stand out so conspicuously that the hearer or reader cannot miss them. These, therefore, are the "right" words to put at the end. And when, as in III. above, two such words are compared or contrasted, the revision of the sentence must take care, (1) that the contrast shall be brought out by parallel form, and (2) that the more important of the two shall come last. In a word, end the sentence with its point. The point of I. is *lack of scenery*. To put the phrase *in this reproduction*, etc., after it is to defeat emphasis in speaking or ease in reading, to deceive the ear or the eye. The point of II. is *tyranny*. To hide it in the middle is to make the whole sentence lag. The point of III. is *done economically*. First, the two contrasted ideas, *prevented* and *done economically*, are made parallel in form in order to bring out the contrast (see page 198); secondly, the negative one is put first in order to end the sentence positively. The right word, then, to put at the end of the sentence is the word that carries the main thought or point.

Emphasis Defeated by Redundancy. — Sentence emphasis is often defeated by a superfluous addition.

So with trees; their needs are different according to the different varieties *that we find*.

The italicized clause adds nothing to the sense. It merely blunts the end of the sentence, making the voice linger after the point. Emphasis is thus defeated by redundancy. For compactness and directness, the sentence should be revised to read:

So the needs of trees differ according to their varieties.

The following is another instance of emphasis defeated by redundancy.

Even when the game is a very exciting one, the spectators may

find their patience tried by waiting on account of accidents that happen in the course of the game.

Here any one can see that the repetition of *game* is unnecessary. Repetition emphasizes; and here it emphasizes the very word of the whole sentence which should not be emphasized. To emphasize the wrong word is quite as bad as not to emphasize the right one. The remedy sometimes proposed is to avoid repetition by substituting for *game* some synonym — say *contest* or *struggle*. But this change does not in the least improve the emphasis. It does not even remove, but merely covers, the false repetition. In all such cases the remedy is to change, not the word, but the construction. In the sentence above the revision is quite simple. The whole final clause, like the one in the sentence preceding, is superfluous. An *accident* is necessarily something *that happens*; and of course it happens *in the course of the game*. By the omission of this whole clause the sentence ends with the right word, *accidents*. Further, *a very exciting one* means no more than *very exciting*. All such *a . . . one* combinations are redundant. Finally, *patience tried* is sufficiently implied by *waiting*. The revised form, then, would be:

Even a very exciting game may weary the spectators by the waits for occasional accidents.

Redundancy, therefore, though it may be corrected sometimes by omitting superfluous words, demands in other cases the recasting of the whole sentence.

In the following, strike out superfluous words and revise redundant constructions.

There are many who will condemn your ruling as one that is influenced by fear of certain powerful interests.

This species, which is of a deep red color, is much more rarely found.

The transaction was of a very reprehensible character, and should be condemned at the polls.

After the war was over, the State found itself in a poverty-stricken condition.

There is another thing which is very significant in this report.

There is a large number of men who keep the stores and deal with the lumbermen.

It sometimes happens that even the most careful plans prove themselves to be ill adapted to the situation as it actually presents itself.

Though his career was a brilliant one, many obstacles that he found in his way prevented it from becoming a complete career.

Exercise in selecting the important words and in omitting everything superfluous is pushed to the extreme in telegrams and advertisements. These do not require even complete syntax; they are communication reduced to its bare essentials. Only so much of a sentence need be given as is necessary to clear understanding. Connectives, even subject or predicate, may be omitted, but only when the omission leaves no room for confusion or ambiguity.

The following examples may be freely adapted, and should suggest others; but the assignments should be the same for all, in order that comparison may be made on the blackboard.

You have left in a certain train a black silk bag containing opera glasses, a handkerchief, and tickets to a football game. In a telegram of the fewest words possible ask the station agent at the terminus to express it immediately at your expense to you at ———.

On your way to your hotel at ——— your purse has been stolen. In a telegram of ten words ask your father to send you a telegraph money-order for ——— dollars, enough to pay your hotel bill and buy your homeward ticket.

You have received by telegram the offer of a position for six weeks as time-keeper of a construction gang on a certain bridge at twenty dollars a week. Accept in a telegram of ten words,

repeating the essentials of the terms, and indicating, as you have been requested to do, that you will report for duty on the evening of the 20th.

Write in the fewest words consistent with clearness an advertisement for each of two cases following. The general character of the advertisement will be indicated by the heading of the column in which it is to be printed; *e.g.*, *Help Wanted: Males*.

A family living in the suburb of —— wants a man to take care of the furnace, yard, and sidewalk. He must give references as to his character and ability. Application should be made in person to —— at —— between nine A.M. and noon.

A doctor wants a boy to answer the door-bell and the telephone and keep the office in order during certain hours. Luncheon and office coat will be provided. The boy must be neat and quick, write a good hand, and give satisfactory references as to his character. Application should be made in writing to Dr. —— at ——.

A dentist wants a woman of education and refinement to take charge of his office, receive his patients, and make appointments daily from nine to noon and from two to six. She is also to have charge of his accounts. References are required as to experience in all these matters and as to character and ability in general. Application should be made in writing to Dr. —— at ——.

The position of stenographer and typewriter to Messrs. ——, Attorneys, offers a salary of \$1200 a year to a thoroughly experienced woman, and requires accuracy in copying extracts and preparing papers, as well as in receiving dictation. Application should be made by letter stating experience and references.

Ending with the most Important Word for the Paragraph.

— But the principle of ending positively with the word or phrase that carries the thought will not always suffice, if a sentence be regarded entirely by itself.

(1) The marvelous promptness of a fire company is due to the precision of its drill.

(2) The precision of drill gives a fire company marvelous promptness.

Which form is better? One sounds and looks as effective as the other. Evidently the important words are *promptness* and *precision of drill*; but which is the more important? No one can decide from the sentence taken by itself. But any one can decide by the relation of that sentence to the paragraph. Suppose that it is the opening sentence of a paragraph, that the paragraph deals with the fire drill, and that the preceding paragraph has developed by instances a fire company's marvelous promptness. At once the choice falls on form (1); for this form by putting *promptness* first would link with the preceding paragraph, and by putting *drill* last would emphasize the subject of the present paragraph. Suppose, on the other hand, that the preceding paragraph has shown the precision of drill, and that the present paragraph shows how this results in marvelous promptness. At once, for the same reasons, the choice falls on (2). And sentences in the body of the paragraph can often be adjusted by the same principle: *emphasize at the end of a sentence that part which is most important for carrying on the thought of the paragraph*. The "main" word or phrase, the "right" part to make stand out, is that part which is most important for the progress of the paragraph.

The revision of a sentence for emphasis, then, is determined, not only by the point of that sentence, but also by its relation to its paragraph. The object of revision is to adjust a sentence to its context, to make it fit. For somewhat as the emphasis of a paragraph helps the coherence of the whole (page 172), so the emphasis of a sentence may help the coherence of the paragraph.

Link the following sentences more closely by transposing *new pair* to the beginning of the second sentence:

He was driven from the quadrangle of Christ Church by the sneering looks which the members of that aristocratical society cast at the holes in his shoes. Some charitable person placed a new pair at his door; but he spurned them away in a fury.

Compare the following by reading them aloud:

The first cause of the spirit of independence in the American Colonies is their English descent.

(1)

First, the descendants of Englishmen settled the colonies. Freedom, Sir, was formerly adored in England, and is still respected, I hope. The colonists emigrated from you when this part of your character was most predominant, and they took this bias and direction the moment they parted from your hand. Liberty according to English ideas and on English principles, therefore, not mere liberty in general, is the idea to which they are devoted. Abstract liberty is not to be found any more than any other mere abstractions. Some sensible object must be the test of liberty, etc.

(2)

First, the people of the colonies are descendants of Englishmen. England, Sir, is a nation which still, I hope, respects, and formerly adored, her freedom. The colonists emigrated from you when this part of your character was most predominant, and they took this bias and direction the moment they parted from your hands. They are therefore devoted, not only to liberty, but to liberty according to English ideas and on English principles. Abstract liberty, like other mere abstractions, is not to be found. Liberty inheres in some sensible object, etc.

—BURKE, *Speech on Conciliation with America.*

In the first form above, the difficulty of bringing out the line of thought is due to the difficulty of stressing the right word, even of knowing which word to stress; in the second, the form written by Burke, all this difficulty is smoothed away by careful sentence emphasis. The voice falls natu-

rally on the important words, because these words stand at the end. Yet hardly a word is changed otherwise. The whole difference in paragraph coherence is due to sentence emphasis.

Other Means of Adjusting the Sentence to the Paragraph. -- Thus the practice of beginning a paragraph with its subject, linked to the preceding paragraph by repetition of an important clause, and of ending a paragraph with an iteration (page 182), to be taken up in turn as the link of the next paragraph, — all this may be applied also to sentences. But it should be applied to sentences less strictly. It is useful sometimes, not always. For there is no need of linking every sentence as we link every paragraph. Not every sentence carries the thought forward. Some must give pause for iteration; some must bring in instances or illustrations. Otherwise we should go ahead too fast. Otherwise speaking and writing would be reduced to mere argumentative outline, dry bones without meat. Now these frequent sentences of instance, illustration, or iteration often need no link at all. Their connection is plain enough without. And the link, even when one is desirable, need not always be a link of repetition. It may be simply a conjunction (*but, nevertheless, besides, etc.*) or a demonstrative (*here, there, thus, this, those, etc.*). Care in the choice of such link-words is an important part of precision. To attempt linking by repetition of an emphatic close in all cases would make composition mechanical and tiresome, or even impossible.

In the following passage, the linking of sentences through the repetition of an emphatic close is indicated, wherever it occurs, by italicizing both the close of the preceding sentence and the opening of the following one.

Dr. Johnson in his latter days became above all a talker.

1st sentence, link with preceding paragraph.

2d sentence, linked to first by repetition.

3d sentence, iteration of 2d, without link.

4th sentence, instances without link.

5th sentence, introducing new aspect.

6th sentence, linked to 5th by repetition.

7th sentence, iteration of 6th without link.

8th sentence, instances without link.

But, though his pen was now idle, *his tongue was active*. The influence exercised by his conversation, directly upon those with whom he lived, and indirectly on the whole literary world, was altogether without a parallel. His colloquial talents were indeed of the highest order. He had strong sense, quick discernment, wit, humour, immense knowledge of literature and of life, and an infinite store of curious anecdotes. As respected style, he *spoke far better than he wrote*. Every sentence which dropped from his lips was as correct in structure as the most nicely balanced period of the "Rambler"; but in his talk there were no pompous triads, and little more than a fair proportion of words in -osity and -ation. All was simplicity, ease, and vigour. He uttered his short, weighty, and pointed sentences with a power of voice and a justness and energy of emphasis of which the effect was rather increased than diminished by the rollings of his huge form, and by the asthmatic gaspings and puffings in which

9th sentence, new aspect,
linked by conjunction *nor*.

10th sentence, linked to 9th
by repetition.

11th sentence, linked to 10th
by repetition.

the peals of his eloquence generally ended. Nor did the laziness which made him unwilling to sit down to a desk prevent him from *giving instruction or entertainment orally*. To discuss questions of taste, of learning, of casuistry, in language so exact and so forcible that it might have been printed without the alteration of a word, was to him no exertion, but a *pleasure*. He loved, as he said, to fold his legs and have his talk out, etc.

—MACAULAY, *Life of Samuel Johnson*.

Macaulay is usually quite careless of these means of paragraph coherence. Sometimes his paragraphs are quite abrupt, the sentences standing almost detached, save for an occasional *and* or *but*; sometimes the connection is managed entirely by sentence emphasis. In the passage above an emphatic close is repeated as a link for the next sentence only when such linking seems important; and the repetition is rather the taking up of the same idea in other words. Burke repeats the very word, and in general repeats oftener, because his composition proceeds more logically. For this device is more useful in argument, and most useful in argument that is spoken. In written essays, though it is often of great service, it is not generally so important. See the paragraphs quoted at pages 202-206 below.

We sometimes hear that *and* should not be used to begin a sentence. Though this cannot be urged as a rule of correctness, it is on the whole good advice. Only, the real offender is not the *and*; it is the construction. Good writer

use *and* at the beginning of a sentence; but they use it seldom, because the connection between their sentences is usually more definite. If sentence follows sentence at any length with no more definite relation than can be expressed by *and*, the thought must be loose or the composition hasty. Use *and* only when you mean *and*; and see that you do not mean it too often. A further objection is that no one can use *and* often to begin a sentence without confusing the distinction between a sentence and a clause. There will be no marked difference between what he writes as separate sentences and what he writes as co-ordinate clauses. For the sake of clear thinking, therefore, first see whether the *and*-sentence should not be a clause; secondly, if you mean it for a sentence, see whether it should not have a more precise connective.

Explain, with instances, the application of the following conjunctions as used to introduce sentences: *thus, also, nor, then, well, yet, hence, moreover, nevertheless, so, therefore, further, though, besides, likewise, now, else, but, accordingly, still, however*. Arrange them in three groups according to similarity of meaning.

However and *also* are seldom used by good writers to begin a sentence. They stand within:

Others, *also*, came to his assistance.

In that county, *however*, party feeling ran so high that, etc.
Which of the other conjunctions above may also stand within?

Sentence-forms Generally Emphatic. — *Balanced Sentences.*

— Though sentence emphasis is best secured in each case by revising the sentence to fit that particular place, this revision will show that two sentence-forms are emphatic generally. These two forms are recognized, therefore, by technical names: (1) the *balance*, or balanced sentence; (2) the *period*, or periodic sentence. The balance is very commonly an emphatic form for compound sentences. As its name

implies, it is a compound sentence whose parts are made alike in form.

(1) In the ordinary high school a boy gets all his education with his head; but in the manual-training high school his hands also come into play.

(2) In the ordinary high school a boy gets all his education with his head; but in the manual-training high school he gets part of it with his hands.

The second form is plainly the more emphatic. Indeed, the first shows its weakness as soon as it is spoken. In attempting to stress *hands* one has to slur the end of the sentence. But why stress *hands*? Evidently because it is contrasted with *head*. The contrast in thought is most easily brought out by a likeness in form, *i.e.*, by a balance.

(1) The United States has prospered during a long period of protection; but under free trade the same period in England has been one of prosperity.

(2) The United States has prospered during a long period of protection; but England has prospered during the same period with free trade.

Here the emphasis desired to bring out the parallel between *protection* and *free trade* is defeated in (1) by placing these main words in different positions, and gained in (2) by placing them in the same position. A compound sentence of comparison or contrast is usually made emphatic by balance.

The memory of other authors is kept alive by their works; but the memory of Johnson keeps many of his works alive.

—MACAULAY, *Life of Samuel Johnson*.

This is simply a wider application of the rule for correlatives. It applies to the whole sentence what we have all learned about parallel parts.

- (1) They succeeded neither by land nor sea.
- (2) They succeeded neither by land nor *by* sea.
- (1) A countenance more in sorrow than anger.
- (2) "A countenance more in sorrow than *in* anger."
- (1) Either he attempted too much or chose incapable officers.
- (2) He either attempted too much or chose incapable officers.
- (1) He both amazed his native town by his theories and his practices.
- (2) He amazed his native town both by his theories and by his practices.

In all these cases the second form is the one that we expect. Most of us are fond enough of balance to feel in the first form something lacking or something crooked. When a speaker or writer sets out to express a parallel we expect him to express it exactly. If he leaves it not quite ship-shape, we are annoyed. Therefore it is a rule, almost as binding as a rule of syntax, that correlative phrases and clauses shall be exactly alike in form. The same principle may be applied to a whole compound sentence; but this application is less binding. Here it is no longer a rule of correctness, but a useful means of emphasis. As applied to a whole sentence, it is often advantageous; as applied to minor parts, it is necessary.

Periodic Sentences. — The period, or periodic sentence, is very commonly an emphatic form for complex sentences. In general, a periodic sentence follows the principle of emphasis by putting the main clause last. It puts first all the subordinate clauses, all the conditions, exceptions, or other modifiers of its main idea, in order to end with the point. Thus a period is a sentence suspended up to its close. Instead of making an assertion and then modifying it, the periodic sentence makes no assertion at all until all the modifiers are in. It is a sentence left incomplete up to its period. It does not end until the last word. A period,

then, is a sentence so formed that up to its last word its syntax is incomplete.

(1. *unperiodic*) We shall be swamped if we attempt those rapids with our canoe so heavily laden.

(2. *periodic*) If we attempt those rapids with our canoe so heavily laden, we shall be swamped.

(1. *unperiodic*) We may as well signal the boat, since we have missed that train.

(2. *periodic*) Since we have missed that train, we may as well signal the boat.

(1. *unperiodic*) He advanced very near under cover of the dense forest, so that the enemy had no escape.

(2. *periodic*) He advanced so near under cover of the dense forest that the enemy had no escape.

Sometimes in an oratorical summary the period holds the syntax in suspense at considerable length.

If, then, the removal of this spirit of American liberty be for the greater part, or rather entirely, impracticable; if the ideas of criminal process be inapplicable, or, if applicable, are in the highest degree inexpedient; what way yet remains?

—BURKE, *On Conciliation with America*.

And yet he, who was generally the haughtiest and most irritable of mankind, who was but too prompt to resent anything which looked like a slight on the part of a purse-proud bookseller or of a noble and powerful patron, bore patiently from mendicants, who, but for his bounty, must have gone to the workhouse, insults more provoking than those for which he had knocked down Osborne and bidden defiance to Chesterfield.

—MACAULAY, *Samuel Johnson*.

But the main use of the periodic form is in such shorter sentences as the following, from the same essay of Macaulay:

Being frequently under the necessity of wearing shabby coats and dirty shirts, he became a confirmed sloven. Being often very

hungry when he sat down to his meals, he contracted a habit of eating with ravenous greediness.

The periodic form is naturally adapted to such sentences of result. Though in conversation we might say, *He was overtired, so that he took cold*; in writing we should revise to the more precise form, *He was so overtired that he took cold*. The two are alike brief; but what the former gives in two pieces the latter gives in one. The same is true for concessive clauses and, to a lesser degree, for other subordinate clauses, in short complex sentences. Emphasis is usually served by putting first the *if*- or *though*- or *since*-clause. But the main consideration is always, not to write a certain pattern of sentence, but to bring out the right word. Where the emphasis, as sometimes happens, should fall on the subordinate clause, the periodic form would be false.

Make the following sentences periodic. The idea is not, of course, to improve them, but merely to study the form:

It was after the hour of the *table d'hôte*, so that I was obliged to make a solitary supper from the relics of the ampler board. The weather was chilly; I was seated alone in one end of a great gloomy dining-room, and, my repast being over, I had the prospect before me of a long dull evening, without any visible means of enlivening it. I summoned mine host, and requested something to read; and he brought me the whole literary stock of his household, a Dutch family Bible, an almanac in the same language, and a number of old Paris newspapers.

—IRVING, *The Sketch Book*.

Make or quote two balanced sentences.

Analyze a connected passage of some length, assigned from the quotations in this book or from some author currently studied in the course of literature, to show which sentences are periodic, which have balance, and — what is of much more importance — how the emphasis of each is adjusted to connect it with the next sentence. Point out also the conjunctions, demonstratives, or repetitions used to enforce the connection of sentence with sentence. The following may serve as additional material:

If we know the velocity and weight of any projectile, we can calculate with ease the amount of heat developed by the destruc-

tion of its moving force. For example, knowing as we do the weight of the earth and the velocity with which it moves through space, a simple calculation enables us to state the exact amount of heat which would be developed, supposing the earth to strike against a target strong enough to stop its motion. We could tell, for example, the number of degrees which this amount of heat would impart to a globe of water equal to the earth in size. Mayer and Helmholtz have made this calculation, and found that the quantity of heat which would be generated by this colossal shock would be quite sufficient, not only to fuse the entire earth, but to reduce it, in great part, to vapor. Thus, by the simple stoppage of the earth in its orbit, "the elements" might be caused "to melt with fervent heat." The amount of heat thus developed would be equal to that derived from the combustion of fourteen globes of coal, each equal to the earth in magnitude. And if, after the stoppage of its motion, the earth should fall into the sun, as it assuredly would, the amount of heat generated by the blow would be equal to that developed by the combustion of 5600 worlds of solid carbon. — JOHN TYNDALL, *Heat Considered as a Mode of Motion*.

MR. PRESIDENT, AND GENTLEMEN OF THE CONVENTION: If we could first know where we are, and whither we are tending, we could better judge what to do, and how to do it. We are now far into the fifth year since a policy was initiated with the avowed object, and confident promise, of putting an end to slavery agitation. Under the operation of that policy, that agitation has not only not ceased, but has constantly augmented. In my opinion, it will not cease until a crisis shall have been reached and passed. "A house divided against itself cannot stand." I believe this government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved; I do not expect the house to fall; but I do expect it will cease to be divided. It will become all one thing, or all the other. Either the opponents of slavery will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinction; or its advocates will push it forward, till it shall become alike lawful in all the states, old as well as new, North as well as South. — LINCOLN, Opening of the *Springfield Speech*, 1858.

In the last sentence above, notice first that the periodic suspense is kept by using correlatives. *Either* keeps us waiting for *or*. But this sentence is not periodic as a whole. The syntax is completed at the word *forward*. Then another clause is added, *till . . . states*; then a phrase, *old as well as new*; and finally another phrase, *North as well as South*. Such adding of phrases and clauses often makes a sentence weak by making it trail through a succession of afterthoughts. But these are not afterthoughts; they are part of the first plan. Lincoln meant from the beginning to put them there. Why? Because each addition enforces the thought, carries it forward, expands it, and finally drives it home. As the sentence goes on, it increases in force. Such a plan of increasing force, without suspense, is sometimes called *climax*, from the Greek word meaning a ladder. Climax is not a distinct sentence-form; it is merely an application of the general principle of emphasis; but it exhibits the principle in an aspect worth formulating: *A strong sentence goes uphill; a weak sentence goes downhill*. In other passages show which unperiodic sentences have this quality of climax.

The modern modes of travelling cannot compare with the old mail-coach system in grandeur and power. They boast of more velocity, not, however, as a consciousness, but as a fact of our lifeless knowledge, resting upon *alien* evidence; as, for instance, because somebody *says* that we have gone fifty miles in the hour, though we are far from feeling it as a personal experience, or upon the evidence of a result, as that actually we find ourselves in York four hours after leaving London. Apart from such an assertion, or such a result, I myself am little aware of the pace. But, seated on the old mail-coach, we needed no evidence out of ourselves to indicate the velocity. On this system the word was, *Non magna loquimur*, as upon railways, but *vivimus*. Yes "*magna vivimus*"; we do not make verbal ostentation of our grandeurs, we realise

our grandeurs in act, and in the very experience of life. The vital experience of the glad animal sensibilities made doubts impossible on the question of our speed; we heard our speed, we saw it, we felt it as a thrilling; and this speed was not the product of blind, insensate agencies, that had no sympathy to give, but was incarnated in the fiery eyeballs of the noblest amongst brutes, in his dilated nostril, spasmodic muscles, and thunder-beating hoofs. The sensibility of the horse, uttering itself in the maniac light of his eye, might be the last vibration of such a movement; the glory of Salamanca might be the first. But the intervening links that connected them, that spread the earthquake of battle into the eyeball of the horse, were the heart of man and its electric thrillings, kindling in the rapture of the fiery strife, and then propagating its own tumults by contagious shouts and gestures to the heart of his servant the horse.

—DE QUINCEY, *The English Mail-Coach*.

A great author is not one who merely has a *copia verborum* whether in prose or verse, and can, as it were, turn on at his will any number of splendid phrases and swelling sentences; but he is one who has something to say and knows how to say it. I do not claim for him, as such, any great depth of thought, or breadth of view, or philosophy, or sagacity, or knowledge of human nature, or experience of human life, though these additional gifts he may have, and the more he has of them the greater he is; but I ascribe to him, as his characteristic gift, in a large sense the faculty of expression. He is master of the twofold Logos, the thought and the word, distinct, but inseparable from each other. He may, if so be, elaborate his compositions, or he may pour out his improvisations; but in either case he has but one aim, which he keeps steadily before him, and is conscientious and single-minded in fulfilling. That aim is to give forth what he has within him; and from his very earnestness it comes to pass that, whatever be the splendour of his diction or the harmony of his periods, he has with him the charm of an incommunicable simplicity. Whatever be his subject, high or low, he treats it suitably and for its own sake. If he is a poet, “nil molitur ineptè.” If he is an orator, then too

he speaks, not only "distinctè" and "splendidè," but also "aptè." His page is the lucid mirror of his mind and life —

"Quo fit, ut omnis
Votivâ pateat veluti descripta tabellâ
Vita senis."

He writes passionately, because he feels keenly; forcibly, because he conceives vividly. He sees too clearly to be vague; he is too serious to be otiose. He can analyse his subject, and therefore he is rich; he embraces it as a whole and in its parts, and therefore he is consistent; he has a firm hold of it, and therefore he is luminous. When his imagination wells up, it overflows in ornament; when his heart is touched, it thrills along his verse. He always has the right word for the right idea, and never a word too much. If he is brief, it is because few words suffice; when he is lavish of them, still each word has its mark, and aids, not embarrasses, the vigorous march of his elocution. He expresses what all feel, but all cannot say; and his sayings pass into proverbs among his people, and his phrases become household words and idioms of their daily speech, which is tessellated with the rich fragments of his language, as we see in foreign lands the marbles of Roman grandeur worked into the walls and pavements of modern palaces.

Such pre-eminently is Shakespeare among ourselves; such pre-eminently Virgil among the Latins; such in their degree are all those writers who in every nation go by the name of classics. To particular nations they are necessarily attached from the circumstance of the variety of tongues, and the peculiarities of each; but so far they have a catholic and ecumenical character that what they express is common to the whole race of man, and they alone are able to express it.

If, then, the power of speech is a gift as great as any that can be named, — if the origin of language is by many philosophers even considered to be nothing short of divine, — if by means of words the secrets of the heart are brought to light, pain of soul is relieved, hidden grief is carried off, sympathy conveyed, counsel imparted, experience recorded, and wisdom perpetuated, — if by

great authors the many are drawn up into unity, national character is fixed, a people speaks, the past and the future, the East and the West, are brought into communication with each other, — if such men are, in a word, the spokesmen and prophets of the human family, — it will not answer to make light of literature or to neglect its study. Rather we may be sure that, in proportion as we master it in whatever language, and imbibe its spirit, we shall ourselves become in our own measure the ministers of like benefits to others, be they many or few, be they in the obscurer or the more distinguished walks of life, who are united to us by social ties, and are within the sphere of our personal influence.

—NEWMAN, *The Idea of a University, Literature.*

4. ADAPTATION OF SENTENCE-FORM BY SOUND

Variety. — Sentence emphasis adapts the sentence to its logical place in the paragraph. A further adaptation of sentence-form, the adaptation to feeling, is discussed in Part II, Chapter ix. Meantime it is enough to indicate two points: (1) monotony is sameness of sentence-form; (2) careful subordination and the repetition of a key-word to mark the connection belong rather to exposition and argument than to description. First, as to monotony. This is an affair of sound, movement, or cadence. For instance, a long succession of balanced sentences about equal in length makes a measured rise and fall of sound. Even to read it from the printed page is tiresome, and to hear it is to be lulled toward drowsiness. For sentences are made — of ideas, certainly, but also of sounds. They affect our minds; but they also affect our ears. From its very form the balanced sentence more readily becomes monotonous than any other. But any sentence-form may be used so often as to become a monotonous habit, a tiresome mannerism. The remedy is to revise the form of some sentences, if for no other reason than to change the cadence. Writers who revise their

sentences for emphasis and connection, according to the principles in the preceding sections, are likely to secure variety incidentally. But both logic and variety will be made surer if the paragraph be read aloud. The familiar criticism, though vague and simple, is practically useful in telling us where to revise, — "That does not sound right." There is no better test of monotony.

No revision does more for variety than the changing of improper compound sentences to complex (page 185). Another common means is the substitution of a phrase for a clause; and this again has been already suggested as a correction for redundancy.

Give an instance of each kind of adverbial clause possible to a complex sentence: of condition, manner, time, purpose, result, cause, concession. Besides the subordinating conjunctions used in each case, give other conjunctions or conjunctive phrases that express the same relation. For instance, condition, expressed by *if*, may also be expressed by *provided*, *so long as*, *unless*, *whether . . . or*, *supposing that*, by the absolute construction, and by inverting the usual order of subject and predicate.

In the following, substitute phrases for the subordinate clauses:

While we waited for the train, we read all the newspapers that we found in the room.

If I had one cool-headed companion, I could find out how many Indians there are among those rocks that command the pass.

Though I have been devoted to my party these twenty years, I cannot stand with it when it takes up its present position.

When you are drifting in a canoe at night, it is hard to tell where the air stops and the water begins, unless you touch the water with your hand.

Descriptive Sentences. — Descriptive sentences, since they appeal rather to feeling than to reason, cannot be revised by mere logic. In description we are not trying to arrange ideas; we are trying to suggest images. Instead of a sequence of thought, we have a series of sensations. Naturally, therefore, descriptive sentences are far oftener short,

simple, and disconnected than would be feasible in exposition. Description naturally has fewer connectives and pays less attention to sentence emphasis.

A light shone through the crack. They were there! Suddenly I struck the door. A faint scuffling, a silence, a faint scream in the distance, two shots, and I knew that Joe's party had trapped them at the back.

The logical relations of this would be expressed more accurately by subordination:

When I saw by the light shining through the crack that they were there, I struck the door suddenly. That they fled by the back way and were trapped by Joe's party was indicated by . . . etc.

But such revision, instead of strengthening the description, actually weakens it. The object of description is not to define logical relations, but to follow sensations. If the action described was rapid, the sentences should be short. If it was also hurried and confused, there should be no connectives. If it was measured, the sentences may be balanced. If it was slow and lingering, the sentences may lag more than would be tolerable in exposition or argument. In short, the revision of descriptive sentences is occupied mainly with making their movement sound more like what is described. Revision of descriptive sentences is revision for sound.

Compare the difference in movement between the two following. Each is appropriate to its subject.

The Swiss holds a paper through his porthole. The shifty usher snatches it and returns. Terms of surrender, Pardon and immunity to all! Are they accepted? "*Foi d'officier*" (on the word of an officer), answer shall half-pay Hulin, or half-pay Elie — for men do not agree on it — "they are!" Sinks the drawbridge,

Usher Maillard bolting it when down. Rushes in the living deluge.
The Bastille is fallen! *Victoire! la Bastille est prise!*

—CARLYLE, *The French Revolution*, V. vi.

Almost everybody knows, in our part of the world at least, how pleasant and soft the fall of the land is round about Plover's Barrows farm. All above it is strong, dark mountain, spread with heath and desolate; but near our house the valleys cove and open warmth and shelter. Here are trees and bright green grass, and orchards full of contentment; and a man may scarce espy the brook, although he hears it everywhere. And indeed a stout good piece of it comes through our farmyard, and swells sometimes to a rush of waves when the clouds are on the hilltops. But all below, where the valley bends, and the Lynn stream goes along with it, pretty meadows slope their breast, and the sun spreads on the water.

—BLACKMORE, *Lorna Doone*.

The sentence movement of the description below does not at all follow the sensations described:

As I walked down Broadway, I noticed a large crowd around the Singer Building, all gazing up eagerly into the air. I followed their eyes and saw that the object of their attention was a man on the top of the Singer flag^{*}-pole, gilding the ball.

It was revised as follows:

I had to look up too. The whole crowd was looking up. Higher, higher, so high that our necks ached to look at him, a man clung to the Singer flag-pole. Floating in emptiness there, he was gilding the ball.

Similarly revise the following so as to make it accord with what is described.

Fire! Fire! People go by in streams, while the shriek of a trolley-car grinding around a curve contrasts sharply with the pounding of the hoofs on the pavement as the horses pull the heavy engine with its ceaseless clang, leaving a line of burning coals to mark its trail. Showers of sparks gleam in the heavy smoke for an instant as she goes by, followed by the hose tender, the horses' hoofs echoing more and more faintly.

Such revision tends also to weed out descriptive redundancies.

I heard the sound of Salvation Army music coming from a little group on the corner.

This means simply:

I heard a little Salvation Army band on the corner; or
The little Salvation Army band played on the corner.

In the unrevised form *heard, sound, music, coming*, — all are used to express the same single sensation. For one sensation try to use one word. Though this is not possible always, it is possible oftener than can be imagined without some practice in revising for descriptive directness. It is rarely necessary to insert *I saw, I heard, came to my ears*, etc. What you are describing you must have seen or heard. You may take that for granted. But besides omitting mere superfluities, cultivate the habit of predicating directly in single verbs.

The brilliant sunshine of the autumn, where it struck the sparse leaves, made the foliage give forth a glint, and depicted the shadows sharply.

The two sensations here, light and shadow, can be suggested, not only as well, but much better, by two simple verbs. For in the present form the impression is clogged by superfluous words.

The brilliant autumn sunshine glinted on the sparse leaves and drew sharp shadows.

The Isotta car was now approaching this turn with leaps and bounds.

Toward this turn the Isotta car now leapt and bounded.

Correct the following in the same way:

A faint gleam of the headlight could now be seen struggling through the inky blackness. Soon I could hear the low roaring, which changed to a higher key as the train came rolling across the trestle.

Far down the street the clatter of hoofs reached my ears. A second later the sharp clang of the gong rang out in quick and regular strokes.

Here and there in the moonlight were the shadowy shapes of pumpkins, on a few of which the pale rays played and made them take a lurid yellow tint. Beyond the corn a clump of trees gave forth a mournful sound from their bare, rattling branches.

A loud booming came up from the breakers pounding on the rocks below.

SUMMARY OF THE CHAPTER

Introduction. Paragraphs are settled by plan in advance; sentences, by revision.

1. The first problem of revision, to make a sentence clear for itself, demands the turning of improper compound sentences into complex sentences.

2. The second problem of revision, to make a sentence strong in support of its neighbors, is solved by emphasizing the right word at the end.

3. The right word for the end is (a) the word that is most important in the thought of that sentence, (b) the word that is most important in carrying forward the thought of the paragraph.

4. The linking of sentence to sentence, thus prepared by careful emphasis, is fixed by repetition of the emphasized word, by conjunctions, or by demonstratives.

5. The principle of emphasis is conspicuous in (a) balanced sentences, (b) periodic sentences, (c) sentences that have climax.

6. Finally, the adjustment of sentence-form may consider the sound.

APPENDIX TO PART I

COMMON FORMS OF ADDRESS AND SUBSCRIPTION

(NOTE — The following list is intended for reference, not for memorizing.)

CLERGYMEN

(a) *On the envelope,*

Rev. Horace Brown,

(b) *At the head of the letter,*

Rev. (or The Rev.) Horace Brown,

Dear Sir (or Rev. and dear Sir):

For clergymen who have the degree of *Doctor of Divinity* (D.D.) the address is as follows:

(a) *On the envelope,*

Rev. Horace Brown, D.D.,

(b) *At the head of the letter,*

Rev. Horace Brown, D.D.,

My dear Sir (or Rev. and dear Sir):

or, more familiarly,

Dear Dr. Brown,

NOTE 1 — In the latter case the fuller address may be written at the end, to the left, below the signature, thus:

Yours faithfully,

EDWARD P. BOWEN.

The Rev. Horace Brown, D.D.

Bishops of the Roman and Anglican Churches are addressed as *Right Reverend* (*Rt. Rev.*).

(a) *On the envelope,*

The Rt. Rev. Edward P. Sloan,

(b) *At the head of the letter,*

The Rt. Rev. the Bishop of _____,

(or The Rt. Rev. Edward P. Sloan,

Bishop of _____,)

Rt. Rev. and dear Sir:

DOCTORS OF MEDICINE

- (a) *On the envelope*,
Dr. A. B. Clough (or A. B. Clough, M.D.),
- (b) *At the head of the letter*,
Dr. A. B. Clough (or A. B. Clough, M.D.),
Dear Sir (or My dear Sir):

NOTE 2 — *Doctor of Philosophy (Ph.D.)*, not being a professional title, is seldom used in spoken address outside of college circles; and the same is generally true of the honorary title *Doctor of Laws, (LL.D.)*. Holders of these degrees, being often members of a college faculty, are usually addressed in writing by their official title, which is commonly Professor. The proper formal address would be as follows:

- (a) *On the envelope*,
Dr. Arthur B. Clough, or Arthur B. Clough, Ph.D.,
Prof. Walton B. Sanders,
- (b) *At the head of the letter*,
Arthur E. Clough, Ph.D.,
Instructor in Biology, University of Missouri,
My dear Sir:
- Walton B. Sanders, Ph.D.,
Professor of Greek, Amherst College,
Dear Sir:

More familiar letters may begin as follows:

Dear Doctor (or Dr.) Clough,
Dear Professor (not Prof.) Sanders,

In this case the fuller address is written at the end, as in Note 1, above.

GOVERNORS

The proper title of the governor of a State or territory, and of the President of the United States, is *Excellency*. In some states

this is customary; more commonly the Governor is addressed a *Honorable*.

(a) *On the envelope,*

His Excellency Charles H. Carter,
Governor of _____, or
(Hon. or The Hon.) Charles H. Carter,
Governor of _____,

(b) *At the head of the letter,*

His Excellency the Governor of _____, or
(His Excellency Charles H. Carter,
Governor of _____,) or
(The Hon. Charles H. Carter,
Governor of _____,)
Sir:

OFFICERS OF THE ARMY AND NAVY

The general salutation is *Sir*. The rank and station should be indicated in full at the head of the letter by reference to an official list. Generals of all grades (Major-General, etc.) may be addressed *on the envelope* simply as General, and so with the other ranks which have more than one grade; but at the head of the letter the address may be exact.

(a) *On the envelope,*

Major George A. Green,
Fifth Infantry,
General Hugh A. Black,
Commanding _____

(b) *At the head of the letter,*

Lieutenant-Colonel Horace Stanton,
Commanding Fort Stanhope, Colorado,
Sir:
Rear-Admiral Anthony R. Ivison,
Commanding the Pacific Squadron,
Sir:

OFFICERS OF CIVIL GOVERNMENT

The general title is Honorable (Hon.). This applies to the Vice-President, to judges of all courts, to cabinet officers, to members of Congress or of a State legislature, and to mayors of cities. The general salutation is *Sir*.

(a) *On the envelope,*

Hon. (or The Hon.) Samuel P. Caldwell,

(b) *At the head of the letter,*

Hon. (or The Hon.) Samuel P. Caldwell,
Senator from Nebraska,
Sir:

Hon. (or The Hon.) Livingston B. Snell,
Representing the Sixth District of Ohio,
Sir:

Hon. (or The Hon.) Franklin Fairfax,
Secretary of the Treasury,
Sir:

PRESIDENTS (See also *Governors*)

Presidents of colleges or universities, being usually professors, are addressed as follows:

(a) *On the envelope,*

Prof. Titus Osborn (LL.D., or other degree),
President of ————— University,

(b) *At the head of the letter,*

Professor Titus Osborn, LL.D.,
President of ————— University,
Sir (or Dear Sir):
The President of ————— University,
Sir (or Dear Sir):

Presidents of societies, associations, etc., are addressed simply as the heads of business houses:

- (a) *On the envelope,*
Mr. Arthur R. Sands,
-

- (b) *At the head of the letter,*
Mr. Arthur R. Sands,
President of _____
Dear Sir:

PROFESSORS (See Note 2 above, under *Doctors*)

ALL OTHER PERSONS are generally addressed as *Mr.* or *Mrs.* In England *Esq.* is used to indicate a slight social superiority; in this country it is practically equivalent to *Mr.*, being merely less usual. The salutation is *Dear Sir* (or *My dear Sir*), *Dear Madam* (or *My dear Madam*). Unmarried women of any age are addressed on the envelope as *Miss*, but always at the head of the letter as *Madam*. The plural of *Mr.*, as in addressing a firm, is *Messrs.*; and the corresponding salutation is *Dear Sirs* or, more commonly, *Gentlemen*.

In more familiar letters the address at the head is adapted to the degree of familiarity, somewhat as follows:

- (1) Mr. Thomas L. Brown,
My dear Sir:

- (2) Dear Mr. Brown,
(the more formal address being put at the end, as in Note 1, under Clergymen.)

- (3) Dear Brown,
(the more formal address omitted.)

- (4) Dear Tom,

COMMON FORMS OF SUBSCRIPTION

The subscription at the close of a letter admits some variety of adaptation. It may suggest rather delicately the attitude of the writer to the reader. Seventy years ago the subscription to

letters having any degree of formality was usually rather elaborate; and this is still the custom outside of England and America.

I beg to subscribe myself,

Your obedient servant,

CHARLES ROWLEY.

Meantime I remain, with highest esteem,

Yours to command,

CHARLES ROWLEY.

I have the honor to be, Sir,

Your humble servant,

CHARLES ROWLEY.

Meantime believe that I am

Yours very truly,

CHARLES ROWLEY.

Such formal subscriptions, being almost obsolete among English-speaking people, should be used to-day only when they are especially apt to the reader and the occasion. Otherwise they will seem stilted. In every case the syntax and punctuation must be kept as in any other sentence, the only exception being that the final salutation always stands as a separate line beginning with a capital:

Your obedient servant,

Very truly yours,

Yours with all respect and esteem.

In the unusual case of a letter in the third person (See page 17), beware of changing to the second person at the end. Keep the same person throughout. It is a solecism to write:

Miss Brown requests the pleasure of Miss Nancy Lammeter's company at . . . etc.

Yours cordially,

ELLEN BROWN.

A letter in the third person properly has no subscription at all.

Letters of petition properly have a subscription, but keep it in the third person:

Awaiting the action of your honorable board, your petitioners remain

Yours respectfully,

JOHN R. FULLER,
EDWARD J. BOWEN,
RALPH THORNDIKE.

But if the petition has been written in the first person (*I* or *we*), the subscription is as in an ordinary letter.

The form *I am*, etc., is more common for a first letter; *I remain*, etc., for a letter following previous correspondence.

In general, apart from special adaptations to person and occasion, the subscription may be as follows:

1. *In letters to dignitaries, superiors, persons of rank or official position,*
 - (a) Yours very respectfully,
(or Respectfully yours,)
 - (b) Yours respectfully,
2. *In business letters and most ordinary formal correspondence,*
 - (a) Yours truly,
 - (b) Yours very truly,
3. *In personal letters without familiarity,*
 - (a) Yours sincerely,
 - (b) Yours very sincerely,
4. *In personal letters, according to familiarity,*
 - (a) Yours faithfully,
 - (b) Yours cordially,
 - (c) Yours affectionately,
 - (d) Yours always, etc.
5. *In personal letters, with reference to the occasion,*
 - (a) Yours gratefully,
 - (b) Yours regretfully, etc.

PART II

CHAPTER VI

CLEARNESS IN BRINGING BOOKS TO BEAR : ANALYSIS OF READING FOR ARGUMENT AND EXPOSITION

The themes in connection with this chapter, besides the incidental exercises in note-taking and brief-drawing suggested below, should be arguments and expositions of 500 words or more. They should be spread over as much time as is necessary to provide (a) careful choice and limitation by announcement or assignment in advance, (b) class discussion of notes and brief in advance, (c) connected oral presentation, of the whole or of parts, the class being held to discuss the speaker's method, (d) writing out in full and revision after criticism. The main point of instruction being system and order, quantity and frequency are of less importance than thoroughness. The class work should be focused on preparing, criticising, and revising the themes themselves. All other exercises and all formal recitation should be subsidiary. At this stage a student needs less to tell how the thing should be done than to do it, to tell how he, or his neighbor, has done it, and to do it over again. Thus a large part of the recitation period may well be spent in hearing themes and giving account of them (See Part I. pages 75, 90), in definite tasks of written revision, or in debate. In large classes debaters may be chosen by competition. Subjects, in addition to those below, should be drawn, not only from current events and the school debating society, but also from current studies, especially history. A single subject will often serve as a field of work through several sections of the text-book and several meetings of the class.

For some students Chapters vi and vii, with the corresponding themes, had better be postponed, either entirely or in part, to the end of the course. Though they stand here in their logical place, their practical place should be determined by the proficiency of the par-

ticular class. With this view they have been made substantially complete within themselves.

1. GROWING UP TO THE LIBRARY

Choosing Books for Oneself. — No one can grow up out of intellectual childhood without learning to compare, to choose, and to group. How old a boy is in his mind can be estimated pretty closely by his use of a library; that is, by his ability in comparing books, in choosing from each the facts that he needs, and in grouping them for use. To some extent each student must thus become a teacher in order to advance his own education. From memorizing, and other ways of taking knowledge in at one source, he turns more and more to comparing what comes to him from different sources, to choosing what seems especially appropriate to himself, and to grouping his facts so as to show their bearing. His school is gradually widened as he begins to educate himself wherever he goes; and more and more his center of education is transferred from the room where he sits at a desk before a teacher to the great room where he must choose among teachers, teach himself as well as be taught, and teach others in order to be sure of having learned, — in a word, from the school to the library. Unusual ability in such comparing, choosing, and grouping marks a man as original. He becomes a leader by his power to think for himself. But some of this ability must be acquired by every one whose education is to be more than rudimentary.

Choosing by Bent. — We see such growing most plainly in a boy or girl of strong bent. Such a one, receiving still many things that ought to be known by everybody, reaches out more quickly after other things which he feels to be especially appropriate to himself. About these whatever he learns begins to cluster. He passes from the stage of mere

receiving to the stage of choosing and grouping by connecting what he learns with some aspect of his favorite study.

A girl in the first year of high school, for instance, shows unexpected bent in her drawing. Doing free-hand sketches tolerably, she is more interested in design. Her brother is astonished to find that she has picked up mechanical drawing from his text-book and sketches. She looks in the magazines for competitive plans of houses, draws house-plans herself for pleasure, begs a peep at the blue paper of a builder, on a picnic becomes absorbed in watching stone-cutters shape the blocks according to specifications, pores in the library over photographs and ground-plans of the great cathedrals. Some day she will be a drafts-woman in a firm of architects; but, long before she has achieved this professional skill, she will have been in her general education comparing, choosing, and grouping with reference to her favorite study. Mathematics will become tolerable as she finds that it underlies all architecture. History will be grouped in her mind about buildings expressive of their times, a medieval French cathedral, Faneuil Hall in Boston, or the size and outline of a Greek temple. Her education will be turned and largely guided by that controlling idea which we call a bent.

Choosing for general education. — Such education by bent is an extreme case of a process which intellectual growth demands in some degree of us all. The process is not the narrowing of study to the single channel of one's profession or business. Indeed, it is just when his studies become more various that the student begins to choose and group for himself. He not only prizes certain subjects most; he begins to look at all subjects for himself. Heretofore his individuality has been shown by the books he drew from the library; now it is shown by a growing ability to compare books in the library, find among them what will serve him, and express the results in his own way. For, as his whole education comes to be turned by an individual way of

looking at things, so in particular he is led to investigate for himself. Besides learning by heart the interpretations of American history, for instance, provided by a single teacher or a single book, the student begins to reach beyond these for interpretations of his own. From using a book he advances to using books. Comparing in the library several accounts of the same thing, he thinks out for himself what aspects are most important for his own guidance. Every young American should discover that the town library, for all things of the mind, is the real community center from which every citizen must learn how to get what he needs for his own education. Knowledge is power, says the proverb; but knowledge becomes power in proportion as it is applied by each student to his own upbuilding.

Choosing for Composition. — Such use of a large library is learned most quickly through being obliged to shape one's notes into some definite written result. Silly as a student would be to think these results important to the world, yet he is wise to compose them by way of thinking them out for himself. One's youthful opinion may be worth nothing; but the habit of finding out for oneself and of fitting knowledge to oneself is worth everything. That is why students are asked to make speeches and essays on Franklin as a Typical American, on the Increase of Our Navy, on the Inter-urban Railroad System of Indiana, on the Battle of Saratoga, the Indians of Cooper, and a hundred other subjects in which they may be interested. The composition gives no new information to the world; but it gives new discipline to the composer. Every wise teacher tries to make the pupil a teacher too. *Qui docet discit*, said the Latin proverb; he who teaches learns. The endeavor to make one's conception clear to others compels that choosing and grouping which make it clearer to oneself. In order to go on learning, one must begin to teach.

Write an essay entitled *My Life Work*, as follows: *1st paragraph*, I intend to be —— (Give any necessary explanation of what this career is, and tell its advantages in general); *2d paragraph*, My reasons for choosing it are —— (Explain your bent and how it is indicated); *3d paragraph*, The studies preparing for this in general are ——, in particular are —— . See that each paragraph ends with an emphatic statement of its point, and that the last paragraph ends with the point of the whole theme.

Appropriating Books. — But this training cannot be gained by merely going to the library. It depends not so much on reading as on thinking. It aims at something more than acquiring many facts or taking many notes. It begins with the idea of reading several books on the same subject, to compare, to choose what bears on the present purpose, and to group accordingly. Composition, that is, calls upon us to think out our reading, that we may tell others how we interpret. Mere digest, or summary of a single book, does not give this training at all. The very object is to compare and to apply for ourselves. This we can best learn to do by beginning with a subject that we like enough to investigate it, and enough to make others interested in what we think about it.

Prepare an oral address to the class on either *Knowledge is power* or *He who teaches learns*. Develop the idea by giving instances, by explaining why it is true, and by showing how it may be practically applied. The address should not exceed five minutes, and may be written out afterwards as an essay.

The difference in training between summarizing a single book and using several books in preparation for composition is clear from many familiar instances like the following. Two boys of the same class go to the public library to prepare an essay on Lincoln. One, carrying home the first biography he finds, takes down at once the date of Lincoln's birth and the names of his parents, and goes on to note dates, places, and persons as he reads.

At the end of an hour he has read two chapters and taken six sheets of notes. The other boy stays in the library. Seeking first a brief biographical sketch, and finding it in a cyclopedia, he reads it through without a single note. Then, thinking for a while, he jots down a few words: *poor — hard times; plucky; honest; ambitious, but no tricks; humor, kindness, common sense*. Looking these over, he writes on another sheet:

Pluck — ambition in spite of poverty.

Honesty in business — no tricks in politics — confidence of the people — frank, open.

Common sense — what is called Yankee — never put on airs.

Humor — many jokes and stories.

Kindness — lovable.

Then, going to the shelves and looking over the titles of all the books there on Lincoln, perhaps a dozen, he makes a note of three that most attract him. Thus by the end of an hour he has made some definite progress in grasp of Lincoln and of himself, while the first boy has put six sheets of waste paper in the way of gaining either.

For the next hour at the library, the wiser boy writes each of his main ideas, *pluck, honesty*, etc., as the heading of a separate blank sheet. Then, taking down one of the books previously chosen, he reads it rather rapidly, noting on the proper slip a word or two, *e.g.*:

Honesty — story of sugar, Hapgood, 105; and, on another slip,

Kindness — letter about widow, Hapgood, 173.

On finishing this book, he decides that for him the most interesting aspect of Lincoln is *Why Lincoln Was so Beloved as President*. Therefore he reads in the two other books previously chosen only what bears on this limited subject.¹ At the end of five hours he has read one cyclopedia sketch, one brief biography, and parts of two others, has five sheets of classified notes, and has settled on the following plan of paragraphs:²

¹ Part I page 62.

² Part I page 163.

Why Lincoln Was so Beloved as President

1. *He had come up, in the American way, out of poverty.*
2. *In humor and common sense he was like the common people.*
3. *He had a deep kindness.*
4. *Above all, everybody knew that he was honest as daylight.*

At the end of the same time the first boy has read one book, taken fifteen sheets of notes, taken in many separate facts, and not seen even a glimmer of a plan. He finally produces a long manuscript, differing from its single source only in squeezing out most of the interest. The second boy's essay is original, not because it gives new information, but because its choosing and grouping show his own idea of what is most significant for him to put before his class. He is just so much better educated because he has so much the more grasp of choosing and grouping and bringing himself to bear upon the facts and the people before him.

Composition of this sort may be applied in either of two ways. First, it may interpret the bearing and significance of facts merely to explain them; or, secondly, it may interpret in order to convince people or convert them. The former is technically called *exposition*; the latter, *argument*, or, more broadly, *persuasion*. For either the library preparation is much the same. Whether we wish to explain the causes of our war with Mexico or to justify our waging it, we need to investigate the same facts.

2. COLLECTING FACTS

Taking Notes. — *Notes on Cards.* — Why is the library catalogue on cards in drawers? Library catalogues used to be printed and bound in books; but consequently they were never complete. They had to have supplements continually; the combining of these supplements with the former catalogue meant reprinting from beginning to end; and meantime readers often had to consult several volumes in order to locate one book. In the card catalogue a new book means

simply the insertion of a new card; the catalogue is always complete; and the time needed for consultation is usually much less. Let this be a hint for your notes. Notes taken in a bound book cannot be easily arranged without being copied; and copying is a waste of time. Notes taken on cards need only be shuffled to be arranged in any order desired. The cards need not be of a particular style. Whether slips of paper, library cards, or leaves in a loose-leaf note-book, they will answer equally, if only they are (1) separate, (2) small, and (3) uniform in size. The whole point is to take each note on a separate slip, so that it may be arranged in whatever connection you finally plan. The slips can be held together by an elastic band. They should be destroyed after the composition is written or spoken; for, however important they may seem at the time, their value is mainly for practice. It is rarely wise for any one to make a permanent collection of notes except in the mature studies of his profession.

Notes Few and Brief. — Next to having notes instantly available on separate slips, the most important thing is to have them few and brief. People who heap up notes often write before they think, sometimes write instead of thinking. Notes in themselves never made any one wise or ready. Of course the number of notes must depend somewhat on the subject. A debate on the war with Mexico might require five times as many cards as an essay on the character of Lincoln, because the subject is more complicated. But in general the aim should be to keep notes down. To this end never quote if you can help it. Quotations add much to the bulk of notes. They are very likely to be abandoned after further reading. If they are kept, they hinder expression in one's own way. And finally, they are of little use. Once in a while a debater scores a point by quoting some authority. Otherwise a quotation is likely

to be worth no more than the fact it contains; and that can usually be noted better and more briefly in one's own words. No serious student ought to think there is any value in making of himself a copying machine. Don't quote.

Don't paraphrase either. Your object is not to repeat what some one else said, following his order, but to apply his facts to your own quite different end. There is no use in re-writing his cyclopedia article. Parts of it bear on your inquiry; parts do not. Taking a fact that you want, express it on your note-slip in the fewest words that will clearly remind you of that fact. Add always a brief reference to the book and the page. Then if by chance the note is too brief — and this happens rarely — the reference will guide instantly to the place; if the note is disputed, the reference will show your authority. Such note-taking is excellent practice in condensation, in forming a habit of expressing the gist of a thing. When you come to plan, it does not obscure the bearing of a note by superfluous words, or hamper your own application by suggesting some one else's. And when you come to write or speak, it leaves you quite free from any language but your own. Take a note in your own words, as briefly as is consistent with clearness, and add a reference to author and page.¹

Notes from more than One Source. — Keeping notes few and brief makes it possible in a given time to consult several books instead of one. This is so important, for real profit in composition based on reading, that it is practically indispensable. A composition based on a single source is hardly a composition at all. At best it is only a summary; at worst it is only a paraphrase. It gives no practice in planning; for it takes the plan ready-made. It requires neither comparing nor grouping and only such choosing as consists in leaving certain details out. Now the very point

¹ For subjects see below, and compare the head-note to this chapter.

of using a large library for investigation of facts is to compare, to choose, and to group. That is the kind of education proper to a large public library as distinct from the kind proper to a small private library. One is for extensive reading; the other, for intensive (see page 313). You pore over a book at home from cover to cover. That is one kind of reading, and there is none better. But you go to the library to gather and focus, for instance, what seem to you the most important differences between the French colonies and the English colonies in America, or to compare views as to the Japanese on the Pacific coast. That is quite another kind of reading. Having a different object, it should have a different method. In this case it is better for the written or spoken production, and far better for the student's education, to read chosen parts of several books than to spend the same time on one. Thus he will be taught by several teachers, and will himself both learn and teach with better mastery. Always, then, use more than one source of information. Do your own job; don't do another man's job over after him.

Books of Reference. — To this end, question at the beginning and all through the investigation. Before reading a book, know what you are looking for in that book; then read that point, not everything. In some cases we do not know at first exactly what we need. The subject, perhaps, has been assigned as a general topic for each one to limit as he chooses; or for some other reason there is need of guidance. Now every large library keeps certain books for this very purpose, guide-books to knowledge. They are called *reference books*, and they are usually arranged together in some alcove convenient for constant use. This, in fact, is one of the principal uses of a public library. The school library may have the books of reference most frequently used; but no small library can afford to collect the abundance that we

expect in a public library. The first lesson of research, then, is to learn where to look, to learn what are the principal reference books and what each is for.¹

EXERCISES IN THE USE OF REFERENCE BOOKS

What does an unabridged dictionary contain besides pronunciations and definitions? What is a dictionary of quotations? Of biography? Of dates? A dictionary of antiquities, or "classical dictionary"? Mention some other special dictionary on the reference shelves.

What general atlases are in the public library? Compare them by summing up briefly into how many and what parts each is divided. How do you find a place when you do not know even what continent it is in? Which special atlas has the best map of your state? Of the Philippines? In what respects is this map superior? What do you find in an atlas besides locations? What is a gazetteer? A historical atlas?

Does a cyclopedia differ from a dictionary merely in being larger? What cyclopedias are in the public library? Which is the smallest? The largest? The newest? Which seems to be most used? Investigate *turbine* and *automobile* in all the cyclopedias just enough to compare the articles as to length, division of the subject, and references at the end to books. Investigate in the same way another subject of your own choosing. Now compare the articles on *pyramids* or *Moors*. Which cyclopedia do you like best? Why?

What kind of material do you find in an annual statistical almanac; e.g., *The World Almanac* for the current year? Give an instance in which this would answer as well as a cyclopedia or better. Mention a class of things in the cyclopedia not found in

¹ Full instruction in the use of a large library demands far more space, of course, than can be given here. The assignments are meant to suggest others. Further direction and a bibliography will be found in Publications of the National Educational Association, *Report of the Committee on Instruction in Library Administration in Normal Schools*, May, 1906.

the almanac, and *vice versa*. Mention another book on the reference shelves important for ascertaining facts.

Books of reference evidently serve two purposes: first, they answer our questions briefly, by summing up the most important points of knowledge on a given topic; secondly, they tell us who will answer more fully, by adding a list of the best books on that topic. First, they tell us about some subjects all that we wish to know; secondly, they tell us about others, in which we are more interested, where to look further. Some books of reference are confined to the one purpose or the other. A smaller cyclopedia or a dictionary of a special subject, for instance, may give only summaries; a bibliography, or annotated list of books on a certain subject, gives nothing besides the list. But the larger cyclopedias usually give both summaries and lists of books. A little patient experiment will soon enable any one to begin his research, to get his bearings, without waste of time.

Reading from Book to Book. — To look further, we go to the card catalogue. Here may arise a difficulty. The books mentioned in the book of reference may be too technical for the purpose, or too elaborate, or in an unknown language, or not in the library. What then? There is no loss; for, even so, the horizon is widened by choosing, and enough has been picked up from the cyclopedia article to guide in consulting the *subject catalogue* and in limiting the scope of research. In many libraries the next step is made still easier and more profitable by the privilege of access to the shelves. Standing before a whole group of books on the general subject, one begins to choose.

How choose between two books without reading both through? In brief, by glancing through before reading, by questioning once more. Sometimes this takes but a moment, as when a book is evidently too elaborate, or too

brief, or too old. Sometimes the choice is determined by the author's name, as when the cyclopedia calls him an authority, or when we know by previous experience that he is clear and simple. When there is no such guide, it is worth while to question the table of contents; and this practice is the more useful the more one has already learned, for thus he often finds that, though the book as a whole has little to his present purpose, some chapter is very much in point. By practice one learns to know what he wants and to find what he wants more and more readily, until he has acquired that important skill which we call command of books.

FURTHER EXERCISES IN RESEARCH

(These exercises may be extended, abbreviated, or otherwise adapted to the class or the individual. They are meant, not to prescribe subjects, but to show kinds of subjects and method.)

1. Report orally from your note-slips on your preliminary investigation for the theme now in hand, somewhat as follows: I consulted 1st, ———; 2dly, ———; 3dly, ———. The main differences among these books are — ——. My particular theme within the common topic will be — ——. On this I propose to read further ———. The profit of such reports is much enhanced by watching how others have approached the same task.

2. Look for *chivalry* in all the dictionaries and all the cyclopedias, so as to explain the kind of information on this topic to be found in each. Find a popular history of the Middle Ages containing a chapter on *chivalry* and make a note of the title of the book and the chapter number. Look for, and note similarly, a chapter or section on *chivalry* in a history of France. If you do not find it in a brief, popular history, look in a longer history; if you find it in both, note the differences in length and manner of treatment. Investigate two other references in the card catalogue of subjects under the head *chivalry*, and note one of two references in this catalogue to related topics, or to sub-topics such as you might use in planning your essay. Find in the library, or mention from your previous reading, two stories

of chivalry. Write the title of each of these books on a separate card or slip and, underneath, a brief summary of the kind of information given by each. Such a catalogue on a single subject, though incomplete and imperfect, is of the same sort as the full and elaborate printed lists of books on certain subjects which are called bibliographies. These full, printed bibliographies are invaluable for long and extended research; but for limited investigation with a view to composition it is better to make one's own list of books actually used.

3. Report orally from note-slips how much information about *Denmark*, and of what kind, can be found: (1) in an atlas, (2) in a statistical almanac, (3) in a commercial geography, (4) in a small cyclopedia, (5) in a large cyclopedia, (6) (7) (8) in three other sources of your own choosing.

4. Starting with the vague, general notion expressed by the word *Indians*, find in the library what are the main lines for its investigation. Choosing the line that you like best, read along this far enough to limit your theme for an essay of not more than 500 words. After collecting notes, and before writing, draw up a report of how you began the investigation and how you went on, telling in order what books you consulted, and why.

Authority. — The fullest, latest, and most expert discussions in certain fields of common interest are often furnished by the bureaus of the federal government, such as the Department of Agriculture, the Forest Service, the Department of Commerce and Labor. Their publications are usually to be found in every public library; and, though they are often too minute and technical for ordinary use, they ought to be known as authorities. An *authority* is a source of information so trustworthy that its accuracy cannot be disputed. To judge between conflicting authorities is sometimes difficult even for minds mature and well trained; but to learn where to look for authority in matters of ordinary concern and argument is possible to any intelligent youth who will take pains, and becomes of great value as a mental habit.

Standard reference books are generally accepted as authority, and especially reference books limited to a particular field. Their authority is not, of course, their own; it is merely that of the books from which they draw; but, since the compilers are skilled in gathering and sifting information, since the summaries are frequently corrected by revision, and since most of us in many cases cannot go back to the original sources, the best books of reference may be trusted. Again, a book is often more readily accepted and usually more serviceable for composition than a magazine or newspaper, because it is probably more responsible and better digested. Expert as newspapers are in collecting information, they are so much concerned with telling facts promptly and attractively that they lose something in accuracy. In magazines, too, interest is often the main object. The difficulty is not that periodicals are intentionally inaccurate, but that they are so unintentionally from the necessity of haste and the occasional sacrifice of information to interest. Accurate information must always be the main concern of a student in collecting facts. Interest he will supply himself by his own way of adapting the subject to his own audience. Periodicals are written to tell us at once what is going on now. In current matters which concern us deeply, or which are in dispute, we compare two or three accounts, checking off one by the other. Excellent practice in discrimination such comparison is most surely; but it may be very difficult. Now the author of a book has presumably done this sifting for us. At least he has had the time; at least, we may expect him to have selected the most important facts and cast aside the trivial. A book, then, is more promising as a source of information. For the rest, we must measure it by its reputation and by comparison with other books, and in cases of dispute know what is the authority.

But not all books are superior to all periodicals. Some books are trash; some few periodicals are themselves authorities in special fields. Moreover, for certain subjects of current discussion the use of periodicals is necessary. What then? Compare and choose. Don't accept blindly anything printed. Use books as well as periodicals; for even current topics must be discussed with reference to our previous knowledge and ideas. Form a habit of going back, where there is any dispute, as near as possible to authority, and consequently learn where authority is to be looked for. Learn first to use books, and in every investigation begin with books.

For example, to argue the advisability of annexing Cuba, one must investigate periodicals. But to begin by reading magazine articles on Cuba indiscriminately will probably waste time. The first thing to consult is an atlas, then one of the briefer cyclopedias, then a statistical almanac. After getting one's bearings in this way from undisputed sources, one may choose from *Poole's Index to Periodical Literature* certain articles which seem promising by the reputation of the author and the periodical and by being sufficiently recent. But if he is to debate, he should not forget to look also for the report of some government official or commission.

Or does some one wish to decide for himself whether the United States should maintain the duty on wood pulp? He cannot even read a magazine article on the subject intelligently until he knows what wood pulp is, what the duty on it is, and why. These three pieces of fundamental information are to be found in books of reference. Which?

Should the Japanese children in San Francisco be segregated in a school for Orientals? The question is so recent that there are no special books on it. Frame some pertinent questions for preliminary investigation in reference books.

Group the following according to the kind of reference books in which most of the facts are to be found. Bring in notes on such of them, and in such way, as may be assigned (see above). As early as possible in the investigation limit the field.

Argentina.	Ptolemaic System.	Monastery.
<i>Magna Charta.</i>	Primary.	Cabinet.
Temple.	University.	Tariff.
Weather Bureau.	Venice.	Castle.
Alfalfa.	Panama Canal.	Filters.
Congo.	Monroe Doctrine.	
Forestry.	Cyclone.	Cotton.
Mirage.	Legion.	
Joan of Arc.	Louisiana Purchase.	
Cobalt.	Temple.	
Wheat.	Siberia.	

To compare and choose in a library, then, means to select what is important for one's own purpose, to take concise notes on cards from more than one book, to work from general summaries and guides to the particulars that are needed, to know where to begin and how to go from book to book. It means to discriminate more and more among sources of information, until one learns the meaning of accuracy and the value of authority. This is a long task; but, its importance in education once understood, it is neither hard nor dull. For it is the way in which any intelligent citizen may become a master of books.

3. GROUPING FACTS

The next step is to sort and group the notes under headings. Only so can they be used. A good deal of this sorting and grouping is done while one is collecting. For a wise investigator does not heap up notes miscellaneously; he pauses again and again to take his bearings (page 230); the material that he has already he groups by writing at the top of his cards trial headings. Thus he can see where he has much material and where he has little by bringing together the notes that are most closely related. Though these headings may need revision afterward in the light of further

knowledge, and though the notes under them may need to be subdivided, still the trial headings help him to see his way as he goes. But when at last the reading is finished, when the material seems sufficient for the purpose, it is better to write out all these headings on a large sheet, so as to look them over together, to make them more precise, to weed out repetitions, to close side-tracks, — in short, to make a clear chart of the whole. The object of such a chart or plan of the whole is to make all the main headings bear directly upon the single underlying idea that the exposition aims to explain or the argument to prove, and to make each sub-heading bear directly upon some main heading. It is a plan for analysis, a plan for the writer or speaker himself, a means to arrange each separate piece of information where it belongs. Its aim is not so much to determine the paragraphs in which the essay will finally be written, or the speech spoken, as to determine which are the main points, the larger ideas that support the whole object of the composition directly; and which are the subordinate points, the facts that support the object indirectly by supporting these main ideas. Therefore such an analysis has for its chief business to settle these main ideas. The paragraphs will be settled later. First comes the necessity of dividing the material by points. For we can hardly make a plan of presentation to others until we have first sorted out the material by a plan of analysis for ourselves. Before we determine how to speak, we must determine exactly what we know.

Fixing the Single Point in a Sentence. — Of course, this cannot be done at all until we have fixed the goal, the single object of the whole composition. For debate this is always settled in advance in a single sentence, or proposition. *Licenses for Newsboys* — no one can debate that; it is too vague. *Licenses from the Board of Aldermen should be re-*

quired of all newsboys — at once we know from this complete and definite statement exactly what is to be proved. *Municipal Ownership of Gas Works* — what of it? *Our city should own and operate its gas works* — at once the object is clear. Argument cannot come to anything until its object is fixed in a complete sentence, a definite proposition. If the task is, not to prove something, but merely to explain, the whole essay need not always be held to a single proposition; but it still needs to be clearly limited. *Chivalry* is too vague for a guide. One might read and write on that for weeks without arriving at any result definite enough to be comprehended as a whole; and, until it is comprehended as a whole, no subject can be brought to bear. *The Training of a Medieval Boy in Chivalry, Two Lessons of Chivalry for Our Times*, — either of these is such a limitation of the subject as should be fixed in advance, or settled after a little preliminary reading. And even for exposition it is often possible to fix the object in a sentence. *Chivalry taught a medieval boy honor and courtesy* — though that needs no proof, merely explanation, still the putting of it into a sentence makes the whole task easier. For argument always, then, and for exposition usually, fix the object of the whole in a single sentence. No one can go far in any composition of facts without knowing where he is to come out. The first question of analysis is, What is your goal?

Frame propositions for debates on the following:

1. Vivisection.
2. Suburbs or City Flat?
3. Military Drill in Schools.
4. Immigration.
5. Prohibition.

Brief, or Plan for Analysis of Argument. — Suppose, now, the goal of an argument fixed in a proposition. We will

begin with argument because it is easier to analyze, and because the plan for analysis of argument can be adapted with slight change to exposition also. The simplest plan for analysis of argument is: (1) to write at the head of a large sheet the proposition to be proved; (2) to write underneath, numbering them A, B, C, etc., with spaces between, what seem to be the largest reasons for the proposition, those main reasons that include minor reasons within themselves and support the proposition directly; (3) to write underneath each of these, numbering them 1, 2, 3, etc., in the blank spaces, the reasons for this larger reason; (4) to write underneath 1, or 2, or 3, numbering them a, b, c, etc., the facts that in turn go to prove this. This sort of plan is often called a *brief*. It shows at a glance both the whole line of argument and the bearing of each part, even of each separate fact. It shows which are the main arguments, which are the minor ones. It shows how every bit of the material bears, whether as a main point supporting the proposition directly, or as a minor point supporting one of these main points. It is a complete chart or guide to the material. After it has been thought out and revised, it will furnish a complete index to the notes; for these can easily be numbered and grouped according to the plan.

SPECIMEN BRIEF

PROPOSITION

Licenses from the Board of Aldermen should be required of all newsboys in this city.

BRIEF FOR THE AFFIRMATIVE

A. *Some measure of restriction is demanded.*

1. Forty per cent of our newsboys are under twelve.

a. This is the estimate of the special committee of the Board of Aldermen.

2. Such work at their age stunts their growth.

3. It also hurts their schooling.
 - a. Late hours unfit them for study.
4. Worst of all, it hurts their morals.
 - a. They are thrown on the street among evil influences.

B. *Restriction by parents is insufficient.*

1. Some boys are put to this work by their parents.
2. Many parents see no harm in it.
 - a. Many are too ignorant, or indifferent.
 - b. Many are immigrants, unaccustomed to our American standard of living.
3. In general, newsboys belong to a class unprotected by good home influences.

C. *Restriction by the State is in line with our wisest legislation.*

1. It is in line with other restrictions on child labor.
 - a. Factories are forbidden by law to employ children under a certain age.
 - b. It supports the law of compulsory schooling.

D. *The argument that the measure would work hardship is insufficient.*

1. No fee is proposed for the license.
2. Only those would be prohibited who would suffer more in the end from selling papers.
3. The few possible cases of actual hardship could be met otherwise by the city.
4. The main consideration must be the good to the whole community resulting from the protection of boys now unprotected.
 - a. These boys are to be citizens.
 - b. Our future depends on the health and education of our citizens.

E. *The particular restriction proposed is best.*

1. Simply to pass a law setting an age limit would be insufficient.
 - a. It could be enforced only with great difficulty.
 - (1) Even in factories, where the workers are all together, the federal law is sometimes evaded.

2. Licensing gives the opportunity to judge each case on its merits, and precludes unnecessary hardship.

3. The Board of Aldermen is the proper municipal body for this work.

a. It deals with licenses in general.

b. It can handle this additional work with the least possible expense to taxpayers.

The object of this system of analysis is to bring every bit of material into some definite bearing. It makes us ask concerning every note, Just what does that prove? To this end, every part must be expressed in a sentence. Only thus can its bearing be determined. If some fact will not fit into the system, it is in the wrong place, or its bearing is not clearly understood, or it has no bearing at all and should therefore be omitted. Each detail of the argument (*a*, *b*, or *c*) must read as a reason for the larger point (1, 2, or 3) under which it stands, as if it were preceded by the conjunction *for*. Each larger point in turn (1, 2, or 3) must read as a reason for the still larger point (*A*, *B*, or *C*) under which it stands. Each largest point (*A*, *B*, or *C*) must read as a direct reason for the proposition. Or, to put it the other way, *A*, *B*, *C*, etc., are reasons for the proposition; 1, 2, 3, etc., are reasons for *A* or *B* or *C*, etc.; *a*, *b*, *c*, etc., are reasons for 1 or 2 or 3, etc. When successive arguments are designated by the same type, as 1 and 2, they are understood to be co-ordinate, as if they were connected by the conjunction *and*; when successive arguments are designated by difference of type, as 1 and *a*, the second is understood to be subordinate to the first, as if they were connected by the conjunction *for*. This distinction is marked still more clearly, as in the plan above, by keeping co-ordinate arguments in the same column and setting subordinate arguments a little to the right. In a word, the object of this system is to classify the notes.

Though at first the system may seem complicated, it is never in fact more complicated than the material to which it is applied. A long investigation of a subject in many aspects might, indeed, require not only *A*'s, *I*'s, and *a*'s, but all the other types in the font. But we are not supposing anything so extraordinary; and in ordinary arguments the plan may be applied quite simply. In fact, it is of constant use in arguments that require no research at all.

For, not Therefore. — Still, a few cautions will save trouble. First, this system of analysis excludes the word *therefore*. It would, indeed, be just as logical to turn the system upside down, thus:

a. Factories are forbidden by law to employ children under a certain age.

b. Such licenses would support the law of compulsory schooling. *Therefore*

1. The proposed licenses are in line with other restrictions on child labor. *Therefore*

C. They are in line with our wisest social legislation. *Therefore*

(Proposition) Licenses from the Board of Aldermen should be required of all newsboys.

And in delivering this argument one might follow that order (see page 238). But, to give such prominence to the main points as will make them catch the eye, we have started the other way about; and, having started that way, we must not change; we must keep one way throughout. Otherwise the plan will break down. The conjunction implied must always be *for*. When you feel like using *therefore*, simply reverse the order. This applies, of course, simply to the brief, not at all to the order of sentences in a spoken paragraph.

How to Bring Opposing Arguments into the Brief. — Secondly, this system includes, not only the positive arguments

on one's own side, but also the answers to the arguments of opponents. It is all made from one point of view, for no one can argue on both sides at once; but it takes account of the other point of view by bringing in opposing arguments to answer them. This is called *rebuttal*. In the plan above, the main point *D*, and the subordinate point 1 under *E*, are rebuttals; for rebuttal may come in either as a main point or as a subordinate point. In either case it comes into the plan always in this one way:

E. The argument (or assertion) that (*Here state the opposing argument*) is insufficient (or not supported by the facts, or unwarranted. (*Here sum up in a word or phrase the way in which you meet the opposing argument.*)

1. *Here state a fact or reason in support of your objection.*
2. *Here state a fact or reason in support of your objection; etc.*

Strict adherence to this form makes possible the bringing in of any argument whatsoever for the other side without upsetting the plan as a plan for one's own side. It has the further advantage of showing just how an opposing argument, as well as a positive argument of one's own, bears on the whole debate. Best of all, it sets up the other side only to knock it down. It forces one to answer. It forces him to consider just where and how any attack should be met. No one can argue well without considering the other side; neither can any one argue well without staying on his own side while he meets the other side squarely. For the way to rebut is so to turn the arguments of an adversary as to strengthen one's own case.

Division Under a Few Main Heads. — Finally, the very object of a brief being to bring out the main points, these main points should be few. A plan consisting of ten main points is a plan not carefully thought out. Some of these ten points thus set down as co-ordinate must in fact be

subordinate to the others; for any ordinary argument can be grouped under four or five cardinal points, and many a good argument has had only two or three. All the others group themselves under these. A man who has the proverbial twenty reasons for a proposition has some larger and some smaller; and the smaller ones, the details, should be grouped under the larger. Indeed, the chief service of this sort of plan-making is to develop a habit of looking, in any question, for the main lines, the large considerations, the great points, — in a word, to teach grouping. People who can thus group readily are said to see through a question; and no one is further from seeing through a question than the man who has merely accumulated a mass of facts without classification, who has no better idea of discussion than merely to rehearse one fact after another. He is like the man in the proverb who could not see the forest for the trees. He is bewildered by his own knowledge because his knowledge is disorderly. Apply the brief system so as to group your material finally under a few main sentences which you feel to be necessary and vital.

Do not be discouraged if you cannot settle these main headings at first. They require thought. Often the subordinate headings are seen first. Often eight, or even ten, headings will serve well enough for a while, until the better grouping comes with thought. But stop to think. Take your bearings after you have read a little; take them again before you read each new book. Make some sort of classification as you go along. Otherwise you will probably waste time (see page 230) and certainly increase the difficulty of planning at the end. Repeatedly question, not only the book for facts, but yourself as to how you expect to bring them to bear. Instead of hurrying to accumulate, let a plan grow in your mind by successive revisions.

Exercises in Brief-Drawing

Put into the form of a brief your reasons for preferring a certain town, school, business, college, or profession. Bring in at least one point of rebuttal: *i.e.*, answer at least one main objection, as well as any minor ones that apply to your supporting arguments.

Put into the form of a brief the arguments probably used by Columbus to secure the help of the court of Spain; the arguments of Franklin before the Philadelphia convention in 1776 ("We must hang together or we shall hang separately").

Put into the form of a brief your reasons for (or against) one of the following:

1. Ancient warfare made soldiers braver than modern warfare does.
2. Attempts to reach the North Pole have proved themselves worth while.
3. Brutus was right in joining the conspiracy to kill Caesar.
4. Shylock was wronged.
5. The government of England is more truly representative of the wishes of the people than the government of the United States.
6. Savings banks should be operated in connection with the post-office.
7. Business is a school of insincerity.

Specimen Briefs

The following briefs, while they exemplify more fully the method of brief-drawing, may serve also as preliminary outlines for debate. Though the subjects demand investigation of facts, these briefs will save time enough to make class debates possible earlier and more frequently. Adaptation should be freely made by omission, insertion, or rearrangement; and each speech will require a new plan by paragraphs (page 238).

PROPOSITION

Cooper's Indians are true to life.

STATEMENT (see pages 225-256, 265)

The American Indians represented in Cooper's novels are types of several tribes in the successive periods from the time of the French wars to the time when the westward migration had passed the Mississippi. Indians of later periods are without the scope of this discussion; and the Indians of each novel are to be judged by their faithfulness to the period and the tribes treated. The novels in question are the *Leatherstocking Tales*.

True to life does not exclude minor inaccuracies, provided that these do not distort the general impression. By *true to life* we mean like the Indians of those times in all essentials. Thus we may call Shakespeare's Juliet true to life, in spite of minor inaccuracies of detail, provided that Juliet is essentially like Italian girls of that time.

BRIEF FOR THE AFFIRMATIVE

A. *Cooper's distinctions of the traits of different tribes are generally supported by history.*

1. It is unhistorical to talk of Indians in general as if they were, or had been, all alike.

a. In fact, there were marked tribal differences.

(1) (Give instances.)

2. The Delawares, to whom Cooper assigns the nobler Indian traits, were in fact superior.

a. Under the Moravian missionaries they reached a high degree of civilization before the Revolution.

(1) They followed agriculture regularly.

(2) Their religion withstood the severest persecution.

3. The Hurons, or Iroquois, of Cooper's novels are essentially like the actual Hurons of history.

a. These were the tribes whose ferocity and stealth made the name of Indian execrated.

(1) They tortured the Jesuit missionaries in Canada.

(2) etc., etc.

B. *The representation of certain Indians as having noble traits is warranted by history.*

1. The common ignoring of such traits among the Indians is no proof of their absence.

a. Many writers have been prejudiced by experiences with later Indians degraded by contact with civilization.

(1) It is prejudice to assert that Uncas is made too noble because he is not like the blanket Indians of our reservations.

2. Indian fidelity is well attested.

a. (Give instances from history.)

3, 4, 5, etc. (Establish other noble qualities; e.g., fortitude, generosity, eloquence.)

6. The proverbial Indian treachery is insufficient to prove the contrary.

a. Treachery must not be confused with cunning

(1) Cunning has not in other races precluded noble qualities.

(a) (Give instances.)

(2) Cunning is demanded by warfare in general, and especially by the necessities of Indian warfare.

b. Cooper is warranted by history in making treachery a vice, not of all Indians, but of certain individuals and tribes.

c. Indian treachery arose in many cases from extreme provocation.

7. The assertion that Indians as a race are incapable of much religious development is insufficient to prove the contrary.

a. Some Indians have developed religiously.

b. The failure of the race to develop religiously as a race is not always, nor altogether, to their discredit.

(1) Missionary efforts have often been misdirected.

(2) Indians have had too much reason to distrust all agents of the white man.

C. *The assertion that Cooper's Indians are stage Indians is not in point.*

1. It is putting the cart before the horse. }

a. Whatever likeness exists between Cooper's Indians and those seen in popular melodrama is due to imitation of Cooper.

2. We are to judge, not imitations of Cooper, but Cooper himself.

J BRIEF FOR THE NEGATIVE

A. *Cooper's Indians are superior morally to the Indians of history.*

1. Cooper shows little of the characteristic Indian defects.

a. The most characteristic Indian vice is intemperance.

b. The Indians' treatment of their women at once marks their moral inferiority.

c. Indian treachery was more general than we should suppose from reading Cooper.

(1) (Give testimony of explorers and soldiers.)

2. Indian bravery has very little moral quality.

a. They always preferred ambush, surprise, and outnumbering.

b. Their fortitude was that of animals at bay.

3. Cooper's bad Indians are not enough to prove the contrary.

a. The general impression left by his books is that the Indians of those times were higher morally than in fact they were.

4. Missionary efforts among Indians of Cooper's time were generally fruitless.

a. Conversions were superficial, and Indian Christianity mainly nominal.

B. *Cooper's Indians are superior mentally to the Indians of history.*

1. The most characteristic mental trait of the actual Indians of those times was savage childishness.

a. They could always be swayed by a little tinsel and glitter.

(1) They gave land for beads.

b. Their so-called dignity was mere lack of expression.

2. The actual Indian has never shown much foresight.

a. His cunning is of a low order.

(1) He has been repeatedly and easily deceived.

b. He has never shown himself capable of large plans.

3. So-called Indian oratory is no proof of the contrary.

a. Indian speeches are remarkable principally for bombast.

4. Modern progress of Indians in education is no proof of the contrary.

a. It was late and slow.

(1) Very few full-blood Indians have advanced far even to-day.

(2) The tendency to relapse to nomadic life has reappeared again and again.

b. The Indians of the time of Cooper's novels had not even begun this progress.

C. *Cooper constantly casts over Indian life a false glamour of romance.*

1. Indian life in reality was narrow, mean, and sordid.

a. It was a hand-to-mouth existence.

(1) It made no provision for the future.

(2) It was subject to famine and sickness.

b. It was conspicuously lacking in that noble freedom and security which are so attractive in Cooper's novels.

(1) Indian life was not the life of boys on a camping trip.

2. The justification of Cooper's representations as making his books more interesting is not in point.

a. This argument begs the question.

(1) The question is not why the books are not true to life, but whether they are true or not.

(N. B. *This brief is merely an outline of main considerations. Actual discussion of this subject requires that these should be supported by an abundance of details, on the one hand from Cooper's novels, on the other from recognized authorities on Indian life and character.*)

PROPOSITION

The United States should have a large navy.

STATEMENT

The proposition presupposes that our navy now is not large; i.e., it contemplates a change of policy looking toward the making

of our navy approximately equal in numbers to that of any nation which is recognized as having, or planning to have, a large navy. It deals, not directly with the efficiency of our navy, but rather with its size.

BRIEF FOR THE AFFIRMATIVE

A. *The objection on the ground of expense is insufficient.*

1. A large navy would be our cheapest defense in the end.

a. We must otherwise greatly increase our standing army.

b. A large standing army is more costly than a large

navy.

c. Really adequate coast defenses, if we concede the possibility of making coast defenses adequate, would cost no less than a large navy.

d. The cost of a large navy should be reckoned as insurance.

(1) The damage that might be inflicted by a hostile fleet would be far more costly than the largest of navies.

2. The country is well able to bear the expense of a large navy.

B. *A large navy is demanded for the protection of our own coasts.*

1. Our coast-line is miles.

2. We are open to attack from either the east or the west.

3. Our largest cities are on our coasts or navigable waterways.

4. Coast defenses are inadequate against modern war vessels.

5. The Panama Canal will not meet this need.

a. The canal itself will need protection in time of war.

C. *A large navy is demanded by our interests abroad.*

1. The growth of our foreign interests has far outstripped that of our navy.

2. The old arguments against a large navy no longer hold good.

a. We are no longer an isolated power.

(1) Our foreign possessions have brought us into world politics.

b. Our foreign commerce is enormous and increasing.

3. Our distant possessions need protection.

a. (Show that Hawaii needs protection.)

b. (Show that the Philippines need protection.)

4. The situation in the East may at any time become dangerous to us.

a. The partition of China may precipitate a world war.

b. A war with Japan must be reckoned with.

(1) Japan is very formidable, and is increasing in strength.

(2) Japan is our commercial rival, especially in the trade with the East.

(3) Japan has already clashed with us.

(a) The dispute over Japanese children in the San Francisco public schools was no slight matter.

(4) Japan is extremely proud and sensitive.

5. We need a large navy for the maintenance of the Monroe Doctrine.

a. We must maintain this for our own interests.

b. We must maintain this for the interests of the South American states.

c. We cannot maintain it without a large navy.

(1) It is not a recognized part of international law.

(2) The interests of other nations in South America are in some cases larger than ours.

(a) In general, European nations have more commerce with South America than we.

(b) In particular, Germany has large interests in Brazil, not only through commerce, but through thousands of German colonists there.

(3) The blockade of the ports of Venezuela by foreign warships is a case in point.

D. *The argument from the improbability of war is insufficient.*

1. A large navy is the best safeguard of peace.

2. General international arbitration is still remote.

a. The Hague Tribunal has no power to enforce its decisions.

3. Japan and Russia recently fought a terrible war.

4. We ourselves recently fought with Spain.
5. War with Japan is by no means improbable.
 - a. (See above.)

BRIEF FOR THE NEGATIVE

A. *A large navy is contrary to our historic policy.*

1. We have never maintained a war footing.
2. The argument that our historic policy is antiquated in view of our increased foreign interests is unsound.

a. We have entered and maintained these foreign interests without protest from foreign nations.

b. It has always been, and is now, an advantage to us in foreign relations that we are known to maintain a peace footing as distinct from the war footing of other nations.

c. We still have no "entangling alliances."

d. Our foreign interests create no probability of war.

(1) There is no evidence that any other power desires the Philippines.

(2) We are not menaced by the partition of China.

(a) This is made yearly less probable by the growing strength of China.

(b) Our only interest in China is in assisting to keep the "open door."

3. The argument that the policy of a large navy is already justified by the recent increase of our navy is unsound.

a. Our present navy bears about the same proportion to the large navies of other powers and to our total coast line and territory as before.

b. The negative may admit an increase of our navy proportional to the increase of our coast line and territory.

(1) Such increase would not make our navy large, as navies go.

B. *Competition in number of ships with other powers would be either futile or burdensome.*

1. Unless we built ship for ship, like Japan, we should be little better off.

a. We must choose between a peace footing and a war footing.

2. To build ship for ship involves great increase of taxation.

a. Japan is ground down by taxes.

(1) Taxes for military establishment keep down the standard of living in Japan.

b. In 1907 the British navy cost more than half as much again as ours.

c. The ship-for-ship policy opens the way for extravagance with public money.

3. The argument that a large navy promotes peace is insufficient.

a. We may better seek peace by keeping a peace basis.

(1) We have followed this policy successfully through all our history.

(2) The Roman proverb, "In time of peace prepare for war," does not apply.

(*a*) In those warlike times and that warlike nation, peace meant merely the interval between wars.

b. A large navy fosters a warlike spirit.

C. *A large navy is not warranted by danger of war.*

1. The tendency of our time is increasingly toward world peace.

a. This is strikingly shown by the Hague Tribunal.

(1) The argument that the Hague Tribunal lacks power is insufficient.

(*a*) It has great and increasing influence.

(*b*) It has made substantial progress in decreasing readiness to resort to war.

b. Arbitration treaties are more and more common.

2. The affirmative cannot show definite probability of a war with any foreign power.

a. War with Japan was never probable.

(1) The war talk was confined to sensational newspapers in both countries.

(2) The idea was repudiated by the statesmen of both countries.

b. War with Japan is highly improbable.

(1) Japan would have nothing to gain and everything to lose.

(2) Japan would hardly dare to send a fleet to our Pacific coast.

(a) She has no coaling stations on this side of the Pacific.

3. The maintenance of the Monroe Doctrine does not demand a large navy.

a. The doctrine is already respected and accepted.

(1) It is generally recognized as best for international interests.

D. *A large navy can be built and maintained only at the sacrifice of more important interests.*

1. The most important general interest of our country is the standard of living, and this is directly affected by taxation.

2. Without large increase in taxation a large navy could not be built except by hampering the development of our internal resources.

a. *E.g.*, the federal government has now in hand large projects of irrigation.

3. Even our foreign relations can be served better without a large navy.

a. There is great need of larger appropriations for our consular and diplomatic service.

Other outline briefs may be adapted from Ringwalt's *Briefs on Public Questions* (Longmans, Green, and Co.).

Adaptation of the Brief to Analysis of Exposition. — Every course of argument consists of two processes: (1) statement of facts, or explanation; (2) drawing conclusions from facts, or inference. The former is exposition; the latter, argument proper. In the former we are telling what the facts are, and grouping them only to make clearer what every one admits concerning them; in the latter we are grouping the facts to show what we believe, and wish others to believe,

that they prove. By this is not meant that every argument must begin with exposition, nor that exposition and argument are entirely distinct. Exposition may, indeed, be used as a separate and introductory stage before argument proper begins; and many disputes are clarified by a preliminary agreement as to what the undisputed facts are and what the words mean in which they are discussed. But, in general, statement of facts and inference from facts, exposition and argument, are constantly intermingled. As we find facts, we can hardly help drawing conclusions from them; as we argue, we must often stop to explain. Nor should we try to be always either purely expository or purely argumentative. This would unduly hamper the natural impulses of thought and speech. But we should clearly distinguish. We should know when we, or our opponents, are stating facts; when we or they are drawing conclusions. Otherwise we cannot analyze a course of argument or discern how to meet it. We must not let pass, in reading or debate, as mere statement of fact what conceals an inference that may be disputed. Statement and proof may be mingled; but they must not be confused. What is put forward as mere statement of facts sometimes implies certain inferences that ought to be challenged. Every one who wishes to gain power in argument must accustom himself to distinguish between the two. He must neither ignore, nor let others ignore, in debate this fundamental distinction. He must learn to estimate facts as facts, according to the authority upon which they are asserted; inferences as inferences, according to the logic with which they are inferred. (For examples of pure exposition, see the preliminary *statements* at pages 247 and 250; for tests of the logic of inference, pages 267-272.

This distinction between exposition and argument proper affects the use, in one or the other, of the brief, or plan of

analysis outlined above. When this plan is used merely to group facts for exposition, it does not require that every point should go to prove the point next above it. A supporting point in such a plan for exposition may be merely one part or aspect of its main point; or it may be merely an illustration, or even an exception. The plan need not even be cast throughout in sentences. The plan of this chapter, for instance, in the table of contents, though it could readily be cast in sentences throughout, would gain nothing thereby in clearness; for I am not trying to prove anything, only to explain. But when the brief system is applied to argument, then only one relation is admissible. Every fact must go to prove the inference under which it is grouped; every inference in turn must go to prove the larger inference next above it. In every case, the relation of larger part to smaller is the single relation expressed by the conjunction *for*, until we come down to the facts. These are at the bottom of all. We must be sure that they are facts; else the superstructure of inference will fall. The very form of the plan, then, may show the difference between stating and proving.

In the following brief of a part of Burke's speech on *Conciliation with America* notice this difference between the more expository parts *A* and *C*, and the more strictly argumentative parts *B* and *D*. In the former, clearness is increased by expressing the supporting parts as concisely as possible in phrases; in the latter, the bearing of fact on argument, and of argument on larger argument, needs to be shown exactly and fully by summing up each part in a sentence. When the whole composition is expository, the brief may be cast largely in phrases, like the expository parts *A* and *C* below; but where the bearing would be in the least doubtful, the brief should resort to sentences even in exposition.

BURKE'S SPEECH ON CONCILIATION WITH AMERICA (1775)

PROPOSITION

Great Britain should concede to the demands of her American colonies for representation.

A. *Conciliation is warranted by the importance of the colonies,*

1. in population.

a. two millions.

2. in commerce.

a. now almost equal to the total commerce of Great Britain seventy years ago.

b. in Pennsylvania increased fifty-fold in the same period.

3. in agriculture.

4. in fisheries.

B. *Force will not answer.*

1. It is temporary.

2. It is uncertain.

3. It impairs its own object.

4. It is contrary to experience.

C. *Conciliation is demanded by an American spirit of liberty rooted in*

1. English descent.

2. provincial assemblies.

3. dissent in the northern colonies.

4. slave-owning in the southern colonies.

5. fondness for legal studies.

6. remoteness.

D. *Conciliation is the only feasible plan.*

1. Only three courses are open:

a. to remove the causes of the American spirit of liberty.

b. to prosecute it as criminal.

c. to comply with it as necessary.

2. To remove the causes is impossible.

a. To stop grants of land would be idle.

- (1) There is plenty of land already granted.
- (2) The people would occupy without grants.
- b. We cannot alter their descent.
- c. To check their commerce would be preposterous.
 - (1) We should thereby harm ourselves.
- d. To repress their religion is impracticable.
 - (1) The only means to this end are execrable.
 - (2) Such means would also be insufficient.
- e. To enfranchise the Southern slaves would not serve our turn.
 - (1) The slaves might refuse.
 - (2) Their masters might arm them.
- f. We cannot pump the ocean dry.
- 3. To prosecute the colonies as criminal is impracticable.
 - a. We cannot indict a whole people.
 - b. It would subvert the very idea of our Empire.
 - c. We should have to be both prosecutor and judge.
 - d. It is inconsistent with our procedure toward Massachusetts.
 - f. Our penal laws against the colonies have failed.
- E. etc. (to be carried out by the student).

Draw up a brief for a speech or essay on *The Ideal Public School Building*. The theme being mainly expository, most of the divisions may be expressed in words or phrases; *e.g.*:

D. *Ventilation*.

- 1. natural.
 - a. rooms not crowded.
 - b. large windows.
- 2. artificial.
 - a. etc.

But use sentences wherever you argue a disputed point, and wherever else the bearing might not otherwise be quite clear; *e.g.*:

F. *Beauty*.

- 1. The objection that beauty is not necessary is insufficient.
 - a. American public schools are not confined strictly to necessities.

(1) Some studies have little practical use.

(2) Playgrounds are not strictly necessary.

b. Beauty in the school building is of benefit to the whole community.

(1) Most of our citizens are educated in public schools.

(2) Daily association with meanness and ugliness narrows the mind; with things of beauty, expands the mind.

(3) The benefit is greatest to the poorer children.

(a) These see little beauty at home.

(4) School buildings ought to be made beautiful on the same principle by which public parks and monuments are made beautiful.

2. Beauty of architecture is entirely consistent with utility.

a. etc.

3. (expository) Suggestions for beauty of decoration.

a. pictures.

b. etc.

CHAPTER VII

CLEARNESS IN BRINGING BOOKS TO BEAR: PRESENTATION OF READING IN ARGUMENT AND EXPOSITION

For themes in connection with the first part of this chapter, see the head note to Chapter vi. Themes in connection with §3, and the latter part of §2, should be expositions as prescribed in the text.

1. THE ORAL PRESENTATION OF FACTS

Brief and Paragraph Plan. — The kind of plan that we have been considering, the index plan or brief, is a plan of analysis. Its purpose is to classify the results of study for reference, not to arrange them in the best order for presentation. This latter purpose it rarely serves well. Sometimes such a plan of analysis is used without any intention of speaking or writing, merely for study. Students use it, for instance, to classify their notes of reading in history. More often it is used in preparing to speak or write; but in that case it is only the second stage of preparation, not the final stage. The first stage is to take notes; the second stage is to classify notes; the final stage is to make a plan, not merely for classification, but for effective presentation; and this last is a plan by paragraphs. No one can argue effectively by merely speaking off, or writing off, his brief as it stands. To rehearse a brief, merely putting in connectives, is to be formal and dull. The brief tells a debater just how a certain fact or argument comes in. He knows where it is among his notes. He can put his finger

on it. But the brief does not always tell him at what point in the course of his speech he can use that fact most effectively; it does not determine the order of his paragraphs. The brief, for instance, always puts the main conclusion first, the supporting reasons afterwards; but often, for effective speaking or writing, the better order would be just the reverse; often we gain by leading up to a conclusion rather than by announcing it before we prove it. Again, the brief takes no account of iteration and of bringing home at the close. Nor does the brief tell always how to proportion the space. One of the subordinate points in the brief—subordinate in the sense of proving a point indirectly—may deserve more time than a main point. The main points, of course, are the main things to bring out; but, since they depend on the reasons written under them in the brief, it sometimes takes longer to establish these supporting reasons than to draw the conclusion. Finally, the brief is often too elaborate to speak from. A speech needs a fairly simple plan in order to be understood. All this means, not that the brief system is defective, but that it is not meant to speak or write from. It is adapted rather to studying a subject than to presenting. No single plan can thoroughly well serve both these purposes when the reading required is at all extensive. Therefore it is better, after making a brief, to make also a paragraph plan. The brief has settled the classification; the paragraph plan will settle the order of presentation.

Nor is the making of two plans a waste of time. Really it is economical to do these two things separately instead of jumbling them together. And the two plans will not differ entirely. The order of main points will probably be the same in both; it is only the supporting points that are likely to need rearrangement. But the paragraphs should be planned without reference to the numbers of the brief.

A with all its sub-headings may, perhaps, go well into one paragraph, while 1 under *B*, perhaps, needs a paragraph to itself, or even *b* under 2 under *B*. In planning paragraphs we are planning stages by which to lead our hearers along steadily. We are thinking solely of the coherence of the whole and of the amplification needed by a given part. By disregarding the divisions of the brief, which were made for another purpose, we set ourselves free to think solely of effective order. First, plan a brief to classify the notes; then plan the paragraphs by which to carry on the speech.

For convenience, the chapter on the paragraph (Part I., Chapter iv) is summarized as follows:

1. In planning an extended composition for coherence divide the subject into paragraphs. A paragraph is a certain part of a subject, set off in the plan to be discussed by itself. The whole should be divided into paragraphs before any part is written or spoken.

2. Then arrange the paragraphs in such order as will help an easy following from each to the next. A paragraph is a distinct part of a composition planned for that place where it will best help along the whole. Hence its subject must be expressed in the plan of presentation as a sentence. The subject-sentence is commonly put also at the beginning of the written or spoken paragraph, and repeated in some form at the end for emphasis. Thus, for clearness, a paragraph may begin and end with its subject.

After the whole is thus planned by subject-sentences arranged in order, each paragraph is developed, by instances, comparison and contrast, illustration, and iteration (and, in argument, by proofs), in the same way as a separate short composition. Careful emphasis in each paragraph also serves directly the coherence of the whole by making easier the linking of paragraph to paragraph. This linking is of especial importance in oral address, and most important in oral argument. In argument, therefore, take pains to emphasize the point of each paragraph at the end;

and begin the next paragraph by referring briefly to this preceding point in such a way as to connect it with the new point.

Compare the following plan by paragraphs with the brief of the same subject at page 240.

Licenses from the Board of Aldermen should be required of all newsboys in this city.

I. Many of our newsboys are too young to work on the streets without harm to health and education.

II. The harm to their morals still more emphatically urges some restriction upon this form of child labor.

III. The newsboys' parents are generally too poor or too ignorant to protect them.

IV. Therefore the State must step in, just as it does in the case of child labor in factories.

V. Without this further restriction, the wise law of compulsory schooling is in many cases of no avail.

VI. The risk of hardship to individuals is slight.

VII. The ordinance proposed is wiser than a general law setting an age limit.

VIII. The additional burden of taxation is nothing compared to the gain of the boys.

IX. The strongest consideration is that unless we save these boys now, we shall endanger our whole community in the future.

Make a similar plan by paragraphs for one of the subjects of the specimen briefs in the preceding chapter.¹ Such a written plan by paragraphs will be required as a preliminary to each theme. The progress of thought from paragraph to paragraph should be shown by the conjunctions or repeated words that connect the subject-sentences in the plan. Thus the following paragraph plan of the close of Macaulay's Essay on *History* gives not only the point of each paragraph, but the connected progress of the whole sequence of thought. Similar digests of other essays, or of expository or argumentative (not narrative or descriptive) chapters in books, may be assigned for additional practice in review of the paragraph.

¹ For other models, see Part I., pages 165-180.

MACAULAY: THE IDEAL HISTORIAN

1. The immense popularity of biographies shows that an historian also might convey his information with more interest.

2. Interesting details seem to be regarded by historians as beneath the dignity of their subject.

3. Yet the importance of any detail is measured only by its significance.

4. Clarendon's history, for instance, would be, not only more interesting, but more accurate, if it had more personal details.

5. And, on the other hand, many events recorded by historians as important do not indicate the progress of society.

6. Indeed, the method of historians seems sometimes like that of the gnat who judged the elephant by his hide.

7. And the fallacy of such inferences in histories is plain from examples.

8. Just estimates from history, like just estimates from travel, cannot be made from the surface.

9. Therefore the historian should give to events prominence in proportion as they reveal the condition of society.

10. The ideal historian would add to battles and changes of ministry the materials now used exclusively by the novelist.

11. He would picture society from the highest to the lowest.

12. Thus his instruction would be at once more vivid and more practical.

13. Though such an historian would be a prodigy, it is worth while to insist on the ideal.

Statement and Proof. — We have seen (page 255) that every course of argument consists of two processes: (1) statement of facts, or exposition; and (2) inference from facts, or argument proper. Though these two processes are naturally intermingled, they must be distinguished. Moreover, statement of a set of facts without argument, statement confined strictly to exposition, is sometimes of distinct value to both speaker and hearer. There are cases in which we like to have before us whatever is admitted by both sides to be

fact, before we consider how each side uses these facts in argument. There are cases in which it is an advantage to prepare the way for our arguments by preliminary exposition. And even where this is unnecessary as a distinct part of the presentation, it is often profitable to the speaker himself as an exercise in discrimination. The ability to discriminate between statement and proof, between what is admitted and what must be argued, is directly cultivated by practice in writing such a statement of facts as will be admitted to be free from bias. Such practice, by clearing the ground, helps a debater to see the main issues. By putting aside what he may take for granted, he comes more squarely face to face with what he must establish and what he must overthrow.

As part of preparation for a debate on the justifiability of our war with Mexico, draw up a purely expository summary of important events before the formal declaration of hostilities. Include no event that is not accepted as a fact by two standard histories. Arrange this summary in the order of time. Mention two points on which authorities differ as to facts, or on which the facts are not surely known; and indicate as to each of these points which authority you decide to follow. Now analyze this material in a brief, without grouping in such a way as to argue.

In addition to the subjects suggested in the previous chapter, the following may be used for practice in preliminary statement of facts with a view to clearing the ground by making plain the main issue or issues.

1. General Gates should have been, as he was, put in supreme command of the American forces before the battle of Saratoga.
2. Washington should have pardoned Major André.
3. The execution of Mary Queen of Scots was justifiable.
4. High-school secret societies should be abolished.
5. The Fifteenth Amendment to the Constitution has been justified.
6. The United States Post Office should materially increase the weight-limit for merchandise, and decrease the rate.

The Three Main Ways of Arguing. — To show that elections to the United States Senate should be by direct popular vote, it may be argued:

1. from general principle, that our government is based on the idea of popular representation;

2. from facts, that the present indirect method of election keeps senators from being directly amenable to the will of the people of their states;

3. by comparison, that the British House of Lords shows the danger of a privileged body able to obstruct legislation demanded by a large majority of the people.

These are three fundamental ways of arguing. The first, arguing from general principles, is called *deduction*; the second, arguing from the facts under investigation, is called *induction*; the third, arguing from a parallel case outside, is called *analogy*. To apply these three ways on the other side of the same question, it may be argued:

1. by deduction from general principles, that the underlying ideas of our Constitution with regard to representation are (a) to represent the states as states, not merely the people as a whole, and (b) to maintain a system of checks and balances;

2. by induction from the facts under investigation, that the Senate has not shown itself less amenable than the House to the will of a majority of the nation;

3. by analogy of a parallel case outside, that the French Senate shows the value of a second chamber in a representative republican government.

Deduction. — All these three ways of arguing are so useful that, instead of troubling ourselves as to which is best, we should try to use all. It is well to cultivate all ways of arguing. But the three ways are not equally good for every case. Some propositions depend more on deduction because, the facts being imperfectly known or hard to find,

we are thrown back for our decision on the general principles or ideas under which we have come to group our previous knowledge. Other propositions depend more on induction because, the question being new, our previous ideas give us comparatively little guidance. As to analogy, though it may be used in almost any discussion, it is never sufficient by itself. So again, using all ways in a given discussion, we may use them at different stages of the preparation. Deduction, argument from previous ideas, is most useful in looking ahead, as we sit down to think. It helps us to question ourselves before we advance to another stage of reading (see page 230). Being argument from reflection, it is most useful as preliminary or preparatory. It forecasts the probabilities of the case. Consequently its besetting danger is prejudice. As we thus survey a question in advance by the light of our general ideas, we must not try to settle it in advance finally. We must not shut our eyes to other light. We must keep our minds open. With this caution, we may always profit by arguing deductively in advance and between the stages of research.

In form, deduction is somewhat like that method of paragraph development which begins with a statement of the paragraph subject as a general principle, and carries it out by iteration. Only, in deductive argument the general principle is not merely restated; it is proved.

The strictest form of deductive argument is always reducible to a *syllogism*. A syllogism, or deductive summary, is as follows:

Major Premise. All immigrants must be naturalized in order to vote.

Minor Premise. This immigrant has not been naturalized.

Conclusion. This immigrant cannot vote.

In ordinary conversation we say simply: *This immigrant cannot vote because he has not been naturalized.*

This is the form of argument followed in proving a proposition in geometry. The argument starts from a truth, already estab-

lished and accepted, called the *major premise*. It proceeds to prove that the particular proposition in question, the *minor premise*, comes within the scope of the major premise. The *conclusion* follows as a matter of course. A deductive argument is thus seen to consist of proving that the particular case in point comes under a general law. In this sense it argues from the general to the particular. In matters of ordinary debate we cannot establish a case entirely by deduction, for the simple reason that we cannot get an undisputed major premise. Otherwise the question would not be under discussion; it would no longer be a question, for it would be already settled. But we can strengthen a case deductively by arguing from principles which, if not accepted universally, are yet accepted very generally, and then go on to argue inductively also.

Moreover, though we cannot carry on a course of argument by syllogisms without becoming formal and tedious, we can apply the syllogism very effectively as a test. Whenever you are doubtful of a deductive argument, your own or your opponent's, sum it up in a syllogism. Then you can see what it amounts to. Then you can discover whether its major premise is really a generally accepted principle or merely a loose, popular notion; whether its minor premise really follows from the major premise or not.

Test the following by putting each into a syllogism:

1. Don't trust him. All Indians are tricky.
2. I vote against this bill for a National Health Bureau on the ground that the United States has no right to interfere with purely local affairs.
3. Cuba ought to be annexed to the United States because Spanish American peoples are incapable of stable self-government.
4. Employers ought to be liable for compensation to all employees injured in the course of employment, because such accidents are part of the inevitable risks of industry.
5. Queen Elizabeth's laws against Roman Catholics were wrong because they amounted to persecution.
6. I will not pay my fare unless you give me a seat.

Induction. — Induction goes the other way about. It

marshals the facts collected on the note-slips so as to make them establish conclusions. It groups facts to make proof. Here are two processes, both requiring care. First, the separate facts must be vouched for by good authority (page 234); secondly, the grouping of them must not be forced, but always so natural as to be readily accepted. To this latter end we must have facts enough to make any disputed conclusion clear, and we must be ready to explain any well-known facts that seem exceptions. In other words, we must beware of concluding hastily, and we must take due account of the other side. For instance, in reading about strikes we have found that in a street-railway strike at Waterbury, Conn., the strikers resorted to violence, that violence also occurred in the strike of steel-workers at Homestead, Pa., and again in a miners' strike in Colorado. If we conclude that *strikes always lead to violence*, our opponents will bring up at least as many instances to the contrary. For one of the greatest services of debate is to expose hasty inductions. The caution for inductive argument, then, is, Don't conclude hastily from a few facts. Consider the facts that make against your conclusion as well as the facts that make for it; and modify your conclusion accordingly. Word the argument under which you group your facts so carefully that no one can fairly object. When the family wash has been delayed by rain on three successive Mondays, don't say, It *always* rains on Monday. Don't jump at conclusions.

In form, inductive argument is somewhat like that method of paragraph development which supports the paragraph subject by instances. Only, in inductive argument, the instances must not merely show that the conclusion is sometimes true; they must establish a probability that it is true usually, as a matter of cause and effect. In using instances for this purpose, a very effective form of induction is to prove by absence as well as by presence.

We may try to show that the United States should retain control of Cuba by giving instances of prosperity under our control, such as increase of commerce, improvement of roads and schools, etc. If we can also show that these have declined when the United States withdrew, the inference of the advantage to Cuba of our control will be greatly strengthened.

Analogy. — Analogy is insufficient to establish proof by itself, because the single historical case on which the argument is based is likely to reveal some points of difference. In arguing that Cuba will gain more in the end by working out its own civilization independently than by being absorbed into the United States, the analogy may be used of the Germans in the days of Julius Cæsar. Though undoubtedly the Germans might have gained more in civilization at first by being absorbed, like the Gauls, into the Roman Empire, yet by keeping their independence they developed into one of the greatest peoples of history. This is an effective analogy. Yet an opponent would urge the racial differences between the Germans and the Cubans, and the differences of government between the Roman Empire and the United States. This does not mean that argument by analogy should be abandoned; it does mean that the analogy should be real and fundamental, not merely plausible, and further that analogy is best used, not as a main reliance, but in support of other forms of argument. Generally, deduction is most useful in preliminary survey; induction, for the main work of proof; analogy, to enliven the presentation. But analogy has the further use of enhancing and clarifying exposition. Thus it also strengthens argument indirectly by bringing the necessary explanation home. Burke makes good argumentative use of analogy in citing the case of Wales to prove the advisability of conciliation with America.

SUMMARY

1. *Deduction*: drawing down principles; arguing from reflection, or out of one's head; looking forward; arguing from general principles.

2. *Induction*: drawing up evidence; arguing from investigation, or out of books; looking backward; arguing from particular facts.

3. *Analogy*: drawing a parallel; arguing by comparison; arguing that the present is like the past in a particular aspect; arguing from history.

Speaking from Outline. — *Better than Reading or Memorizing.* — For any kind of speech, the final stage of preparation had better be by speaking. The plan by paragraphs once settled (page 261), that paragraph which promises to be easiest may be developed orally, spoken off consecutively from beginning to end. This first oral form, though it may be rough and halting, will show whether the discussion of that point is full enough to be clear and lively enough to be interesting. Better still, it will begin the habit of public speaking by giving the sense of actually addressing an audience. Imagine hearers before you. Try by all means to make the point clear. Exemplify, taking up a card now and then if there is need to cite authority; iterate and contrast, putting the idea in different ways until it must be clear; illustrate by some familiar and interesting parallel; and close by repeating the point emphatically.¹ Instead of stopping to choose words or correct sentences, speak straight on to the end, slowly, but without long pauses. Then, after thinking how to express the point more exactly or strongly, speak the whole paragraph a second time. In this way each paragraph may be developed orally in spare moments.

In addition, the whole speech should be spoken through

¹ For these means of paragraph development, see Part I., Chapter ii.

without interruption from beginning to end. This gives opportunity to make sure that the close is clear and strong; the opening, pointed and interesting. At this point some speakers enlarge the paragraph outline by writing out the beginning and the end of each paragraph, to make the coherence of the whole sure by paragraph emphasis.¹ Serviceable for beginners, such revision is by no means necessary in all cases. The essential method is to prepare the speech by speaking. The result is that the speaker is ready, positively because he knows exactly what he is to say, negatively because he is not bound to recall it in certain fixed words. For by the method of oral development, though no paragraph will be said twice in exactly the same words, the whole will be at command. The important words will be readily remembered; and, what is of greater consequence, the speaker will be free to look his audience in the eye, confident of each thought, and of its place and method of development, and ready to adapt his words as he sees opportunity. The way to learn to speak is by speaking.

It is not by writing. To write a speech out in full *after* it has been prepared orally is excellent practice in revision; to write it out in full *before* it is spoken will probably condemn the writer either to read it aloud or to learn it by heart. Neither reading nor memorizing gives much practice in public speaking. Neither develops the real power of the platform, the power to appeal to an audience directly. In reading aloud, the manuscript seems to come between speaker and hearers, and often gives an impression of unreality, as if the words were those of a third person. In speaking from memory, the necessity of recalling the exact words distracts the speaker's attention from his hearers. He is not directly pleading with them; he is reciting to them; and they quickly feel the difference. It distracts his atten-

¹ Part I., Chapter iv. 4.

tion also from his own thoughts and feelings; for these he is no longer uttering spontaneously, but recalling in certain fixed expressions. No student will gain much power in public speaking so long as he confines himself to writing.

Insures Adaptation and Emphasis. — The preparation of a speech by speaking it several times from a paragraph outline has other marked advantages. At the very first trial it gives confidence by accustoming the speaker to the sound of his own voice. It takes off the edge of his first stage fright. Secondly, it teaches adaptation to the audience. Phrases that look well enough on paper often sound inappropriate or insincere when they are uttered. Speaking in preparation leads the speaker to adopt such language as he can put his heart into. Thirdly, it reveals the importance of paragraph emphasis as a means of making the whole coherent. This is much more important for speaking than for writing; and its importance is revealed by the act of speaking. As he speaks, one feels that he must not leave a point until he has clinched it; he feels that before passing to the next paragraph he must make his hearers quite sure of the paragraph that he is finishing.

Insures Due Amplification. — Again, the oral development of a paragraph leads naturally to greater fullness. A statement that might suffice for reading may be too bare for hearing. Feeling this lack as he speaks, one naturally tends to iterate more, or to use more examples and illustrations. Speech must be fuller than writing. The very process of speaking may reveal the advantage of omitting some points of the original plan for the sake of expanding others. Here is a direct gain. A speech prevails, not by numbers, but by fullness. The idea of covering many points is often misleading. A speaker really covers no more points than he can make his hearers cover. He gains nothing by hurrying them over others. *Not many, but much,* is the

motto for speech-making. Better a few points impressed than many points hurried. An audience cannot hurry. To digest a point from hearing takes time. Preparation by speaking leads to due amplification.

Insures Freedom and Spontaneity. — But perhaps the greatest advantage of oral preparation has been mentioned already. It is freedom. "He is not tied down to his notes" is often said in praise of a speaker, and justly. When is a man tied down to his notes, and when not? Notes are usually necessary. The only question is how to use them. If the speaker has not merely arranged his notes and made a plan by paragraphs, but also written out his speech in full before speaking it at all, then he must remember certain words or falter. They may be very good words; but, instead of helping him, they hinder. They divide his attention. He is compelled to think of two things at once, what he is saying and how he is saying it. He runs the risk of seeming to recite words instead of urging things. If, as he looks at his hearers, he feels that one of his phrases is inappropriate, or if his opponent in debate has taken an unexpected turn, he cannot change that part for fear of breaking his thread of memory. If he forgets a word, he is confused and halted. But if he has composed his speech orally from outline, he is quite free to adapt. The outline being easily remembered if it be short, or held in the hand if it be long, he is confident. He cannot lose his way; and in speech-making that is the only real danger. To lose a word is nothing. As a matter of fact, a speaker usually remembers the words most important to remember, the key-words or clue-words. These become fixed in his mind by recurring in the oral preparation. But, even if the word escapes, the idea remains and will suggest another word. Thus being free from bondage to words, he develops a thought or a feeling with the force of real discussion, man to man. Look-

ing his hearers in the eye — the speaker from memory is often afraid to do that — he makes his point sure. If he sees that it is not quite grasped, he iterates; if he finds his way of talking too dry, or too solemn, or too anything else, he changes his style. For oral preparation gives a speaker freedom by giving him flexibility. He is free to adapt. He can expand or contract or modify without faltering. His speech is not cut and dried. It keeps its freshness. True, not all these desirable qualities will be achieved at once or without pains; but the point is, how shall our pains be spent? Preparation and practice are necessary either way. To develop skill in public speaking, let the preparation and practice be largely oral.

Debate. — *The Spirit of Debate.* *Reality.* — The power of such direct, free speech is seen best in debate. The idea of debate is to make the truth prevail over opposition. To the audience it gives the opportunity of understanding a disputed matter fully by hearing both sides. Among all civilized peoples this is a recognized way of settling public questions. To the debater it gives the opportunity of fighting for his beliefs. In order to make his proposal prevail, he has to test both his own reasons and those of his opponents. Thus debate has a constant twofold value: it informs the audience in the liveliest possible way on matters in which they are concerned; and it develops in speakers a habit of clear and thorough thinking, careful investigation and forcible presentation. Loose thinking, lazy study, halting presentation, cannot withstand attack. Debate puts a man on his mettle. He has to know his reasons and find ways of recommending them. Fortifying his convictions, he learns how to make others at least respect them, and, if he succeeds further, adopt them. Thus, of all kinds of public speaking, it calls most for thoroughness, directness, and practical adaptation. It is composition at close quarters.

So the ideal debate is on a question really important to the audience, and by speakers really convinced of the side for which they speak. Then audience and speakers alike have the greatest zest possible to any form of composition, — eagerness for the outcome. Though these conditions are not possible always, they should always be sought, and they can be attained very often. First, the question should be of real interest. It need not be a burning issue; it need not be new; but it should have real interest for the debaters and the audience. Nothing takes more life out of debate than unreality. To fence with words over a matter that no one cares about, or without any audience to care, is uphill work. It may give a certain sort of practice; but at least as much practice can be had from live questions. What questions are alive depends on the community. Every large group of people, every town, every high school, every society of more than a few members, buzzes with discussions. Whether these are on political questions suggested by the newspapers, or on questions of history suggested by books, or on town questions about a hospital or as to the number of saloons, or on school questions, they are alive if people care to talk and hear about them.

A little forethought can almost always put before the debating society a proposition that frames a live question. But there is need of a few cautions. Avoid questions of religion. Experience shows that these usually gain little, and may lose much, by public debate. Avoid questions of taste or individual opinion. *Thackeray is a greater author than Dickens* — as to this and like questions no general agreement is possible. They are subjects rather for conversation than for debate. Avoid questions that involve difficult or complicated research. These compel a young debater either to hesitate from uncertain knowledge or to put on pedantic airs. Finally, be ready sometimes to speak on the side contrary to your convictions. This does, indeed, involve unreal-

ity; but it is sometimes necessary, as when most of the debaters favor one side; and it gives valuable additional practice. Every debate necessitates study of the other side. To speak also for the other side increases one's ability to see both sides, and it weakens a habit of prejudice. Nor does it impair loyalty. Every one understands that a debater must sometimes be on the "wrong" side. By doing his best for it he forces his opponents to defend his real convictions well. As to many questions proposed a debater will have no strong preference of side. His mind will be made up by the debate, not beforehand. When the proposition frames a matter of his conviction, he should always speak for that conviction if possible. Only by putting his heart in can he do his best. But if the other side lacks a man, he need not hesitate to be what the middle ages called the devil's advocate. For even by this means he can show the defenders of his belief what they have to overcome.

Courtesy. — The manners of all public debate are the manners of Congress. A debater always first addresses the chair. He refers to his opponents only in the third person: "The speaker who has just taken his seat contended," "as the affirmative has asserted," "the second speaker for the negative," "our opponents," etc. He avoids all language that might seem to impute unworthy motives. He challenges a statement, not as "false" or "untrue," but as "mistaken," "unfounded," "unwarranted," etc. He faces, not his opponents, except rarely to put a question, but the audience. These are the courtesies of debate. Even in small companies they should not be thought irksome; for without such restraint debate easily lapses into mere wrangling. A debate implies that certain disputants have agreed to hear one another out fully, in turn, without interruption, and to leave the decision to a third party. Debate ought to be always earnest and never angry. Quarreling spoils the debate and affronts the audience. Without learning to give and take courteously, no one can learn to

debate at all. To lose one's temper is often to lose one's case. The formal courtesies of debate merely embody this vital principle of restraint. They safeguard the high value of debate by keeping it on a high plane. By prohibiting personalities they not only prevent quarreling; they also direct attention from the speakers to their arguments. They remind us that the object of attack is not the man, but the thing. They bid us rebut, not men, but arguments. They imply that the truth is more important than any man. The desire to display oneself, or to humble an opponent, should be sacrificed to the single aim of advancing one's cause. Thus the courtesies of debate will help the realization of its very object.

Honesty. — Honesty, being assumed as necessary to all public dealings, might seem hardly worth a pause, were it not obscured sometimes by the idea of cleverness. Many thoughtless people see in debate little more than an exhibition of sharp practice, evasion, twisting of words and juggling with facts. And some debaters seem to be more occupied with laying snares for their opponents, or with wriggling out of an issue, than with discussing squarely. They seem less anxious for a battle than for an ambush. Now the old maxim that honesty is the best policy is nowhere stronger than in debate. This does not mean that debaters must always disclose their whole case at the start; for their opponents may fairly be kept alert, and unexpected turns are a fair test of strength. It does not mean that debaters should not expose to the full an adversary's omissions, inconsistencies, or hasty inferences; for the exposure of error directly advances truth, and the very life of debate depends on making one's own side strong against the other. Truth will be best served in the end by each debater's doing his very best for his own side. A debater is responsible, not for the decision, which belongs to the

judges, but for the strength of his own case. But honesty in debate does mean a purpose to meet fairly all issues fairly involved in the question. If a point advantageous to your opponents is not brought up by them, you are under no obligation to mention it. That is their lookout. Your duty is to your own side. But in preparation study, not how to evade your opponents' points by some twisting of the proposition, not how to meet them falsely by statistics that you know to be doubtful or insufficient, but how to meet them squarely. In preparation, again, study, not how much can possibly be admitted in a statement of facts by some ingenious interpretation, or some bias suspected in the audience or the judges, but how much should be admitted by an impartial student. Trickery is poor debate. It usually rebounds upon the tricksters; for their opponents will probably expose it, and it may even dim the value of their sound arguments by casting suspicion on their whole case. A spirit of fairness is of itself a recommendation. Trickery, even when it succeeds at the time, fails in the end. It fails by missing the larger and more important training of debate; and it tends to paralyze debate in that community by cutting a nerve.

The Method of Debate: Rebuttal. — The peculiarity of debate, as distinguished from other forms of public speaking, is give-and-take. Debate has to be adapted, not merely, as all speaking must be adapted, to the audience, but also to opponents. Therefore it must be of all forms of public speaking the most flexible. The debater must have a two-fold readiness: (1) readiness to advance his case positively by urging those arguments for it which are his part; (2) readiness to advance his case negatively by meeting those arguments against it which have been urged by his opponents. The former demands in general merely the same preparation as for any other form of public speaking. In

particular it demands some leeway. Instead of planning for the whole time assigned, the debater leaves a margin for answering his opponents. Though a second speech is often provided for each speaker to this particular end, still he had better leave room for it also in his first speech. Thus the debate will be a debate throughout, and not in great part a series of set speeches.

Grouping Rebuttal. — The latter kind of readiness is the readiness peculiar to debate. The life of debate is rebuttal. Preparation for rebuttal has been made already by the brief; for this not only includes answers to the probable attacks of the other side, but also shows the bearing of these answers on the whole case (page 244). Rebuttal, to be effective, must be more than a number of separate answers to a number of separate objections. Like the positive arguments, it needs to be grouped under main points. Thus the brief is most useful for reference in showing what a set of objections amounts to as a whole. By its aid a debater can more quickly group his rebuttal so as to show that the attack has left his case strong. Such readiness makes the rebuttal tell as a whole, not merely as a number of answers. Readiness to rebut consists, not merely in having many answers to many separate small points, but in knowing how to group these effectively.

Closing Positively. — For the same reason rebuttal should always close positively by showing that one's own side remains strong. Thus it should seize any good opportunity of reviewing briefly the whole course of the debate, so as to show how attack has been resisted, or where it has been weak, and to expose any weakness of positive argument on the other side as a whole. In a word, rebuttal is not confined to details. It may well consider also the whole course of the argument. And this it must do in the final speech of rebuttal that closes the whole debate. For the close of

a debate, like the close of any other composition, must be strong and positive.

"How Do You Know?" and "What of It?" — In detail the preparation for rebuttal is a process of analysis. It analyzes the argument of the opposition to see (1) what it is based on, and (2) what it amounts to. Rebuttal, that is, challenges an argument by asking either (1) *How do you know?* or (2) *What of it?* In other words, it challenges either (1) the evidence, the basis of facts, or (2) the inference, the conclusion drawn from the facts. In one way or the other, sometimes in both, rebuttal analyzes an argument to test its worth.

Cuba should be annexed to the United States. In support of this proposition it is asserted that the Cubans are too illiterate for stable self-government. How do you know? Show us by authoritative statistics that the percentage of illiteracy among the Cubans is higher than among peoples having a stable self-government. Rebuttal never lets pass a general assertion; it always pins down to particulars, and to particulars well vouched. And what of it? Supposing a high percentage of illiteracy to be established, does that prove the advantage of annexation? Will Cuba lose or gain in the end by dealing with her own problem of illiteracy? Shall we lose or gain by annexing an illiterate population? *Subsidies should be granted to United States vessels engaged in trade with South America.* In support of this proposition it is argued that transportation between the United States and South America is deficient. How do you know? From a senator's speech reported in a newspaper. But the number of sailings entered in the last report of the Commissioner of Navigation is 600; and the Commissioner's figures are superior as evidence to the senator's general assertion. And what of it? Suppose the number of sailings to be smaller than is desirable. Would increasing the number of ships be the best way of increasing the trade? Do ships produce trade; or does trade produce ships?

How do you know? What of it? These questions in-

dicare, not the actual words to be used in rebuttal, but the method of analysis. They mean that analysis for rebuttal must scrutinize both the evidence and the inference; that we must examine whether the facts are accurately stated and sufficient, and whether the reasoning from them is sound. As every argument consists of statement and proof (page 265), so rebuttal must analyze both.

Listening. — Rebuttal, like all other argument in debate, should be real. It should meet the points that actually arise, not merely those that might arise. Preparation for debate must, indeed, forecast what the opponents will probably bring forward; but it can rarely forecast exactly what will be the opponents' line. The debater must be ready for anything that may reasonably arise; but he must actually meet what actually does arise. Else debate becomes a series of set speeches. It ceases to be a combat. Skill in rebuttal comes largely from meeting opportunities. To this end the first means is a habit of listening. A good debater is a good listener. He is quick to seize what his opponent says — not the ten or dozen things that he says, but the single thing, or the few things, in which they may be all summed up (page 281). He learns to analyze and summarize as he hears. Now if, on the contrary, he is absorbed in what he proposed to say himself, or if the first point made by his opponent sets him to running nervously over his notes, he is likely to lose his chance. The only way to meet the actual opportunities of debate is to listen, to listen intently, to seize the main point, and then to attack that.

This does not involve abandoning one's main line of argument. If that has been well considered, it will remain good. But no line of argument should be planned to fill the whole time. Space should be left for adjusting the incidental rebuttal according to the actual turn of the debate,

and for expanding the positive argument where it is most heavily attacked. Far from abandoning his main line, a debater should never let himself be drawn aside; but to turn aside is very different from turning to meet an important argument. For any important argument in a well-prepared debate can always be brought to bear on one's own case. Such adjustment demands alertness; and alertness begins in cultivating a habit of listening. Only by listening can a debater learn to measure quickly which arguments demand most attention, and how to rebut them so as to show their relation to his own positive argument.¹

Working Together. — Debate combines into one effective whole, not merely many arguments, but several persons. Its success depends less on brilliant individual speeches than on the working together of all. It prevails by combination. "My colleague has shown you" — "We have insisted throughout this debate" — words like these are not merely formal; they remind us that a debate must hang together. Division of labor should lighten research by making each debater responsible for one main group of arguments and the facts on which they are based. And in rebuttal each debater may well take care of those points which fall within his own field. But the case as a whole should be planned by all and familiar to each in its main bearings. Thus any speaker can briefly rebut an argument which will be met in detail by his colleague who has that group in charge, but which seems to demand some answer at once. Each debater, regarding himself as a part, should be ready to do whatever the debate needs. Though he may foresee a chance for eloquence on a certain point, he must not hesitate, if that point is slighted, to touch it lightly for the sake of spending himself where he is needed. Each debater should make his own points sure, and still be ready to help

¹ See Part I., Chapter ii., pages 75, 90.

the others if the main attack falls on them. Thus debate has the force and the pleasure of fellowship in contest.

Speeches on Occasions. — *Distinct from Speeches in Debate.*
— Public speaking is of three general kinds, according as it is directed toward the past, the future, or the present. The first kind, looking at the past, is *forensic* oratory, the oratory of lawyers in court. Its object is to determine in a dispute just what happened, and whether it was right or wrong according to the law. The second kind, looking at the future, is *deliberative* oratory, the oratory of Congress and of all other public discussion. Its object is to determine in a dispute just what ought to be done; *i.e.*, whether a proposed measure is wise or unwise, expedient or inexpedient. The third kind, *occasional* oratory, looking at the present, seeks to make an audience realize the significance of an occasion. The first kind is too technical for consideration here. The second has been discussed already under the head of debate. We must now consider the third, speeches on occasions.

Perhaps the instances of this most familiar to Americans are Webster's first oration at Bunker Hill, and Lincoln's at the dedication of the cemetery at Gettysburg. At once we recognize in these speeches a distinct kind of public speaking. The object is not so much to prove or to explain as to interpret. The speaker tries not so much to make us understand as to make us feel. His aim is to bring some event home, to mark some anniversary or other public commemoration upon our hearts, to improve, as the good old-fashioned phrase puts it, — to improve the occasion. It has long been our American habit to observe occasions in this way. The annual Fourth-of-July oration, indeed, has given way to noisier demonstrations; but the birthdays of Washington and of Lincoln, Memorial Day, Thanksgiving Day among Americans abroad, and other public holidays,

are still annually commemorated by speeches. The unveiling of a tablet, the completion of a monument, the presentation of a stand of colors or a loving-cup, school or college "commencements," are usually marked in the same way. The public dinners of a society would be otherwise incomplete. Many sermons are occasional speeches. In short, there are few days on which the newspaper does not report some speech on an occasion; and among such speeches we find some of the best oratory of any period.

The Opportunity for Originality. — The fact that occasional speeches are often the best speeches of the best speakers seems at first to put them quite out of ordinary reach; and indeed it would be fatuous for an inexperienced speaker to put himself forward on a great occasion. On such occasions most of us had better listen. Nevertheless, there are occasions also for students, and they offer opportunities for exercising oneself in ways not offered by debate. Graduation invites speeches, not only by distinguished visitors, but also by the graduates. Some message they too have for that day; and sometimes they may bring it home the better because they speak to their own classmates. Nor is there any presumption in putting before one's classmates or society some significance felt in Memorial Day or on a lesser occasion of general or local commemoration.

How can an occasional speech be original? Evidently not by conveying new information. That would usually be impossible for a speaker of any age; for the occasion is usually old enough, either the anniversary of an event often commemorated, or similar to a hundred other occasions. Every Commencement, for instance, is much like every other Commencement. But every audience is somewhat different from every other audience; every community has some interests peculiar to itself or to the time of speaking;

and every speaker sees through his own eyes. There is the chance for originality. The subject may be old; but it has never before been presented to those people by that speaker, and this year gives it a significance unthought of last year.

The Need of Bringing Home. — Such occasional speeches are quite possible, and are very valuable training in adaptation. Especial attention should be given to the tone, or manner; for the chief merit of an occasional speech is appropriateness. Keeping a clear progress of thought, avoid dividing the speech in the formal manner proper to debate. The commemoration of a great man should never be a chronological summary of his life. Besides being tedious, that is too much like reciting from the cyclopedia. Select such aspects of his character and career as appeal most to you and promise to touch the audience at that particular time. Occasional speeches give an opportunity, impossible in debate, for description. There is no better way of impressing the democratic spirit of Lincoln, for instance, than by describing certain incidents. The younger the audience, the more room for description. The constant aim of an occasional speech is to rekindle interest in the subject by adapting it to the audience and the time. Its originality consists in a message felt by the speaker and brought home to the hearers.

For instance, a student speaker on Memorial Day does well to remember that three of his classmates have grandfathers who fought in the Civil War, two on the Union side, one for the Confederacy. Two years ago the school cadets marched with wreaths for the graves. Last year there was no observance at all. Everybody went to the base-ball game, and spent the rest of the day in the woods. This year about half object to any public exercises. They say, "What do we care about the war?" Make that, then, the theme, — *What do we care about the war?*

Or suppose the president of the athletic association is chosen to present, on behalf of the school, a silver cup to the public-spirited citizen who gave three acres for a school athletic field. The speaker wishes above all to say something natural to himself and agreeable to a benefactor who hates fulsome praise in public. The donor ought to know that the success of the past season has been due directly to the superior opportunities for practice. The whole town ought to know how much the field is used, not only by the team, but by the school as a whole. It has done most good to the poorer boys, who have no other good place to play in. The aldermen are talking of opening a similar field next to the South Side Park for the other high school; but some people are growling about taxes. The same benefactor is interested in that too. Perhaps it will be helped by what can be shown concerning this field. At any rate, the main thing is to make Mr. B. . . . feel that the students have made good use of his gift, and thank him with all their hearts. A good close would be a call for three cheers.

In such simple ways even a young speaker can bring an occasional speech home by adaptation to his audience.

SUGGESTIONS FOR OCCASIONAL SPEECHES

1. ARBOR DAY

Occasion. At the tree-planting you are chosen to speak on the significance of this anniversary.

Theme. Every citizen should do his part in preserving and developing the nation's resources.

Paragraphs:— I. Show the original wilderness wealth of this country by picturing the scene of the tree-planting as it must have looked a hundred and fifty years ago. Wasteful methods, inculcated by the necessity, in the early days, of clearing land, have lasted down to our own day. Show how our forests are wasted, and describe a scene of wasting.

II. Show how we all lose by this waste. Increased cost of building and fuel means increased rent, etc. Damage by freshets and loss from idle or ruined land, etc. (describe), increase the price of remaining land, taxation, etc.

III. Arbor Day is a national protest against this waste. Show what the national government (Forest Service) is doing to make trees, as well as wheat and corn, add to the public wealth. We must use, not abuse.

IV. Our share in this great work is to make our generation understand its importance, to increase public sentiment. Our tree-planting is a symbol. We are the citizens of to-morrow.

2. THE OPENING OF THE NEW PUBLIC LIBRARY

Occasion. You are chosen to address the class on the completion of the new public library.

Theme: What the new library means to us.

Paragraphs—I. The Occasion: significance of the new building as marking the public spirit of the community (or the generosity of a donor); beauty and convenience of the building.

II. The Library as a Community Center: equal opportunity for all, irrespective of income, race, or creed; instances of value to foreign immigrants, to the "grange" or other local society, to courses of lectures, or to other local uses.

III. The Library for General Education or Culture: broadening influence of comparative study (Adapt pages 222-227 to your own locality).

IV. The Library for Education in a Trade. Rising in the world, which is the natural ambition of every American, depends on broadening one's outlook and increasing one's special knowledge; *e.g.*, the library gives opportunities to study designing for textiles, or the strength of modern building materials (reinforced concrete). Choose instances appropriate to the community.

V. The Library for Education in Politics. Demagogues and partisans of wild schemes can get little hold on a man who reads for himself. Our government draws its strength from the educated intelligence of its citizens.

3. THE READING OF ROMANCE

Occasion. The class having just finished the study of *Ivanhoe*, you are chosen to speak on the value of such reading in education.

Theme. Romances of chivalry are worth the study of young Americans to-day.

Paragraphs: — I. *Ivanhoe* is typical of class of stories dealing with "old, forgotten, far-off things and battles long ago." Give other instances, and describe typical scenes.

II. Many people have no taste for such reading, because it is not practical. Show wherein it is not practical. How much of our school study is practical in the sense of bearing directly on the business of life? What is the rest for? Contrast these two fields of study.

III. Stories, being primarily for pleasure, belong mainly to "outside" or leisure reading. Such reading may be merely lazy; but it need not be. Many stories have a direct bearing on conduct; *e.g.*, stories of "real life." Give instances. But romances do not deal with real life. They show us not so much what men and women are as what they wish to be. They "take us out of ourselves."

IV. Thus the value of romance is in making us love noble ideals. Give instances of the chivalrous ideals of romance: generosity, bravery, courtesy, devotion to a cause or a person. Show the value of such ideals in our actual modern life.

4. A PRESENTATION

Occasion. The graduating class, having bought by subscription a picture (or other decoration) for the assembly hall, has commissioned you to present it at Commencement. All the students will be assembled, and the principal is to receive the gift on behalf of the school.

Paragraphs: — I. (addressed to the audience). No class can leave this school without feeling that it owes much to the whole community. We understand that this education is the free gift of all the citizens, and that we can best repay them by using it for good citizenship ourselves. Public education is a public trust.

II. Our loyalty to the school itself we wish to acknowledge by doing something, as preceding classes have done, to enhance its attractiveness. It means much to be surrounded during four

years of study by such objects as appeal to higher thoughts. Such objects in a building devoted to public education bring inspiration to all alike. Everybody recognizes this to-day. Schoolrooms are no longer expected to be bare and cheerless. We hope to add our little to the happiness of school life for those who follow us.

III. (addressed to the principal). So we beg you, sir, to accept this We have chosen it because (comment on the subject and its appropriateness). It expresses also our thanks to you and to the teachers for what they have given us (mention any particular obligations). We know that you will feel yourselves best rewarded by seeing that we too care for the cause to which you have given your lives.

IV. (addressed to the school). Our farewell word is that every student owes it to this school to do something for the school. We can make this merely a place in which to recite lessons, or a training place for common endeavor. The class of . . . has tried to do something for school spirit. Several good things need to be carried forward, and some other good things to be started, by working together (Mention particular enterprises). We appeal to your loyalty.

5. RECLAIMING BOYS FOR CITIZENSHIP

Occasion. You are appointed to address the class (or the school) on the George Junior Republic.

Theme. A system of self-government has succeeded in making good citizens out of "hoodlums."

Paragraphs: — I. One of the most serious social problems to-day concerns wayward boys in cities. Describe the life of young marauders — damage to property and other petty crimes. More dangerous is the education in lawlessness. These boys, to whom every policeman is an enemy, are our future voters.

II. The boys not altogether to blame: irksome restrictions of city life, no room for free play, lack of good home influences. Describe the day and night of a poor boy in a great city. Mr. George's notion is that a boy with wit and energy enough to be bad has energy enough to be good; *i.e.*, that he is simply perverted.

III. The public remedy of reform schools and houses of correction fails (a) by being applied after the boy has already become a criminal, and (b) by herding him with other criminals under the repression of prison discipline. Boys often come out of reform schools worse than they went in.

IV. Mr. George's first experiment was to give the bad street-boy room by taking him into the country. Compare the value of "fresh-air" expeditions. Describe the country at Freeville, N. Y., Mr. George's colony. The moral value of abundant and healthful physical exercise.

V. This solution proving insufficient, Mr. George then organized by degrees a complete system of self-government, on the theory that what such boys need most to learn is responsibility to the community. Thus law is found to be, not arbitrary repression from above, but sacrifice by the individual for the good of all. His first application of this was in establishing the rule that every member of the community must pay for the benefits of the community by work. The boys, soon finding that idlers were a burden, very effectually made everybody work.

VI. The system has been worked out in every detail of a self-governing democracy, legislation, judiciary, police, banking and currency, etc., all conducted by the boys themselves. Describe in detail, and tell stories of particular cases.

VII. The results have been successful almost without exception. Describe and conclude.

6. THE PANAMA CANAL

Occasion. You are appointed to put before the class in current events the significance of the canal; size and cost, engineering difficulties, advantages to the United States and to the world. Similar occasions may call for speeches on *What Alaska is Worth to Us*, *The Hague Tribunal*, *The New Japan*, etc.

7. THE NEW PARK

Occasion. A new city park having been opened to the public, you are asked to speak on the gain to the community. Show

the reasons for maintaining public parks at the public expense, and especially for beautifying them by statues and landscape gardening; the advantage of this particular location in accessibility and resources. A similar occasion is the opening of *New Public Baths*.

8. THE FOURTH OF JULY

Occasion. The newspapers having discussed municipal restriction of the use of explosives on the national holiday, you are asked to discuss the reasons for this and to suggest what would be for the whole community the ideal celebration of the day. Speak briefly of what the Fourth means and what it ought to mean. Compare the usual practice to-day with that of our grandfathers and that of some other country on its national holiday. Parades, speeches, illumination and fireworks, noise, — to which should we give prominence? The speech will be partly argumentative; but its main aim should be to influence the sentiment of people of your own age by directing their feelings of patriotism and of holiday toward greater enjoyment for all.

9. THE PUBLIC HIGH SCHOOL AS A TRAINING IN DEMOCRACY

Occasion. Graduation from the high school.

10. ITALIANS AS AMERICANS

Occasion. The Italians of the city having placed a statue of Columbus in one of the public squares, you are asked to express the significance of this action.

11. THE OUT-OF-DOOR CURE

Occasion. An exhibition being held in one of the public buildings to show the best methods of preventing and checking the "great white plague," you are asked to explain the idea and details of these methods, and their importance to the community.

12. LEXINGTON DAY

Occasion. The anniversary of the battle of Lexington.

Theme. A few brave men, fighting for their convictions, turned the course of history for generations.

Describe the boulder on Lexington green, and its inscription, showing why Captain Parker's words were memorable. Picture the scene on that day. Show the immediate effects on the colonies, and the Lexington spirit in later events of the Revolution. Set forth the Lexington spirit fully with illustrations. Apply it to our own time.

13. LONGFELLOW AS A POET OF AMERICA

Occasion. The commemoration of Longfellow's birthday by a class in literature.

Paragraphs: — I. Though Longfellow's subjects range widely in time and place, most of his popular poems deal with America; *Hiawatha* with the aborigines: *Evangeline* and *Miles Standish* with the colonial period, etc.

II. His deep patriotism, felt in many poems, finds most popular expression in the *Launching of the Ship*.

III. He expresses no less effectively than Whittier the inheritance of our country from England through New England; but this does not make his poetry provincial. His statue in Westminster Abbey reminds us of his popularity among our kin beyond sea.

IV. He expresses often, and in many beautiful ways, our American spirit of cheerful courage and confidence.

14. NATHAN HALE

Occasion. The dedication of a statue; *theme*, "My only regret is that I have but one life to give for my country."

15. MARQUETTE

Occasion. The dedication of a statue; *theme*, (1) the success of a life that seemed to fail, or (2) what we owe to the French missionary explorers.

Revision of Speeches. — *Paragraph Emphasis.* — Revision should not be attempted to any great extent while one is actually speaking (page 272 above). Better keep thoughts and words moving together than interrupt the thought to

change the words. But when the whole has once been spoken, there is profit in writing out certain parts to put them in just the right way, and sometimes in writing out the whole to smooth transitions. The great lesson of form in public speaking is paragraph emphasis. Therefore the first task of revision is to make each paragraph close so firmly that its point is unmistakable for itself and in its relation to the whole course of the speech. This done, the beginning of each paragraph may readily be so worded as to show the connection between the new point and the old. A normal paragraph (1) begins with a link, some connective word, phrase, or sentence showing its relation to the paragraph preceding, (2) then announces its subject, (3) then develops its subject, and finally (4) emphasizes its subject by iteration, summary, or application at the end. The link may be long or short according to the importance of marking the connection at that point. Sometimes the connection is so obvious that it may be expressed by a mere conjunction or demonstrative (*this, thus, here, etc.*). Oftener a careful writer will establish connection by repeating some words emphasized at the close of the preceding paragraph. This is the surest means of marking the progress of thought from stage to stage. Part I., Chapter iv., which expounds paragraph method in detail, is summarized at page 263 above. The following additional analyses will make clearer how to adjust each paragraph to its place by revising its ending for emphasis and its beginning for transition. Though the body of each paragraph analyzed below, the development of the subject, is omitted, yet the progress of thought is clear from the adjustment of the beginning and the ending; the design is evident from the framework. The first extract is an argument; the second, an occasional speech; the third, an essay. Analysis of this sort may profitably be extended to other pieces that show the force of sequence.

(a) BURKE: CONCILIATION WITH AMERICA (Seven paragraphs from the Statement of Facts)

Paragraph Subject

The colonies are important by the very number of their inhabitants.

(*Link and announcement of subject.*)
The first thing that we have to consider with relation to the nature of the object is the number of people in the colonies

(*Emphatic paragraph close, iterating the point.*) Your children do not grow faster from infancy to manhood than they spread from families to communities, and from villages to nations.

This consideration alone would demand large and careful plans of government.

(*Link.*) I put this consideration of the present and the growing numbers in the front of our deliberation, because, Sir, this consideration will make it evident to a blunter discernment than yours that (*Announcement of subject*) no partial, narrow, contracted, pinched, occasional system will be at all suitable to such an object

(*Paragraph close, emphasizing the point by iteration*) you ought not, in reason, to trifle with so large a mass of the interests and feelings of the human race. You could at no time do so without guilt; and be assured you will not be able to do it long with impunity.

Great as is the population, the commerce is proportionally far greater.

(*Link.*) But the population of this country, the great and growing population, though a very important consideration, will lose much of its weight

if not combined with other circumstances. (*Announcement of subject.*) The commerce of your colonies is out of all proportion beyond the numbers of the people.

(*Paragraph close.*) There is, if I mistake not, a point of view from whence, if you will look at this subject, it is impossible that it should not make an impression upon you.

(*Paragraphs of statistics are omitted here.*)

The conclusion from statistics is that, while our whole commerce has increased, the proportion of America has advanced from one twelfth to one third.

(*Link by summary of the preceding statistics.*) The trade with America alone is now within less than £500,000 of being equal to what this great commercial nation, England, carried on at the beginning of this century with the whole world!

(*Paragraph close, emphasized by application.*) This is the relative proportion of the importance of the colonies at these two periods; and all reasoning concerning our mode of treating them must have this proportion as its basis, or it is a reasoning weak, rotten, and sophistical.

This enormous expansion has come about within a single life-time.

(*Long link, transition delayed for iteration.*) Mr. Speaker, I cannot prevail on myself to hurry over this great consideration. It is good for us to be here. We stand where we have an immense view of what is, and what is

past. Clouds, indeed, and darkness rest upon the future. Let us, however, before we descend from this noble eminence, reflect that this growth of our national prosperity has happened within the short period of the life of man. It has happened within sixty-eight years. There are those alive whose memory might touch the two extremities. (*Announcement of subject.*) For instance, my Lord Bathurst might remember all the stages of the progress

(*Paragraph close, emphasized by iteration and application.*) Fortunate man, he has lived to see it! Fortunate, indeed, if he lives to see nothing that shall vary the prospect, and cloud the setting of his day!

In the same period the exports to Pennsylvania increased nearly fifty-fold.

(*Formal link.*) Excuse me, Sir, if, turning from such thoughts, I resume this comparative view once more. You have seen it on a large scale; look at it on a small one. (*Announcement of subject.*) I will point out to your attention a particular instance of it in the single Province of Pennsylvania.

.

 (*Paragraph close, iteration of the particular point, then of the general point, this last printed as a separate paragraph.*) . . . the export to Pennsylvania . . . nearly equal to the export to all the colonies together in the

first period. I choose, Sir, to enter into these minute and particular details because generalities, which in all other cases are apt to heighten and raise the subject, have here a tendency to sink it. When we speak of the commerce with our colonies, fiction lags after truth, invention is unfruitful, and imagination cold and barren.

(Two paragraphs omitted, on imports and on agriculture.)

The fisheries of the colonies are unparalleled in extent and spirit.

(Announcement of subject) . . .
wealth . . . from fisheries . . . fully
opened at your bar . . . seemed to
excite your envy . . . ought to have
. . . raised your esteem. . . .
.

(Paragraph close, emphasis by iteration and comparison.) Neither the perseverance of Holland, nor the activity of France, nor the dextrous and firm sagacity of English enterprise, ever carried this most perilous mode of hardy industry to the extent to which it has been pushed by this recent people, — a people who are still, as it were, but in the gristle, and not yet hardened into the bone of manhood.

(The paragraph immediately following in Burke's speech is devoted entirely to iterating and applying the point of the whole section. Such a paragraph of iteration occurs again after the enumeration of the six sources of the American spirit of liberty, and is natural at similar points in all long speeches. In a shorter speech, such as those proposed in this chapter, it is sufficient to emphasize the point of each paragraph at the end of the paragraph, and the point of the whole at the end of the whole.)

(b) BRANDER MATTHEWS: AMERICAN CHARACTER (Five paragraphs from §II)

Paragraph Subject

Americans care less to have money than to make it.

(*Announcement of subject.*) In his talk with Tolstoi our French critic revealed an unexpected insight when he asserted that the passion of American life was not so much the use of money as the delight in the conquest of it. . . .

(*Paragraph close, emphasis by iteration.*) Merely to have money does not greatly delight him — although he would regret not having it; but what does delight him unceasingly is the fun of making it.

This is shown also by the free giving of the individual rich man to the community.

(*Link.*) The money itself often he does not know what to do with; (*Announcement of subject*) and he can find no more selfish use for it than to give it away. . . .

(*Paragraph close, iteration emphasized by contrast.*) Nothing remotely resembling it is to be seen now in any country of the Old World; and not even in Athens in its noblest days was there a larger-handed lavishness of the individual for the benefit of the community.

And the prestige of wealth here is hindered by the rapid shifting of fortunes.

(*Link*) Again, in no country of the Old World (*Announcement of subject*) is the prestige of wealth less powerful than it is here. . . .

(*Paragraph close, emphasis by iteration of proof.*) Wealth is likely to lack something of its glamour in a land where well-being is widely diffused and where a large proportion of the population have either had a fortune and lost it, or else expect to gain one in the immediate future.

Besides, the United States can show, at least as readily as any other country, many men who have deliberately given up money-making for some pursuit that they liked better.

(*Link.*) Probably also there is no country which now contains (*Announcement of subject*) more men who do not greatly care for large gains and who have gladly given up money-making for some other occupation they found more profitable for themselves. . . .

(*Paragraph close, emphasis by summary.*) There are not a few men to-day in these toiling United States who hold with Ben Jonson that "money never made any man rich, — but his mind."

Still we must deplore many rich men who have the vices charged by foreigners upon the country as a whole.

(*Link.*) But while this is true, while there are some men among us who care little for money, and while there are many who care chiefly for the making of it, ready to share it when made with their fellow-citizens, (*Announcement of subject*) candor compels the admission that there are also not a few who are greedy and grasping, selfish and shameless, and who stand forward, conspicuous and unscrupulous, as if to justify to the full the aspersions which foreigners cast upon us. . . .

.

(*Paragraph close, emphasis by application bringing the point home.*) We need to stiffen our conscience and to set up a loftier standard of social intercourse, refusing to fellowship with the men who make their money by overriding the law or by undermining it.

(c) MACAULAY: THE LIFE OF JOHNSON (Paragraphs 42, 43, 44.)

Paragraph Subject

Johnson ignored the published attacks of his enemies.

(*Link.*) Of other assailants (*Announcement of subject*) Johnson took no notice whatever.

.

(*Paragraph close, epigrammatic quotation, iteration in effect, though not in words.*) No saying was oftener in his mouth than that fine apothegm of Bentley, that no man was ever written down but by himself.

But he impaired his own reputation by publishing *Taxation No Tyranny*.

(*Link.*) Unhappily, a few months after the appearance of the "Journey to the Hebrides," Johnson did what none of his envious assailants could have done, (*Announcement of subject*) and to a certain extent succeeded in writing himself down.

.

(*Paragraph close, summary.*) The general opinion was that the strong faculties which had produced the "Dictionary" and the *Rambler* were beginning to feel the effect of time and of disease, and that the old man would

best consult his credit by writing no more.

This failure was due, not to decaying powers, but to unfitness for the subject.

(*Link.*) But this was a great mistake. Johnson had failed, not because his mind was less vigorous than when he wrote "Rasselas" in the evenings of a week, (*Announcement of subject*) but because he had foolishly chosen, or suffered others to choose for him, a subject such as he would at no time have been competent to treat. . . .

(*Paragraph close, iteration.*) Happily, Johnson soon had an opportunity of proving most signally that his failure was not to be ascribed to intellectual decay.

(These three paragraphs show the same general method of furthering the coherence of the whole by closing each paragraph emphatically and by beginning the next with some reference to this close. But the method is carried out less fully and less formally than in Burke's speech, because Macaulay's essay is neither oral nor, as a whole, argumentative. The passage above, being expository, needs less explicit connection than an oral argument. The rest of Macaulay's piece, though it is called an essay, is so largely narrative that it shows even less of this explicit reference. Where he pauses to explain, he will often announce the paragraph subject at the beginning and iterate it at the end; but in other parts he is simply following the order of events, and this, rather than any expository plan, is the plan of the piece as a whole. In other words, the importance of paragraph emphasis and of transition from paragraph to paragraph varies according to the degree of logic or reasoning in the whole plan.)

*Sentence Emphasis.*¹—Carrying the same principle down

¹ For full discussion of sentences, see Part I., Chapter v.

into sentences, revision adjusts each to its place by seeing that it ends with the right word. The right word for the end of the sentence is the word that is most significant; *i.e.*, either (a) the word most important in the thought of that sentence, or (b) the word most important for carrying forward the thought of the whole paragraph. The coherence of the paragraph is furthered by careful sentence emphasis as the coherence of the whole is furthered by careful paragraph emphasis. Thus prepared by careful emphasis, the transition may be marked by repetition of the emphasized word, by conjunctions, or by demonstratives. In the paragraph below, the words marking the transitions are italicized.

(*Close of the preceding paragraph.*) No way is open but the third and last — to comply with the American spirit as necessary; or, if you please, to submit to it as a necessary evil.

(*Paragraph link, repeating the substance of the preceding.*) If we adopt this mode, if we mean to conciliate and concede, (*Announcement of paragraph subject*) let us see of what nature the concession ought to be. To ascertain the *nature of our concession*, we must look at their complaint. The colonies *complain* that they have not the characteristic mark and seal of British freedom. They *complain* that they are taxed in a Parliament in which they are not represented. If you mean to satisfy them at all, you must satisfy them with regard to *this complaint*. If you mean to please any people, you must give them the boon they ask, — not what you may think better for them, but of a kind totally different. *Such* an act may be a wise regulation, but it is no concession, whereas our present theme is the mode of giving satisfaction.

— BURKE, *Conciliation with America*.

What would be the effect of transposing above of *what nature the concession* and *ought to be*, so that the passage would read *what ought to be the nature of the concession*?

Point out similar explicit transitions in the following:

This country superintends and controls their trade and navigation; but they tax themselves. And this distinction between

external and internal control is sacred and insurmountable; it is involved in the abstract nature of things. Property is private, individual, absolute. Trade is an extended and complicated consideration; it reaches as far as ships can sail or winds can blow; it is a great and various machine. To regulate the numberless movements of its several parts, and combine them into effect for the good of the whole, requires the superintending wisdom and energy of the supreme power in the empire. But this supreme power has no effect toward internal taxation; for it does not exist in that relation; there is no such thing, no such idea in this Constitution, as a supreme power operating upon property. Let this distinction then remain forever ascertained; taxation is theirs, commercial regulation is ours. As an American, I would recognize to England her supreme right of regulating commerce and navigation; as an Englishman by birth and principle, I recognize to the Americans their supreme, unalienable right in their property, a right which they are justified in the defense of to the last extremity.

— LORD CHATHAM, *An address to his Majesty for the Immediate Removal of the Troops from Boston.*

But transitions marked so fully and formally belong only to passages where we wish to call especial attention to the progress of thought. Even for argument, reference so extremely explicit is unusual, and for exposition it is unnecessary. What has been laid down for the linking of paragraphs applies to sentences in lesser degree; for the relation between paragraphs is more important than the relation between sentences. Not every sentence is, or should be, a logical advance from the preceding. In some sentences we pause to iterate or explain or illustrate. Otherwise the thought would move ahead too fast. Now such sentences often need no transition because their bearing is obvious. Their connection is so clear that they need no connective. Connectives, then, are important in proportion to the progress of the thought.

In the paragraphs below mark which sentences have explicit reference to the preceding by (a) repetition of an emphasized word, (b) demonstrative pronoun or adverb, (c) conjunction; which have no such reference, and why. Give the subject of the paragraph, its link or connective reference to the preceding, its method of emphasizing the end. Examine in this way other paragraphs assigned.

(a) For that service, for all service, whether of revenue, trade, or empire, my trust is in her interest in the British Constitution. My hold of the Colonies is in the close affection which grows from common names, from kindred blood, from similar privileges, and equal protection. These are ties, which, though light as air, are as strong as links of iron. Let the Colonies always keep the idea of their civil rights associated with your government — they will cling and grapple to you, and no force under heaven will be of power to tear them from their allegiance. But let it be once understood that your government may be one thing and their privileges another, that these two things may exist without any mutual relation — the cement is gone, the cohesion is loosened, and everything hastens to decay and dissolution. As long as you have the wisdom to keep the sovereign authority of this country as the sanctuary of liberty, the sacred temple consecrated to our common faith, wherever the chosen race and sons of England worship freedom, they will turn their faces towards you. The more they multiply, the more friends you will have; the more ardently they love liberty, the more perfect will be their obedience. Slavery they can have anywhere. It is a weed that grows in every soil. They may have it from Spain, they may have it from Prussia. But, until you have become lost to all feeling of your true interest and your natural dignity, freedom they can have from none but you. This is the commodity of price, of which you have the monopoly. This is the true Act of Navigation, which binds to you the commerce of the Colonies, and through them secures to you the wealth of the world. Deny them this participation of freedom, and you break that sole bond, which originally made, and must still preserve, the unity of the empire. Do not entertain so weak an imagination as that your registers and your bonds, your affidavits and your sufferances, your cockets and your

clearances, are what form the great securities of your commerce. Do not dream that your letters of office, and your instructions, and your suspending clauses, are the things that hold together the great contexture of the mysterious whole. These things do not make your government. Dead instruments, passive tools as they are, it is the spirit of English communion that gives all their life and efficacy to them. It is the spirit of the English Constitution, which, infused through the mighty mass, pervades, feeds, unites, invigorates, vivifies, every part of the empire, even down to the minutest member.

— BURKE, *Conciliation with America*.

(first paragraph of the peroration.)

(b) Do you ask me, then, what is this Puritan principle? Do you ask me whether it is as good for to-day as for yesterday; whether it is good for every national emergency; whether it is good for the situation of this hour? I think we need neither doubt nor fear. The Puritan principle in its essence is simply individual freedom. From that spring religious liberty and political equality. The free State, the free Church, the free School — these are the triple armor of American nationality, of American security. But the Pilgrims, while they have stood above all men for their idea of liberty, have always asserted liberty under law and never separated it from law. John Robinson, in the letter that he wrote the Pilgrims when they sailed, said these words, that well, sir, might be written in gold around the cornice of that future banqueting-hall to which you have alluded, “You know that the image of the Lord’s dignity and authority which the magistracy beareth is honorable in how mean person soever.” This is the Puritan principle. Those men stood for liberty under the law. They had tossed long upon a wintry sea. Their minds were full of images derived from their voyage. They knew that the will of the people alone is but a gale smiting a rudderless and sailless ship, and hurling it, a mass of wreck, upon the rocks. But the will of the people subject to law is the same gale filling the trim canvas of a ship that minds the helm, bearing it over yawning and awful abysses of ocean safely to port.

— GEORGE WILLIAM CURTIS, *The Puritan Principle*.

Accuracy in Words. — Both statement and proof depend on the use of words that leave no doubt. *Achilles was not a hero* — the discussion of this will come to nothing without definite agreement as to the meaning of *hero*. First, then, the proposition must be put into words that make the issue clear, and must further be expanded by an introductory statement, as at pages 247 and 250, wherever there is any risk of ambiguity. Secondly, the discussion must constantly beware of looseness in words. By insisting, for ourselves and our opponents, on accurate definitions and clear distinctions we merely avoid waste of time. Expressions that give apparent support to a proposition by merely stating it in other terms are said to "beg the question." *The government of England is more representative than ours; for it answers more truly the will of the people.* The second member of that sentence begs the question by bringing forward as an argument what is really nothing but a restatement. "Answers more truly the will of the people," is only another way of saying, "more representative." *Writing cannot be taught. If a man has the natural ability to write, he will learn for himself; if he has not, no teaching will make him a writer.* This is more plausible; but, when we scrutinize the terms, we find that *writing* in the first sentence covers more than *write* and *writer* in the second. The first sentence is a proposition about writing in general. The second sentence tries to prove this by assertions about that particular excellence in writing which is called literary. Therefore the opponent should ask at once, What do you mean by *writing*? If you mean literature, there is little debate left. We are not here to maintain that the writing of poetry, for instance, can be taught. But if you mean writing in general, including reports, letters, essays, speeches, descriptions, etc., then your reason does not apply. It begs the question.¹

¹ For study of precision see Part I., pages 90-106.

Force in Words. — A logical brief, a progressive paragraph plan, and scrupulous accuracy in words, necessary as all these are, will not in themselves suffice. They may fail to move. We need in public speaking, not only to prove, but to appeal. We need to bring our message home. Nor should appeal be thought of as separate from proof. A good speaker does not confine himself to argument in one part and to appeal in another. True, he is most careful of appeal in his close. True again, speeches on occasion offer more opportunity for appeal than speeches in debate. Nevertheless a speaker should endeavor to appeal always. Not content with the logic that has satisfied his own reason, he should always try to bring this logic home to his hearers' feelings. For if they are not interested in his points, if they do not care, he may pile up reasons in vain. This means that appeal, or bringing home to an audience, though it has more room at some times than at others, naturally runs all through. It means further that appeal depends on the way of putting a point, on the choice of words. How does Burke bring home his point about the fisheries of America? Not by statistics alone, but by such concrete words as stirred the sympathy of his hearers by suggesting pictures to their imagination.

And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the people of New England have of late carried on the whale fishery. Whilst we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis' Straits, whilst we are looking for them beneath the Arctic Circle, we hear that they have pierced into the opposite region of polar cold, that they are at the Antipodes, and engaged under the frozen Serpent of the South. Falkland Island, which seemed too remote and romantic an object for the grasp of national ambition, is but a stage and resting-place in the progress of their

victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both the poles. We know that whilst some of them draw the line and strike the harpoon on the coast of Africa, others run the longitude, and pursue their gigantic game along the coast of Brazil.

— BURKE, *Conciliation with America*, paragraph 30.

Such appeal by concrete words he makes again and again, now in a single sentence, now in a whole passage:

Already they have topped the Appalachian mountains. From thence they behold before them an immense plain, one vast, rich, level meadow, a square of five hundred miles. Over this they would wander without a possibility of restraint; they would change their manners with the habits of their life; they would soon forget a government by which they were disowned; would become hordes of English Tartars; and, pouring down upon your unfortified frontiers a fierce and irresistible cavalry, become masters of your governors and your counsellors, your collectors and comptrollers, and of all the slaves that adhered to them. Such would, and in no long time must, be the attempt to forbid as a crime, and to suppress as an evil, the command and blessing of Providence, "Increase and multiply." Such would be the happy result of an endeavour to keep as a lair of wild beasts that earth which God, by an express charter, has given to the children of men.

— *Conciliation with America*, paragraph 51.

Yet Burke was most logical of speakers. Analysis shows his briefs to be models, and the march of his paragraphs irresistible. His chief strength is his structure; but his words also are no less carefully adapted to bring each point home. Swift, in attempting to arouse Ireland against a certain coinage act, was even more specifically concrete; for he had to deal with people of much less average education than Burke addressed in Parliament. Thus Swift's

Drapier's Letters were written in such simple, homely words of feeling as appeal to the imagination.¹

And let me in the next place apply myself particularly to you who are the poorer sort of tradesmen. Perhaps you may think you will not be so great losers as the rich if these halfpence should pass; because you seldom see any silver, and your customers come to your shops or stalls with nothing but brass, which you likewise find hard to be got. But you may take my word, whenever this money gains footing among you, you will be utterly undone. If you carry these halfpence to a shop for tobacco or brandy, or any other thing that you want, the shopkeeper will advance his goods accordingly, or else he must break and leave the key under the door. 'Do you think I will sell you a yard of tenpenny stuff for twenty of Mr. Wood's halfpence? no, not under 200 at least; neither will I be at the trouble of counting, but weigh them in a lump.' I will tell you one thing further, that if Mr. Wood's project should take, it would ruin even our beggars; for when I give a beggar a halfpenny, it will quench his thirst, or go a good way to fill his belly; but the twelfth part of a halfpenny will do him no more service than if I should give him three pins out of my sleeve.

2. THE WRITTEN PRESENTATION OF FACTS

The written presentation of facts hardly needs separate discussion of its mechanism. Part I. in detail, and the present chapter in summary review, have applied the principles for revising paragraphs and sentences, not only to speaking, but also to writing. Writing, indeed, is often necessary to careful revision, and is always good practice in the handling of sentences and paragraphs. But beyond this there is a field for the written presentation of facts as distinct from the spoken — the field usually covered by the word *exposition* as distinct from *argument*.² For persuasion

¹ For full discussion of force in words, see Part I., pages 43–58, 138–151.

² See pages 227, 255, 265.

we naturally prefer the oral appeal; for explanation we prefer writing, we like to "have the thing in black and white." Thus what is sometimes called strict, or pure, exposition, excluding all argument or appeal, is better accomplished by writing.

Further still lies that sort of exposition which appeals less to reason than to imagination (see pages 427-428 below). Addison's essays on English country life, for instance, and Irving's too, though they present facts to our reason and draw conclusions, yet seek no more to make points than to make pictures. Such essays, therefore, freely admit description.¹ A logical frame of paragraphs, making the whole composition a progress of ideas rather than a succession of scenes, differentiates them sharply from stories (see Chapter viii.). The plan of the whole is a plan of logic. But the paragraphs are developed less strictly. The careful emphasis and transitions proper to argument and to strict exposition are not needed where sequence is less important. The aim being to suggest descriptively rather than to prove, there is less need to establish connection. Essays of this informal sort aim to discuss, not as in debate, but rather as in conversation. Freedom in all these ways has made the form attractive, ever since Addison exhibited it in the *Spectator*, to essayists whose originality is greater than their research, and who like to touch facts with fancy.

Which of Irving's essays in the *Sketch Book* have most definite progress of thought, and which are most descriptive? Which papers are not essays at all in their main plan, but stories? Draw up in this way a classified table of contents. Classify in the same way essays assigned from the *Spectator*. Report on an informal essay in a current magazine.

Write informal essays on some of the following or similar topics.

¹ For the methods of description, see Part I., pages 108-151.

Make first an outline by paragraphs; but in developing the paragraphs make large use of description, and throughout choose words for simple, direct appeal.

The Country Store.	Janitors.
Election Day.	Tramps.
Living in the Suburbs.	Church Fairs.
Keeping a Dog.	Wearing Sunday Clothes.
Music for the Masses.	How to Take a Vacation.
On "Taking it Easy."	On "Blowing One's Own
What I Like to See in a	Trumpet."
Play.	Lunch.
Our Policeman.	On Becoming an American.
	Advertisement.
	American Hurry.
	Courtesy in Travel.
	The Great American Game.
	Co-education.
	A Book for an Idle Hour.
	Newsboys.
	Umbrellas.

3. THE WRITTEN INTERPRETATION OF LITERATURE

Intensive Reading as Distinct from Extensive. — Quite another sort of reading is the study of literature. In preparing speeches we are reading for information; in studying literature we are reading for inspiration. In the former we are concerned only with facts and conclusions, with what is said; in the latter we are concerned also with form, with how it is said. We go to Shakespeare's historical plays, not for the facts of English history, but for the noble beauty of verse, for imaginations of human character that reach our hearts, for such play-building as catches, fixes, and holds our interest up to the final dramatic solution.

Though both kinds of reading depend more or less on a large library, the latter depends much less than the former. One may go a long way in the study of literature with a few books in his own room. The books corresponding to these two uses De Quincey called respectively books of knowledge and books of power. Books of knowledge, being many, various, and often superseded in the progress of science, are the especial field of the large public library. The great books of power, being few and never superseded, we may have on our own shelves. The former are books to consult with an eye simply to what they contain for our use at the time. We turn from one to another, selecting, omitting, comparing, combining anew (page 229). We may use several in a single hour. The latter are books to ponder for what they suggest, to become familiar with, not merely as so much thought, but as feeling expressing itself in beauty. We read them one at a time and slowly. The former sort of reading, then, we may call *extensive*; the latter, *intensive*.

In collecting facts from books of knowledge what books of power have you met? Instance a book of knowledge and a book of power on the subject of chivalry; on two other subjects of your own choosing. Explain these instances to make the distinction clear. Of the books of power included in your present study of literature, which have also some value as books of knowledge? Show thus that the distinction sometimes holds between parts of the same book, as well as between different sorts of books on the same subject. Illustrate the discussion by the difference between building and architecture. Contrast an experience of yours in reading for debate with an experience in making the acquaintance of a work of literature. Arrange all this for connected oral presentation in five minutes. Write it out afterwards as an essay.

How Composition Helps the Study of Literature. — Intensive reading, too, as well as extensive, may be furthered

by composition. Though writing about a piece of literature is never an important object in reading, it may be an important means. To read *The Deserted Village* in order to write about it would be trivial and perverse. We read it to appreciate it, to feel it, to get an impression. Nevertheless, having read it thus, we may sometimes realize better what we feel by trying to make others sympathize; we may come to appreciate its art better ourselves by explaining its method to others; in a word, we may sharpen impression by expression.

Selecting from the literature recently studied in common some piece that appealed to you more than to your fellows, try to awaken more sympathy in them by showing orally what aspects of it you liked. Present each of these aspects distinctly (melody of verse, excitement of plot, revelation of character, message to us, or whatever else they may be) but group in one paragraph such minor ones as you have least to say about, and put into the last paragraph what seems to you the most important single aspect.

Discuss in the same way why does not appeal to you. In both cases use comparison and contrast, with abundance of instances. Write these out afterward as essays.

To say that this kind of reading is different is to say that the preparation for composition on it is also different. Instead of collecting facts as the very object of composition, we are not dealing, except by the way, with facts at all; and our reading has been slowly assimilated before we think of writing. Instead of grouping facts from several books, we group our own opinions concerning one book, or perhaps one poem. Having appreciated it, we take account of our appreciation; we analyze our impressions so as to give account of them to others. We group and order our impressions because without grouping we cannot present. To convey our impressions, we have to arrange them. This part of the process is like the preparation to present facts; for all exposition demands a plan. But the preceding part

is different. Instead of facts common to all, we deal with opinions and feelings of our own. Thus that kind of exposition in which we interpret literature is prepared from beginning to end by thinking. The preparation is all in one's own head.

But suppose your opinion on a piece of literature is hasty, biased, or ignorant. Suppose your appreciation is very imperfect in your own eyes. Nevertheless your expression of it is not worthless. It may be worth something in general discussion; it is at least worth something to yourself. The object is not to influence the opinion of the larger public. That may be left to more expert critics. It is to show what literature means to you. The value of the study of literature is its value to each student; and a direct means of enhancing this value is to interpret in connected composition whatever appreciation each reader has reached for himself. This does not mean that he must avoid the opinions of others. Novelty is no virtue here; and the discussion of teacher and class, for instance, ought to stimulate appreciation in everybody. Nor does it mean that he must not read the opinions of critics. But it does mean that he should first of all read the book itself by and for himself, and that throughout he should think for himself.

Write an essay of three or four paragraphs, setting forth the good qualities of a book that you read some time ago and have re-read since. The object is to recommend to others what you have enjoyed yourself. *Paragraph I.* Tell what kind of book it is (story, history, travel, narrative, poetry, speech, etc.) and give a summary of its contents. *Paragraph II.* Tell some of the details that you liked, *e.g.*, description of people or scenery, nobility or simplicity of language, clearness of arrangement, humor. *Paragraph III.*, etc. Set forth more fully what seems to you the chief point of excellence or the quality that especially makes the book distinct and different from others.

Grouping Notes of Literary Impressions. — The preparation for such essays may be a slow accumulation, and indeed is better so. Throughout the study of literature, one's own impressions and the ideas brought out in conversation and class discussion may be set down from time to time on slips or cards (page 227), or in a loose-leaf note-book, and indexed by headings. By this means there is soon a plenty of material from which to choose and amplify topics for essays. Though our appreciation of literature is happily not confined to what we can explain under headings, though sometimes our enjoyment of it is too delicate to be analyzed, still there will always be much that we can explain clearly with profit to others and to ourselves. Composition thus makes the study of literature more definite.

Notes of the study of a *story* can be grouped under the general headings: 1. *kind*, or general character and main traits (romance of chivalry, novel of modern manners, sea-story, etc.); 2. *plot* (see Chapter viii), arrangement of the story to heighten interest, skill of the author in combining several plots and in making each situation appeal to our imagination; 3. *characters*, truth to life, distinctness as of real persons, or vagueness as of mere types, noble traits of character, many or few characters, etc.; 4. *setting* or scenery, skill in description, *i.e.*, in making us imagine the surroundings; 5. *special qualities* not included under other headings. Thus the details that strike the attention separately during a course of study can be grouped for connected exposition.

Notes for the study of a *play* may be grouped largely under the same headings. In detail it is often profitable to note why a certain scene is put in a certain place, and what is the effect of a certain character upon others in the play. The time supposed to be covered by the action, the climax, crisis, or turning-point of the play, what is supposed to have happened before the curtain rises and how these facts are communicated to the audience, — all these may be sub-headings under the general heading of plot. Notes on character may be subdivided into (a) character as re-

vealed by habit of speech, (b) character as revealed by actions, (c) character as revealed by the opinions and attitude of other characters. Thus we may judge the imaginary persons of a play as we judge the real persons of actual life.

Notes of a *poem* may be grouped under: 1. *verse*, meter, melody etc.; 2. *description* of nature; 3. *style*, or choice of words; 4. *conception and sentiment*, the idea of the whole, the poet's sentiments regarding human life, and his mood as shown in particular passages.

Notes of *speeches* and *essays* may be grouped under headings from this book; e.g., 1. outline, general plan and progress of thought; 2. paragraphs; 3. sentences; 4. style, or choice of words.

Not all these headings should be used in every case, nor should each be confined always to a single paragraph. What seems most important or interesting in each work should have most space. For the same reason, the order of points should be adjusted to the subject and the audience. The idea is, not to adopt the same plan for every essay, nor to make the treatment formal. On the contrary, the treatment should freely reflect the feelings of the writer. The idea of the suggested headings is merely to group the notes so as to make clear their bearing. The choice and use of the notes is a different and a later task.

Subsidiary Use of Biography and History. — So far nothing has been said of notes on the author and the history of his time. That is because, for the study of literature, the first and most important consideration is always the book itself. With this we should usually begin; on this we should always spend most of our time. The book itself expresses the author's surroundings, and reveals himself, better than he can be revealed by any other means. The study of biography and history as a means to the appreciation of literature should therefore be kept subordinate. Its value in this connection is only to correct or increase our impressions of the literature itself. And there is another reason for considering the subordinate study of biography and

history separately. It is distinct from the study of literature proper in that it deals with facts (see page 314). Thus its method, in both preparation and presentation, is essentially the same as that explained in Chapter i. and in the first section of the present chapter. To prepare an essay on certain aspects of Shakespeare's time or on the character of Scott is much the same task as to prepare a speech or essay on Lincoln or on our trade with South America. Both demand the collection, grouping, and interpretation of facts as distinct from opinions and feelings. For this reason, as well as to keep such study subordinate, it is well to eschew any mere chronological summary of an author's life (see page 225). Better consider his life in such aspects as are most clearly related to his writing; or insert in an essay giving your own interpretation of his book a paragraph on the book as revealing the author.

Subjects for Essays Interpreting Literature

Subjects from the following list should be chosen according to one's familiarity with the books, and should also suggest similar use of other books.

1. *The Character of Cassius* (or any other of Shakespeare's personages). Group your impressions under (1) habit of speech, (2) effect on the other characters on the play, (3) actions. After analyzing thus, select what seem to you the main aspects of his character for an essay of three or four paragraphs.

2. *The Structure of Macbeth* (or any other play). Use the headings suggested on page 317.

3. *Franklin as a Typical American*. What qualities of Franklin, appearing in his autobiography, are typically American? Group your impressions of his character under these heads.

4. *Gray's Elegy*. (1) What is an elegy? Define, compare, contrast, by some investigation in the library. Theme of this elegy? Meter? Make this a paragraph of clear definition; but arouse interest by beginning with some quotation that is at once

striking and typical of the whole poem. (2) Discuss Gray's descriptions of nature, giving instances, comparisons, and contrasts. Close with a summary of the characteristic traits of Gray's description. (3) Sentiments regarding human life, mood of the poet in this and other poems, reflection of the poet's own life (select incidents from his life to show this). (4) Message and impression of the poem as a whole.

5. *The Ancient Mariner as a Ballad*. (1) Tell what a ballad is, and give instances (see page 342). Compare a ballad by Scott. (2) The narrative structure: select headings from Chapter viii.; compare the story-telling with that of some old ballad. (3) The descriptions. (4) The message and impression of the whole.

6. *Comus as a Mask*. (1) The occasion and the theme. Describe the audience, actors, and scene at the opening as you imagine them. Bring out the underlying idea or conception and show how it was adapted to the circumstances. (2) Differentiate a mask from other forms of drama by comparison and contrast, so as to bring out the characteristic traits of this form. (3) Contrast certain parts that are dramatic in action with other parts that are merely spectacular. (4) The meter, beauty of the verse, incidental songs. (5) Is *Comus* characteristic of Milton as you know him from other poems and from reading his life?

7. *The Castle*. From Scott's *Ivanhoe* and other of his works that you have read, and from reference books, explain fully a mediæval castle. Use incidental description freely.

8. *A Tournament*. From Scott's *Ivanhoe*, Tennyson's *Idylls of the King*, and any other books familiar to you, explain the idea and methods of a tournament. Use incidental description freely.

9. *Scott the Romancer*. Show how Scott's sympathies and reading led him to choose the kind of subjects that are most common in his works.

10. *Scott the Story-teller*. Discuss under headings chosen from Chapter viii. Scott's story-telling in *The Lady of the Lake* or *Marmion* (Subjects 9 and 10 may be combined).

11. *The Stage-coach and the Railroad*. De Quincey, in the thirteenth paragraph of his *English Mail-Coach*, says: "The modern modes of travelling cannot compare with the old mail-coach system

in grandeur and power." Does he convince you of this? Explain and describe "the old mail-coach system" as you understand it from De Quincey, Dickens, Hughes (*Tom Brown at Rugby*), or other books, whether history or fiction. Contrast with this the railways of 1849, the date of De Quincey's essay (Consult a cyclopedia under *Railroad*). How far do De Quincey's objections stand against steam railways to-day? Electric railways? Automobiles? The subject may be outlined for a speech before it is worked out as an essay.

12. *The Coffee House*. Explain fully, with incidental descriptions, London coffee houses in the time of Addison.

13. *English Country Life*. Compare the notions that you get of English country life in the early nineteenth century from Irving's *Sketch Book*, George Eliot's *Silas Marner*, and Mrs. Gaskell's *Cranford*, with those of country life in the eighteenth century derived from Goldsmith's *Vicar of Wakefield* and *Deserted Village*, and Addison's papers in the *Spectator*. Other works may be added or substituted.

14. *Essays and Reviews*. Compare the method and style of an essay by Addison with those of an essay by Macaulay, grouping your material under headings chosen from this book; e.g., coherence of the whole, use of description, paragraphs, sentences, choice of words as adapted to the readers in each case, etc. Entitle your composition The Two Kinds of Essays (see page 424).

15. *Why Has the Pilgrim's Progress Endured?* Write an essay to explain the enduring popularity of the *Pilgrim's Progress* and its acknowledged rank as a classic of English literature. Show the extent of its popularity and the causes, the popular qualities that you yourself find in the book. Compare it in this regard with other books. Are *classic* and *popular* synonymous? Are all works of enduring popularity classic? Give instances. Devote a paragraph to making quite clear what is meant by calling the *Pilgrim's Progress* classic. Conclude with a summary of its fundamental qualities.

16. *The Pilgrim's Progress as an Allegory*. (1) Definition of allegory, with instances. (2) Comparison with other allegories, especially with those of life as a pilgrimage. (3) Consistency of

this allegory, whether it is carried out clearly and naturally; *e.g.*, do you feel yourself excited by certain parts as by real life? Does the allegory seem sometimes to be forgotten?

17. *The Character of Bunyan* (or of some other author). Write, not a chronological summary of his life, but an estimate of his character in its most striking traits.

18. *The Puritans of Bunyan's Time; e.g.*, what they believed, how they looked and acted (contrast with the Cavaliers; describe), why they were disliked, what they accomplished. Use your reading of the *Pilgrim's Progress*, the character of Malvolio in *Twelfth Night*, and any other works of fiction known to you, as well as your knowledge of English and American history.

19. *Milton as a Puritan*. (1) Explain who the Puritans were and what they stood for. (2) Tell of Milton's political activities. (3) Certain Puritan qualities in Milton's poems. (4) The main traits of the man, as we gather them from his work and his life; how far his religious attitude affected his art. Make any contrast that you can (A striking contrast is Dante).

20. *Bunyan's Use of the Bible*. Group in four or five paragraphs some of the following; and arrange the paragraphs in such order as will make a progressive essay.

(a) What translation of the Bible did Bunyan use? When and by whom was it made? Has it had much influence on English religion? on English thought in general? on English literature?

(b) Does Bunyan seem usually to copy texts or to quote from memory?

(c) In what sense is Bunyan's style Biblical? Mention two passages in the *Pilgrim's Progress* which are derived directly from the Bible, and tell how the Bible is used in them.

(d) Is Bunyan's use of the Bible like that of the Puritans of his time?

(e) Compare Bunyan's use of the Bible with that of some other author.

(f) Does Bunyan seem to have read the Bible as a collection of books or as a collection of texts? Does he usually speak of books, or of separate passages?

(g) Is Bunyan's simplicity due to the influence of the Bible?

Imitation to Heighten Appreciation.—Another way of applying composition to further the study of literature is imitation. Instead of explaining our appreciation, we try to show it by writing in the same way. This sort of writing, of course, is quite limited. To attempt a scene like one of Shakespeare's would be absurd. No less absurd would be the attempt to equal the literary excellence of any other great author. But without trying to imitate the inimitable, and without any thought of equaling our models, we may yet heighten our feeling for some works by trying to follow their methods and, to some extent, their style. Thus we come to appreciate them better.

Write *Spectator* papers on some of the following, or other topics of your own choice. Instead of using obsolete turns of expression, try by using Addison's methods to reach something like the impression that he makes on you. The length of these essays is unimportant. Instead of a single long essay, several short ones (150-200 words) on as many different topics may be much more profitable. (See also page 313.)

The Country Store.
Uncle Bob at the Theater.
A Country Sunday.
One-cent Newspapers.
A Certain Tendency of Woman-kind in Leaving a Street-car.
Chicago Lodgings.

The Old Meeting-house.
"Taking to the Woods."

On the River.

Economy of Time.

False Shame.

Sunday Newspapers.

The Village Loafer.

The Circus.

Some of these topics suggest a more expository, some a more descriptive, treatment. In this variety they are like Addison's; and, like Addison, the student should aim to make every essay, whatever its main object, interesting by abundance of descriptive detail.

(The following assignments are intended as suggestive of others. Such work should be adapted to the individual and offer considerable range of choice.)

Write an essay (500-600 words) in the style of the two opening and the three closing paragraphs of De Quincey's *Joan of Arc* on some historical person that you admire, or some historical scene that stirs your imagination; *e.g.*, Nathan Hale, The Execution of André, Montcalm at Quebec. Try not to use De Quincey's phrases, but to keep a similar tone or style.

Taking hints of method from paragraphs VI to X of De Quincey's *Joan of Arc*, write on The Cross-Roads, choosing as your subject Albany in the Revolution, for instance, or some other important cross-roads at a particular period of history, and imagining how it must have seemed to live there then.

Taking hints of method from paragraphs XX to XXII of De Quincey's *English Mail-Coach* (Going Down with Victory), describe a crowd that you have seen waiting for some great news, as of war or election.

Write a character sketch of Mr. By-Ends, or some other person in the *Pilgrim's Progress*, using the headings suggested at page 319 for analysis of the characters of Shakespeare.

Outline a character sketch of some real person who reminds you of a person in the *Pilgrim's Progress*. Instead of working this out as an essay, describe him as to looks, actions, attitudes, speech, etc., and suggest how he is regarded by his companions.¹

Now write a dialogue between this person and a companion, imitating Bunyan's method, but keeping to the language of our

¹ For descriptive methods, see Part I., Chapter iii., and page 329 below.

own day. Try to make both these persons speak and act according to their characters.

Compose in the language and characters of our own day a scene like the one between Christian and Hopeful and Mr. Demas. Make Mr. Demas an unprincipled stock-broker, for instance, and put the scene in Wall Street. Imitate another scene of the *Pilgrim's Progress* in the same way.

Write in the style of the *Pilgrim's Progress* the dialogue between Little-Faith and the robbers.

Write part of the Vanity Fair chapter in the language, characters, and surroundings of our own day, setting the scene at Coney Island, in the Bowery of New York, Kearny Street in San Francisco, Butte in Montana, the pleasure-ground of some great exposition, or some other appropriate place known to you.

How Literature Helps the Study of Composition. --- But helpful as imitation may be in heightening appreciation of literature, it is far more widely helpful in improving our own composition. Every chapter of this book brings in literature to the help of composition. From the masters we learn method. Imitation for this purpose is not of style, but of structure, of composition in the literal sense, of the way of putting together. Macaulay will show us how to develop a paragraph or balance a sentence; Burke, how to group facts and build up a progressive series of paragraphs; Dickens, how to describe vividly by concrete detail. In each author we study most that particular method in which he excels. The result is not at all a patchwork or composite of other people; for we deal with our own matter. What we write is our own. We do not write on conciliation with America because Burke wrote on it; we learn from Burke how to make more effective our own debate on the increase of the navy. We learn from Macaulay how to make our interpretation of literature clear and interesting. We learn from Dickens's description of the

Cratchits' Christmas dinner how to make more lively our own descriptions of Thanksgiving Day. In a word, this kind of study should be, not paraphrase of an author's matter, but imitation of his method.¹

¹ For systematic application of this principle, see the present author's *How to Write, a Handbook Based on the English Bible* (The Macmillan Company). A different method of imitation, admitting more paraphrase, is applied in detail to Irving's *Sketch Book* by the Rev. Francis P. Donnelly in his *Imitation and Analysis* (Allyn and Bacon).

CHAPTER VIII

INTEREST BY PLANNING : THE STRUCTURE OF NARRATIVE

Themes in connection with this chapter should be short stories. The difficulty of this task for most students precludes any such degree of achievement as is possible in argument and exposition; but the very effort is of direct value in heightening appreciation of literature. Therefore the stories written out from beginning to end should be few — in many cases only one — and very carefully revised as a study in heightening interest by the form, or plan, of the whole. Other stories may be merely planned, i.e., thought out as to characters, scene, time-lapse, opening, etc. Thus a single plot may sometimes be assigned to the whole class for each to plan and all to discuss together. In such cases it is well to write out the first hundred words or two; for the way of beginning shows pretty well how one has grasped the notion of narrative structure, or plan. Such plan, or outline, as is taught in the preceding chapters for exposition and argument must be studiously avoided for narrative. The main lesson of this chapter is that narrative form is quite distinct. Excellent additional practice may be found in reviewing description with such assignments as are suggested in Part I. Chapter iii; for narrative differs from description mainly in that sustained structure which is the student's greatest difficulty. Without being able to sustain a story of any length, he may yet learn to make single suggestive scenes interesting and significant. Several scenes of this sort are suggested as exercises in the text.

Besides the writing and planning of stories, there should be written as well as oral expositions of stories assigned for analysis. Further suggestions will be found in the text.

1. STORY-TELLING AS UNIVERSAL

Of all writing and speaking, the most popular is the telling of stories. This has been so always, from the days when men lived in huts and sat about a fire on the ground. Indeed, when we go back now to such primitive customs, when we sit about the camp-fire in vacation, we feel most appropriately the primitive impulse to hear and tell stories; but even in ordinary routine few days pass without story-telling. Story-reading, too, in one form or another, fills a large part of the time that we spend on books. Sixty per cent of the books drawn from our public libraries is fiction; our newspapers consist largely of stories of fact; in short, the most constant and extensive kind of composition is narrative, or story.

Yet some people continue to do it very ill. Though every one has to write letters, many people never learn to write them well; though every one has to tell stories, many people have never learned to make them interesting. Besides lack of education, this shows two things: first, that story-telling is an art; second, that its main object is to be interesting. Story-telling is an art evidently, because the same events become in one man's mouth confused and tedious, in another's clear and lively. Its first object is to be interesting, because everything else depends on that. The ultimate object of a story may be to convey information, or to instruct by example, or merely to amuse; but none of these things can it accomplish unless it is interesting. In order to influence a reader, the story-teller must first learn how to hold his interest. An essay may perhaps succeed merely by being clear; but a story will not succeed at all unless it is interesting.

2. STORY-TELLING AS CONCRETE

The art of story-telling, then, means the ways of making a story interesting. Interest in general depends first on adaptation to the audience, and secondly on abundance of definite, concrete detail.¹ Children of fairy-tale age like to begin with "Once upon a time." Older readers usually prefer a story that omits all introductory explanation; they had rather begin as it were in the middle. But all readers and hearers alike, whatever their age or race, enjoy abundance of concrete detail. Every one likes in a story to have his imagination stirred by specific mention of colors, attitudes, smells, and other matters of sensation, but, above all, of the details of motion and sound.

This is one reason for the popularity of the *Ancient Mariner* with young and old alike. From beginning to end it is very concrete, constantly suggesting to the imagination sights and sounds and movement.

The bride hath paced into the hall.

Red as a rose is she.

Nodding their heads before her goes

The merry minstrelsy.

The wedding guest he beat his breast,

Yet he cannot choose but hear;

And thus spake on that ancient man,

The bright-eyed mariner.

"And now the storm-blast came, and he

Was tyrannous and strong.

He struck with his o'ertaking wings

And chased us south along.

"With sloping masts and dripping prow,

As who pursued with yell and blow

¹ Part I., pages 25-32, 109-117.

Still treads the shadow of his foe
And forward bends his head,
The ship drove fast, loud roared the blast,
And southward aye we fled."

Point out the concrete detail in the passage above: sound, motion, attitude, color, etc. Choose from one of your favorite stories in verse or prose a passage containing abundance of concrete detail. Bring this to read aloud and discuss in class.

Point out the concrete detail in the following newspaper story.

Daisy, a fox terrier belonging to Mrs. John Avenius of 280 St. Nicholas avenue, Brooklyn, is troubled by a mystery which concerns her best boy friend, Leonard Emke, who lived a few doors away, but who hasn't been out to play with her since something very strange happened on Wednesday evening.

Just after supper on that day Lennie ran out into St. Nicholas avenue with his ball and Daisy was just crazy with delight. The workmen had stopped digging in the big trench in the street and there was nothing to hinder one's going right up on top of the bank which bordered it, and if one were a five-year-old boy one was very apt to do so.

When Daisy came back with the ball after a long run her playmate had disappeared. Up and down the embankment she ran, the ball in her mouth. Perhaps if she barked he would answer. So she barked and the ball rolled into the hole. Daisy rushed to save it, lost her balance and went down thirty feet, clawing madly at the dirt.

It was damp and cold there and the light didn't get down to the bottom at all. Daisy was rather scared, of course, but presently she found that Lennie was down there too, so she cheered up a little. He was lying very still with one leg doubled up under him, and his head was cut. Daisy began to lick his face and hands, but he didn't move and Daisy's fear grew. She whined and then howled.

After a long, long time Christopher Emke, Lennie's big brother, came down a ladder with a lantern. Daisy was glad to see him, but he didn't pay any attention to her; just picked Lennie up and

carried him out. Daisy had to wait over an hour before another man came down and rescued her.

She heard afterward that Christopher carried Lennie all the way to the German Hospital. But the hospital didn't do him any good, and perhaps when Daisy is waiting for some one to come and play ball with her on the long summer days she will realize in a fox-terrier way what happened to Lennie while she was chasing the ball.

— *New York Sun*, May 15, 1908.

Compare as to abundance of concrete detail two different newspaper stories of another event chosen by you as interesting.

Prepare an oral report to show the application of the passage from Macaulay quoted on page 395 to this section.

The first way of interest, then, is to tell the story in the concrete, to give the light, sound, color, and movement of things, and especially the gesture, attitude, and speech of persons. For this is the way to put the reader there, to make him imagine himself in the scene. By this means a reader enters into the story instead of having it explained. Now to explain a story is to forfeit interest. Among the greatest bores are the people who insist on stopping to explain each incident instead of trusting to our imagination. "Go on," we feel like saying, "Tell me what happened, what the people said, how they looked and moved. Then I shall understand as much as you did." For the way to be lively in story-telling is not to sum up in explanation, but to choose those concrete details which, as we say, tell the tale.

After the battle with Mordred, Sir Bevidere bore King Arthur from the field, threw the magic sword back into the lake, and placed his master on the mystic barge. Compare as to abundance of concrete detail Malory's story of these events in the twenty-first book of the *Morte d'Arthur* with Tennyson's in the *Idylls of the King*.

A child has just fallen off the end of a crowded pier into the water. Instantly there is *consternation, confusion, clamor, attempt at rescue*. Instead of explaining in such abstract terms, tell how the crowd moved, what the mother said and did and how she looked, how a lad dived, etc. Try to give the impression of consternation, etc., without using any such word, merely by what people say and do. Stir the imagination to picture the scene. Use the following story as a model in any point of method that seems to you effective; *e.g.*, the use of dialogue.

Policeman Frederick J. Wilday of the East Fifty-first street station, who got the Rhinelander medal for bravery in 1904, jumped off the Fifty-first street dock into the East River yesterday afternoon and rescued Mary McDowell, seven years old. He and the girl were unconscious by the time others found them safe on dry land.

Mary McDowell, whose home is at 408 East Fifty-first street, went down to the pier after school to watch the boats go by. She says that a big boy pushed her off, but companions assert that she simply got too near the water and tumbled in. Policeman Wilday, on duty at the ferry house at East Fifty-second street, heard from a little girl that Mary was in the river. When he got to the Fifty-first street pier Mary was drifting rapidly twenty-five feet from shore. Nothing was visible but her curly head, and her eyes were closed.

Wilday threw off his helmet and jumped in. The girl disappeared and when she bobbed up again she was off Forty-ninth street. Wilday raced to her side, got a good hold and swam with her to the Fiftieth street dock, narrowly missing the ferry-boat William H. Wickham, which was manœuvring in his wake.

Meanwhile a little girl had run to the McDowell home and cried out: "Oh, Mrs. McDowell, your Mary is drowned in the river." The father and mother got to the pier about the time Wilday reached the shore. Mrs. McDowell threw her arms about the policeman, who was reeling, and kept him from falling.

Bystanders carried the unconscious policeman and girl aboard the ferryboat, and at full speed the Wickham hurried them over

to Blackwell's Island, where both came around all right in the hospital.

—*New York Sun*, May 15, 1908.

Express the happiness of a family reunion on Thanksgiving Day by telling of the arrival of the grandchildren and the gathering about the dinner table. Just as the company sits down the youngest son unexpectedly returns from the Klondike.

Two young people in an automobile, after listening at the top of a hill, swung rapidly down grade around a curve to cross a railway. Just as they were about to cross, they became aware of a fast express almost upon them. By reversing and braking, the driver halted the machine within three feet of the passing train. As if you were the driver, tell your sensations and motions and what you saw and heard of your friend's. Then write another story as if you were the engineer of the express.

Two travelers in an automobile were attacked by timber wolves in a solitary part of Wyoming. Being unable to draw away on account of the steep grade and the mud and snow, or to frighten the wolves by the horn or head-light, they fired as the circling animals closed in. Stopping only to devour the dead, the others closed in again. Ten wolves were killed, and the ammunition nearly exhausted, before the pack fled.

A fireman is carrying a half-suffocated woman along the cornice of a burning building. He reaches the ladder, slips, recovers, descends. Make the incident vivid by telling what the watching crowd below said and did.

The assassination of Lincoln was announced in the midst of business on Wall Street. How do you imagine the shock to have affected people? Tell the incident by imagining what people said and did. Close the story with Garfield's standing on the steps of the sub-treasury to say, "God reigns, and the government at Washington still lives."

The winter at Valley Forge was full of privation for the Continental Army. What does *privation* mean in concrete, physical details? Did the men have blankets enough? Shoes? What did they have to eat? Collecting as many of such concrete details

as you can from histories, weave them ¹ into the story of a young enlisted farmer who (1) resolved at his scanty camp breakfast to endure such hardship no longer, (2) complained to his captain, and (3) was abashed and silenced, at the unexpected arrival of Washington, by discovering that the general fared no better than the men. (4) Going back to his hut and finding his comrades he said Try throughout to suggest the recruit's character by his manner of speech and action.

Concrete Revelation of Character. — The last exercise suggests that talk and actions may reveal something of each person's feeling and character. For concrete detail is especially effective in putting the reader there when it awakens sympathy with persons. A woman's way of talking or walking, a man's gestures, the physical expression of excitement by pallor or trembling of the hands, — such things in actual life are very eloquent to us of states of mind, and, when they are habitual, reveal character. So in story-telling the most important use of concrete detail is for revelation of emotion and character. Thus Dante tells by concrete details the anguish of a father imprisoned with his sons and seeing them starve with him.

When I awoke before the morrow, I heard my sons, who were with me, wailing in their sleep and asking for bread. Truly thou art cruel if already thou grieveest not, thinking on what my heart foretold; and if thou weepst not, at what art thou wont to weep? Now they were awake, and the hour drew near when food was wont to be brought to us, and because of his dreams each one was apprehensive. And I heard the door below of the horrible tower locking up; whereat I looked on the faces of my sons without saying a word. I wept not, I was so turned to stone within. They wept; and my poor little Anselm said, "Thou lookest so, father; what aileth thee?" Yet I did not weep; nor did I answer all that day, nor the night after, until the next sun came out upon

¹ Part I., pages 131-135.

the world. When a little ray entered the woeful prison, and I discerned by their four faces my own very aspect, both my hands I bit for woe.

— DANTE, *The Divine Comedy, Hell*,
Canto xxxiii (Norton's translation).

Thus Thackeray expresses in a significant action the feeling and character of General Webb when he found himself cheated of due honor by the Duke of Marlborough's report in the gazette.

Mr. Webb, reading the gazette, looked very strange — slapped it down on the table — then sprung up in his place, and began, "Will your Highness please to —"

His Grace the Duke of Marlborough here jumped up too — "There's some mistake, my dear General Webb."

"Your Grace had best rectify it," says Mr. Webb, holding out the letter. But he was five feet off his Grace the Prince-Duke, who besides was higher than the General . . . and Webb could not reach him, tall as he was.

"Stay," says he with a smile, as if catching at some idea; and then, with a perfect courtesy, drawing his sword, he ran the gazette through with the point and said, "Permit me to hand it to your Grace."

— THACKERAY, *Henry Esmond*, Book II. Chapter xv.

Compare with this the scene at the end of the same novel, in which Esmond breaks his sword.

Then going to the crypt over the mantelpiece, the Colonel opened it and drew thence the papers which had so long lain there.

"Here, may it please your Majesty," says he, "is the Patent of Marquis sent over by your Royal Father . . . These are my titles, dear Frank, and this is what I do with them" . . . And as Esmond spoke he set the papers burning in the brazier. "You will please, Sir, remember," he continued, "that our family hath ruined itself by fidelity to yours: that my grandfather spent

his estate and gave his blood and his son to die for your service; that my dear lord's grandfather . . . died for the same cause; that my poor kinswoman, my father's second wife, after giving away her honor to your wicked, perjured race, sent all her wealth to the King, and got in return that precious title that lies in ashes, and this inestimable yard of blue riband. I lay this at your feet and stamp upon it. I draw this sword, and break it, and deny you; and had you completed the wrong you designed us, by heaven, I would have driven it through your heart, and no more pardoned you than your father pardoned Monmouth. Frank will do the same, won't you, cousin?"

Frank, who had been looking on with a stupid air at the papers as they flamed in the old brazier, took out his sword and broke it, holding his head down. "I go with my cousin," says he, giving Esmond a grasp of the hand.

—THACKERAY, *Henry Esmond*, Book III. Chapter xiii.

A critical moment in *Silas Marner* is brought home to us by the same means.

"But you must make sure, Eppie," said Silas, in a low voice — "you must make sure as you won't ever be sorry because you've made your choice to stay among poor folks, and with poor clothes and things, when you might ha' had everything o' the best." . . .

"I can never be sorry, father," said Eppie. "I shouldn't know what to think on or to wish for with fine things about me, as I haven't been used to. And it 'ud be poor work for me to put on things and ride in a gig, and sit in a place at church, as 'ud make them as I'm fond of think me unfitting company for 'em. What could I care for then?"

Nancy looked at Godfrey with a pained, questioning glance. But his eyes were fixed on the floor, where he was moving the end of his stick, as if he were pondering on something absently. . . .

"What you say is natural, my dear child — it's natural you should cling to those who've brought you up," she said mildly; "but there's a duty you owe to your lawful father. There is perhaps something to be given up on more sides than one.

When your father opens his home to you, I think it's right you shouldn't turn your back on it."

"I can't feel as I've got any father but one," said Eppie, impetuously, while the tears gathered. "I've always thought of a little home where he'd sit i' the corner, and I should fend and do everything for him: I can't think o' no other home. I wasn't brought up to be a lady, and I can't turn my mind to it. I like the working-folks, and their victuals, and their ways. And," she ended passionately, while the tears fell, "I'm promised to marry a workingman, as 'll live with father, and help me to take care of him."

Godfrey looked up at Nancy with a flushed face and smarting dilated eyes. . . . "Let us go," he said in an undertone.

—GEORGE ELIOT, *Silas Marner*, Chapter xix.

So also we are made to feel the strong emotion of a war-time scene in more familiar surroundings. We are before the country post-office in a crowd filled with the rumor of a great battle.

"Run in for me — that's a good boy — ask for Dr. Stratford's mail," the teacher whispered, bending over me.

It seemed an age before I finally got back to her, with the paper in its postmarked wrapper buttoned up inside my jacket. I had never been in so fierce and determined a crowd before, and I emerged from it at last, confused in wits and panting for breath. I was still looking about through the gloom in a foolish way for Miss Stratford, when I felt her hand laid sharply on my shoulder.

"Well — where is it? — did nothing come?" she asked, her voice trembling with eagerness and the eyes which I had thought so soft and dove-like flashing down upon me as if she were Miss Pritchard, and I had been caught chewing gum in school.

I drew the paper out from under my roundabout, and gave it to her. She grasped it, and thrust a finger under the cover to tear it off. Then she hesitated for a moment, and looked about her. "Come where there is some light," she said, and started up the street. Although she seemed to have spoken more to herself than to me, I followed her in silence, close to her side.

For a long way the sidewalk in front of every lighted store-window was thronged with a group of people clustered tight about some one who had a paper, and was reading from it aloud. Beside broken snatches of this monologue, we caught, now groans of sorrow and horror, now exclamations of proud approval, and even the beginnings of cheers, broken in upon by a general "Sh-h!" as we hurried past outside the curb.

It was under a lamp in a little park nearly half-way up the hill, that Miss Stratford stopped, and spread the paper open. I see her still, white-faced, under the flickering gas-light, her black curls making a strange dark bar between the pale-straw hat and the white of her shoulder shawl and muslin dress, her hands trembling as they held up the extended sheet. She scanned the columns swiftly, skimmingly for a time, as I could see by the way she moved her round chin up and down. Then she came to a part which called for closer reading. The paper shook perceptibly now, as she bent her eyes upon it. Then all at once it fell from her hands, and without a sound she walked away.

— HAROLD FREDERIC, *The Eve of the Fourth*, from *In the Sixties*.

By abundance of concrete detail Dickens makes us gradually familiar with Uriah Heep.

"You are working late to-night, Uriah," says I.

"Yes, Master Copperfield," says Uriah.

As I was getting on the stool opposite to talk to him more conveniently, I observed that he had not such a thing as a smile about him, and that he could only widen his mouth and make two hard creases down his cheeks, one on each side, to stand for one.

"I am not doing office-work, Master Copperfield," said Uriah.

"What work, then?" I asked.

"I am improving my legal knowledge, Master Copperfield," said Uriah. "I am going through Tidd's Practice. Oh, what a writer Mr. Tidd is, Master Copperfield!"

My stool was such a tower of observation that, as I watched him reading on again after this rapturous exclamation and following up the lines with his forefinger, I observed that his nostrils, which

were thin and pointed, with sharp dints in them, had a singular and most uncomfortable way of expanding and contracting themselves — that they seemed to twinkle instead of his eyes, which hardly twinkled at all.

“I suppose you are quite a great lawyer?” I said, after looking at him for some time.

“Me, Master Copperfield?” said Uriah. “Oh, no! I’m a very umble person.”

It was no fancy of mine about his hands, I observed; for he frequently ground the palms against each other as if to squeeze them dry and warm, besides often wiping them, in a stealthy way, on his pocket-handkerchief.

“I am well aware that I am the umblest person going,” said Uriah Heep modestly; “let the other be where he may. My mother is likewise a very umble person. We live in an umble abode, Master Copperfield, but have much to be thankful for. My father’s former calling was umble. He was a sexton.”

— DICKENS, *David Copperfield*, Chapter xvi.

These instances show the suggestiveness of concrete details, not only of action, but also of speech. Of all details, the most suggestive of feeling or character is the way of talking. What does the dialogue in the tenth chapter of *Don Quixote* reveal of the character of the knight and of his squire? Read aloud as expressively as possible from some story of your own choosing a short passage in which the actions, gesture, and speech are strongly suggestive of emotion and character.

A high-school girl, on an errand to the superintendent, crossed a factory yard in which a hundred men were eating luncheon. As she hesitated, embarrassed, and uncertain of her direction, the youngest workman sprang to his feet, civilly offered his services, and conducted her to the right door. Returning through the groups of his companions, he was jeered at until an old workman said something which imposed silence. What did he say? What did the others say? What did each of the principal persons say

and do? How did they stand, sit, look, etc? Tell the whole incident in this way.

A little boy was learning to spin a top. On his first success his elder brother praised him. The next time he failed, but succeeded twice afterwards. Tell the incident with especial attention to concrete details of motion, attitude, gesture, and way of speaking. In this way show first the little boy's nervousness, then his pride in the praise, etc.

An old soldier lay sick and feeble in bed on Memorial Day while a parade of his fellow veterans passed in the street below, escorted by the local militia. His grandson, a schoolboy, sitting by the window, reported what he saw. Each asked questions of the other. Unexpectedly there was a halt just when the grandfather's own company were beneath the window. The band played the Star-Spangled Banner. The old man . . . Tell this incident with dialogue and significant gesture.

Write a dialogue between a shrewd farmer's wife and a no less shrewd ragman over an exchange of rags for tinware. Decide first how you will end the story. Put in look and gesture as you go along.

Write a dialogue between an unreasonably angry passenger who finds himself on the wrong train and the polite but firm conductor who will not stop the express at the passenger's way station. Decide first how you will end. Put in abundance of look and gesture.

These themes should be read aloud in class and discussed.

3. STORY-TELLING AS STORY-PLANNING

Plan not by Paragraphs. — The first means of interest in story-telling is the appeal to imagination and feeling by the concrete. But this is simply the means of all effective description, — indeed, we might almost say of all interest. Concreteness is especially important in story-telling, because here interest is absolutely necessary; but it is not all. There remain questions of composition, of story-telling considered

as story-planning. How shall a story be put together? To these questions no application thus far made of general principles gives sufficient answer. The plan of a story is not like the plan of a speech or an essay. A story does not proceed by paragraphs. True, it has indented spaces; but these, instead of indicating stages of thought as in an essay or speech, merely mark a change of speaker in dialogue, or somebody's arrival on the scene, or perhaps a pause in the action, — in short, something quite external. No, though a story has convenient spaces, it hardly has paragraphs. Instead of proceeding from thought to thought, it proceeds from incident to incident, from action to action.¹ Story-telling tries less to make us think than to make us feel. So a plan of thought will not answer.

Plan not Strict in Older Long Stories. — Why plan at all? Why not simply tell the events in chronological order as they happened, beginning at the beginning and going on to the end? This is possible. Sometimes it is even successful. If the events of the story are novel, or important as facts, and if they are told with abundance of definite concrete detail, a story will go of itself without plan. Such a story is *Robinson Crusoe*. It is interesting almost entirely from the vivid description of each separate incident, and very little from any excitement we feel as to the outcome. We are interested, not so much in going on, in finding how the whole will come out, as in each incident separately. Doubtless Defoe told it thus without plan, in order to imitate the style of a diary; for he pretended that it was the record of a shipwrecked sailor, just as it was written by himself. At any rate, it is interesting without plan, merely from the abundant concreteness of its incidents. It is a thousand

¹The paragraphs at the opening of Irving's *Rip van Winkle*, Hawthorne's *Scarlet Letter*, and some other stories of like method, are really introductory essays. The story proper has not yet begun.

vivid descriptions connected only by happening in succession to the same person. The same kind of interest attaches to certain stories of actual fact, such as Dana's *Two Years Before the Mast*. This method in the twenty-fourth chapter of Genesis involves frequent repetitions. The story of Isaac and Rebekah is told, not to hold our interest in a succession of events, but to instruct us in their meaning. Stories without plan, then, may be interesting for their description or valuable for their instruction. They are interesting in parts, not as united wholes.

Compare two long stories familiar to you so as to bring out a contrast between them in structure, or story plan. Choose for this purpose (1) a story merely accumulating incident, like *Robinson Crusoe*, and (2) a story in which the incidents are so arranged as to excite interest in the outcome, like *A Tale of Two Cities*. Write out afterwards as a short theme.

4. UNITY IN STORY-TELLING: FIXING INTEREST

Unity as Omission.—But this kind of story, simply adding description to description in chronological order, is for most of us at most times practically impossible. For ordinary use it is altogether too long. Short stories are the only ones our friends permit us to tell. Even the student who wishes to become a novelist must learn more about narrative composition than was necessary in the time of Defoe; and only one in a thousand has any story-telling to do that is not short. Our problem, then, is how to plan a short story. Of all short stories in English, none have been more widely popular than the ballads.¹ It is worth while,

¹ The most convenient complete edition of the ballads is *English and Scottish Popular Ballads*, edited from the collection of Francis James Child by Helen Child Sargent and George Lyman Kittredge, Houghton, Mifflin & Co. Of the many volumes of selections the best is the one edited by Professor Gummere for Ginn and Co.

therefore, to seek the reason for this popularity in their way of telling, or narrative method.

SIR PATRICK SPENCE

1

The king sits in Dumferling town,
Drinking the blood-red wine.
"O where will I get a good sailor
To sail this ship of mine?"

2

Up and spake an elder knight,
Sat at the king's right knee:
"Sir Patrick Spence is the best sailor
That sails upon the sea."

3

The king has written a broad letter,
And sealed it with his hand,
And sent it to Sir Patrick Spence,
Was walking on the sand.

4

The first line that Sir Patrick read,
A loud laugh laughed he;
The next line that Sir Patrick read,
The tear blinded his ee (eye).

5

"O who is this has done this deed,
This ill deed done to me,
To send me out this time o' the year
To sail upon the sea!

6

"Make haste, make haste, my merry men all;
Our good ship sails the morn."
"O say not so, my master dear;
For I fear a deadly storm.

7

"Late, late yestreen I saw the new moon
With the old moon in her arm;
And I fear, I fear, my master dear,
That we will come to harm."

8

Loth, loth, were our Scottish lords
To wet their cork-heeled shoon (shoes);
But long ere all the play was played,
Their hats they swam aboon (above).

9

O long, long may their ladies sit,
With their fans into their hand,
Ere ever they see Sir Patrick Spence
Come sailing to the land.

10

O long, long may the ladies stand,
With their gold combs in their hair,
Waiting for their own dear lords;
For them they'll see no mair (more).

11

Half over, half over to Aberdour,
It's fifty fathom deep;
And there lies good Sir Patrick Spence
With the Scots lords at his feet.

Omission vs. Summary. — Here is an interesting story short enough to be read in a few minutes. The events narrated must have covered several days, perhaps weeks. Told in the manner of *Robinson Crusoe*, they would cover many pages of prose. Yet we would not have them thus spun out. We like this brief way. How is the story made brief? First, mark that it is not made brief by summary. A summary would be something like this:

A king of Scotland, wishing to send a new ship to Norway, inquired for a skilful captain. Sir Patrick Spence being praised as the best sailor afloat, the king gave the commission to him. Though appreciating the honor, Sir Patrick knew so well the dangers of navigation at that season that he suspected treacherous influence on the king. Nevertheless summoning his men promptly, he set sail in spite of their forebodings. The embassy of Scotch lords whom he carried was ill prepared for hardship; and all, passengers and navigators alike, were drowned half-way over to Aberdour.¹

No, that is not a story at all, but merely something out of which a story might be made. And if the summary were as long as the ballad, it would still lack the ballad interest. For the ballad does not summarize; it speaks concretely. We hear the actual words of the king, the captain, the old sailor. The wine is blood-red, the letter is broad, the Scotch nobles wear cork-heeled shoes, the ladies have gold combs in their hair, the ominous look of the moon is suggested in a striking figure. Everything is concrete. There is all the difference in the world between this and such a chronological summary of a man's life as we find in a cyclopedia. That is all very useful; but this is interesting. How, then, does the ballad-maker put all this into so little space? In a

¹Other ballads may be summarized for assignments to be worked up into stories. These stories may then be compared with the ballads.

word, by selection. Instead of giving all the details in full, instead on the other hand of compressing all the details into a summary, he picks out certain details. The rest he simply omits. The first lesson in telling a short story is to select and to omit.

What has the ballad-maker omitted? First, how the king happened to be sitting in Dumferling, how he happened to have a new ship, why he wished to send it out; then who Sir Patrick was, how he happened to have men at hand, what the grudge was against him, who brought him the letter, where he found his men, who the man was that spoke of the weather, and, most striking omission of all, what happened between stanzas 7 and 8. Some of these details might be interesting; most of them would be uninteresting; none of them is necessary. He has omitted, then, first, all that is uninteresting; secondly, all that he could safely leave to our imagination.

Omission as Limiting the Time and Place. — In particular, he has limited the time and the place. Instead of beginning with Sir Patrick's boyhood and going on through his training at sea and his incurring the displeasure of the "elder knight," the story-teller has begun after all these things. Some of them he has taken for granted; some of them he has implied, as by Sir Patrick's words in the fifth stanza. He has made no attempt at completeness. He has none of the cyclopedia method. As to place, the story begins in the king's hall, goes down to Sir Patrick on the beach, goes aboard with him, and stays there. It is all either going aboard or being aboard for a single brief voyage. The lesson of omission, then, in the telling of short stories means in particular to leave out as much as possible of the previous history, and to make little change of scene. Since the object is to make the reader imagine himself in the story, do not ask him to imagine himself in rapid succession living

through many scenes in many places. Instead, focus attention on some striking brief period, a period so full of significant actions that by living through it in imagination the reader understands all he needs to understand of what went on elsewhere before and after. For the attempt to make a story clearer by introducing it with previous history leads to summary and so to dullness. Just as description is unified by focusing attention on a characteristic moment,¹ so story-telling is unified by focusing on some brief period full of significant action within a limited area.

This is the way to hold attention and make a single impression. People who wish to begin at the beginning forget that there is no beginning. Our lives are so commingled and crossed, events are derived from causes so remote, that if we are too anxious to begin at the beginning, our hearers will flee before we have fairly started.

A young subordinate, left in temporary charge of a construction gang on a bridge, received word of a flood coming from a broken dam far up the valley. By his prompt and energetic action at the risk of his own life, he saved his company's property and the town below. This should make an interesting story. Must the teller explain why a bridge came to be built at that point? The railroad, having prospered, had decided to lay double tracks throughout its system. This necessitated a wider bridge. Not only so; but to cut off a curve, the company had decided to build an entirely new bridge higher up. But what of the dam? Was the break due to carelessness, or to some unavoidable pressure? A history of the dam might make this clear. And the hero — how came he there? Was his resourcefulness inherited from his father? Let us know the family history. But this method is absurd. There will be neither beginning nor end. The story will be lost in a maze of other stories. The teller will be a bore.

No, the very object of telling a story is to pick out of the

¹ Part I., page 118.

throng of happenings something which you think worthy to stand by itself. In order to make it stand by itself, interesting, significant, giving to others the emotion that it gave to you, you must omit all that is distracting, and especially limit the time and place. Life goes on and on without pause. In history, in the daily newspapers, in our own experiences, it unrolls to us thousands of stories all tangled together. The story-teller's art is to pick out one story at a time and make it stand out by itself.

The following Bible stories intensify interest by limiting the time and place. Though each is part of a longer history, each stands out by itself. Each is complete, needing nothing more for its interest and significance.

Judges vii. 1-22. The Sword of the Lord and of Gideon.

2 Samuel xviii. Absalom, My Son.

Daniel v. The Writing on the Wall.

Daniel vi. The Lion's Den.

Compare these with the simple, unplanned chronological tale of Isaac and Rebekah in Genesis xxiv. All alike are told for instruction; but the others take stronger hold of our interest by limiting the time.

Select a short story of Hawthorne's, such as *The Ambitious Guest* or *David Swan*, which limits the time, and compare it as to intensity of interest with one of his stories which does not so limit the time.

Find a current magazine story which limits the time of action to a single day.

Unity as Selection. — Omission, of course, is the converse of selection. A story-teller omits superfluous events by selecting that period which is most eloquently suggestive, most characteristic, fullest of the interest for which the story is told. And even within that little period he has to select and reject details. What has the teller of *Sir Patrick Spence* selected? Six incidents:

(1) the king's demand over his wine, the recommendation of Sir Patrick, and the instant commission;

(2) Sir Patrick's reception of the commission and his distrust;

(3) his summons to his men and their foreboding;

(4) how the king's emissaries took the storm;

(5) how the ladies waited in vain;

(6) the disaster, Sir Patrick and his men at the bottom of the sea.

Evidently he selected what was most interesting and most picturesque. But scrutiny will reveal more. Why is the opening dialogue interesting? Because it makes us wish to hear more, because it is significant. Why is the sailor's forecast of the weather interesting? Again because we wish to know whether the event tallied with his fear; again because it is significant. Significant of what? Significant of what is to happen at last, significant of the outcome of the whole story, of the point. The story is a little tragedy. The story-teller has chosen those incidents which most suggest its tragic significance. Since each incident thus tends in the same direction, strengthens the same significance, leads to the same point, he is able to make a few do the work of many. He has made his story short by selecting those incidents which are most strikingly suggestive of a single impression. How do you wish the reader to feel at the close of your story? Select all your incidents with a view to that final impression.

The paragraph below is a summary of the character and habits of Rip Van Winkle at the time of his memorable journey up the mountain. Irving did not bring this into his story in detail, because it is merely preliminary to his particular purpose. Make from this material a separate story of your own as follows:—

(1) Aim by concrete details of action, speech, etc., without explanation, to give the impression summed up in the first sen-

tence; *i.e.*, make us feel by what Rip says and does in your story, and by what others say and do, his "insuperable aversion to all kinds of profitable labor."

(2) Limit the time to some one day before the adventure of which Irving tells, and make every thing happen in or near the village.

(3) Let the story end with a characteristic dialogue between Rip and his wife about some piece of farm work that he has neglected; *e.g.*, mending a fence to prevent cattle from straying.

(4) Let the story begin with a dialogue between Rip and his wife about that farm work, which he then apparently sets out to do.

(5) Choose from the hints given by Irving in this and the following paragraphs two or three scenes which will lead up to this close, and in which you will actually picture Rip fishing or hunting, or leaving his own work for others'.

(6) Instead of saying "he would sit," "he would stand," "he would carry," etc., say "he sat," etc.; write all in the past tense as a connected story.

(7) Do not try to imitate Irving's choice of words. Write in your own way, trying simply to make the story move along so as to hold interest.

The great error in Rip's composition was an insuperable aversion to all kinds of profitable labor. It could not be from the want of assiduity or perseverance; for he would sit on a wet rock, with a rod as long and heavy as a Tartar's lance, and fish all day without a murmur, even though he should not be encouraged by a single nibble. He would carry a fowling-piece on his shoulder, for hours together, trudging through woods and swamps, and up hill and down dale, to shoot a few squirrels or wild pigeons. He would never even refuse to assist a neighbor in the roughest toil, and was a foremost man at all country frolics for husking Indian corn or building stone fences. The women of the village, too, used to employ him to run their errands and to do such little odd jobs as their less obliging husbands would not do for them. In a word, Rip was ready to attend to anybody's business but his own; but as to doing family duty and keeping his farm in order, it was impossible.

— IRVING, *Rip Van Winkle*.

What time, place, and incidents would you select for a short story of Sheridan's Ride? Write the first hundred words of this story; the last hundred.

Select incidents in the same way, according to the suggestions of this chapter, for a story of one of the following, or for a story of some other event of your own choosing. Give your story an attractive title. After criticism of an outline of the successive incidents, write it out in full.

The Capture of André.

Fire at the School.

A Hard-Won Victory.

Molly Pitcher.

Nathan Hale.

The Lost Cause of France
(Montcalm).

Manila Bay.

The Siege of the Legations in
China (1900).

The Old Whaler.

Perry on Lake Erie.

The Constitution and Guer-
rière.

Unity of Thought, as in Fables, Exceptional. — In certain distinct cases the unity of a story is almost like the unity of an essay or speech; that is, a story may be told to illustrate some maxim or other sentence summing up worldly wisdom. Such stories are parables and fables. The fable of the *Fox and the Grapes* has a subject sentence, just as an essay or speech might have: *we often pretend indifference to what we cannot attain.* The fable of the *Lion and the Mouse* has for its core the idea that *small kindnesses may bring great rewards*; the fable of the *Miller, His Son, and the Ass*, that *it is folly to be ruled by public opinion*; and so on. A fable is a short story told to illustrate a maxim of worldly wisdom. Since it is really a kind of explanation by illustration, it has the same kind of unity, the unity of an underlying proposition.

This kind of unity is seen again in those illustrative stories which we call anecdotes. Anecdote, indeed, differs from fable only in being a story of fact and often drawn from one's own observation. Both alike aim to explain or prove

something; and this core idea is usually stated in a sentence at the beginning or end, like the subject of a paragraph.¹

The following anecdote begins with a subject sentence, just as a paragraph might begin. In fact, it is very like a paragraph of illustration. On the other hand, if the introductory sentences were omitted, we should have a fairly complete little story.

Shelley's thirst for knowledge was unquenchable. He set to work on a book, or a pyramid of books, his eyes glistening with an energy as fierce as that of the most sordid gold-digger who works at a rock of quartz, crushing his way through all impediments, no grain of the pure ore escaping his eager scrutiny. I called on him one morning at ten. He was in his study with a German folio open, resting on the broad marble mantelpiece, over an old-fashioned fire-place, and with a dictionary in his hand. He always read standing if possible. He had promised over night to go with me, but now begged me to let him off. I then rode to Leghorn, eleven or twelve miles distant, and passed the day there. On returning at six in the evening to dine with Mrs. Shelley and the Williamses, as I had engaged to do, I went into the poet's room and found him exactly in the position in which I had left him in the morning, but looking pale and exhausted.

"Well," I said, "have you found it?"

Shutting the book and going to the window, he replied, "No I have lost it" (with a deep sigh); "I have lost a day."

"Cheer up, my lad, and come to dinner."

Putting his long fingers through his masses of wild, tangled hair he answered faintly, "You go. I have dined. Late eating don't do for me."

"What is this?" I asked, as I was going out of the room, pointing to one of his bookshelves with a plate containing bread and cold meat on it.

"That?" (coloring) "Why, that must be my dinner. It's very foolish. I thought I had eaten it."

— E. J. TRELAWNEY, *Records of Shelley, Byron,*
and the Author. Chapter vii.

¹ Part I., pages 64, 76, 164.

Unity of Feeling the True Narrative Unity. — But in this respect fables and anecdotes differ from most stories. Our object in telling stories is not usually to instruct directly, but to suggest by appeal to feeling. Instead of summing life up, as fables and anecdotes do, it is usually our object in story-telling to interpret life through the imagination, to make people feel it more by seeing and hearing more keenly. You tell a story of the brave lad who saved his schoolmates from fire at the risk of his own life, not because you wish by your telling to prove anything or explain anything, but because you wish others to feel the same joy and inspiration that you feel in that deed. The story of *Sir Patrick Spence* does not explain or prove anything; yet it is well held together; it gives us a definite feeling. Its unity is not so much like the unity of an essay or speech as like the unity of a description.¹ Therefore, instead of being achieved by summary, it is achieved by selection.

Poetry carries this method of selection to the extreme. As a few incidents are made to do the work of many, so a very few details are made to suggest a whole incident. In *Sir Patrick Spence* the opening scene is flashed upon us by the briefest possible dialogue and the mere mention of blood-red wine and the king's right knee. Sir Patrick's feeling and temper are left to a laugh, a tear, a sudden order. See how eloquent in this way is a single stanza of the *Ancient Mariner*.

He holds him with his skinny hand,
 "There was a ship," quoth he.
 "Hold off! Unhand me, grey-beard loon!"
 Eftsoons his hand dropt he.

Prose cannot well do with so little; but prose can follow the same method of selection. For prose story-telling, like

¹ Part I., page 124.

poetry, gains conciseness, not by summary, but by making a laugh, a tear, a frown, stand for a whole explanation, by making a few significant details tell the story. We tell just the motions, attitudes, colors, sounds, that gave us the impression; but we tell only the strongest of these, and we leave out all details that were distracting or insignificant. In general, then, what we call narrative unity, as distinct from logical unity, consists, not in working *from* a single idea or proposition, but in working *toward* a single impression.

Unity as the Dominance of One Character. — And unity in story-telling also focuses attention on one main person. To make a single impression, a short story should confine itself to a few persons, and center on one. The story is his story; our interest is in him; our sympathy is with him. Of the Bible stories cited above (page 348), the most poignant is the story of David and Absalom, because all through it we feel with the king. The whole story is told with reference to David. Whose story is it? is one of the first questions in planning a story for singleness of interest. Most stories that leave a strong single impression keep always before us one main character. In the *Ancient Mariner* our interest is always on the narrator himself. In *Sir Patrick Spence* our sympathy is with Sir Patrick. In the *Chimes* all the incidents are held together by their reference to old Scrooge. Though it is too much to say that every short story must have one dominant character, yet any short story becomes by this means surer of its impression. Narrative unity, then, means negatively omission, and especially the limiting of time and place; it means positively selection of such incidents as bring out the desired feeling and reveal a single dominant character.

Show in two stories that you like which is the main character of each, and how the whole story is told with reference to him.

Suppose the story of André told with Washington as the main

figure. How would you plan this story? Write the opening and the close. Now plan in the same way another story of the same events with the main figure André himself.

5. COHERENCE IN STORY-TELLING: HOLDING INTEREST

Coherence as Leading up to the End. — *Climax and Suspense.* — The difference between the unity proper to an essay and the unity proper to a story affects the story plan. If a short story be told to explain or prove something (page 351 above), the point may be announced at the beginning, as in a paragraph. But if, on the other hand, the story be told for itself, for its own interest, not urging any message, but rousing our sympathy through our imagination, then it is planned by making each incident and each detail heighten our feeling until we reach a climax at the close. Climax, indeed (the Greek word for ladder), sums up in a single figure of speech a good deal of the planning of a story. The close of a story told for interest is the top rung, the height of interest. The object is to lift the interest, as it were, rung by rung, incident by incident, to the highest interest at the close. Thus it happens that the close, the last and strongest impression, is often settled, and sometimes even written, first, because the teller must plan everything to lead up to this scene. But that which he himself has in mind from the beginning he usually holds from the reader till the end. Realizing it fully in his own imagination before he tells his story, he works constantly toward it without divulging it to his reader. In a word, story-telling for interest usually keeps suspense.

The Newspaper Way and the Magazine Way. — Story-telling for information or explanation, on the contrary, has quite the opposite plan. The difference is plain in any newspaper. A newspaper report of such events as are told

in the ballad of *Sir Patrick Spence* would put the point first instead of last. Its aim being to give the information as quickly as possible, it would have a heading in large type, DROWNED; then a summary, still in large type, NEW ROYAL SHIP LOST WITH ALL ON BOARD; then a somewhat longer summary, *The Caledonia, Captain Sir Patrick Spence, carrying the royal embassy to Norway, foundered in yesterday's storm.* Last would come the details in chronological order. This is a natural method of story-telling for news, that is for information. The more important the information, the more important to give the gist of it as soon as possible. The reader may be content with this or with the short narrative immediately following, or he may go on to the more detailed account that is put last. The story is told three or four times, each time with greater fullness. The reader may take as much of it as he chooses. Climax and suspense are out of place.

But outside of newspapers there is hardly any occasion for this method. Where the object, as usually in stories, is not to give information, but to arouse feeling, the point is withheld till the last; for else interest is released too soon. The story-teller's object is to hold and increase interest till the close. Whenever a newspaper writer has this object, he too keeps suspense; but there is so little room in newspapers for anything but news that we may call the former the newspaper method.

Mother Goose has these very bare stories:

- (a) Doctor Foster went to Gloucester

In a shower of rain.

He stepped in a puddle up to his middle,

And never went there again.

- (b) The Queen of Hearts she made some tarts,

All on a summer day.

The Knave of Hearts he stole those tarts,
And ran with them away.

Filling in details from your imagination, tell either of these stories in two ways: (1) as a newspaper story for information, in the following order — (a) summary in a single word for the heading of the column, (b) summary in a phrase or clause for the next line, (c) summary in a sentence for the third line, or third and fourth lines, (d) brief account in one hundred words, (e) extended account, three hundred or more words; (2) as a story for interest (three hundred or more words) by suspense and climax.

Make from the following, by selection, omission, and climax, a connected story of one occasion. Aim to lead the interest up to the impression that fixed habit and the excitement of the moment overcame the mother's instinct. To this end, describe fully the scene just before, during, and just after the stroke of the gong. Make this scene vivid by concrete detail, but keep attention fixed on the dog. Add a briefer description of the dog's return to her pups. Write these scenes first, in order to realize distinctly how your story is to end. Then write the scenes leading up to them, as follows: —

1. A fireman tells a visitor that Bess has pups in the cellar. Tell this part in dialogue.

2. Bess comes upstairs and sniffs about, conversing with Kid while the two men converse about her. These two incidents may well be combined in one scene, if you prefer.

3. The gong strikes. Describe the scene as above till Bess rushes off with the engine.

4. Bess returns.

Omit any details that you do not wish. Insert any details that you think will help your story.

Bess, the spotted dog of Engine 26 in West Thirty-seventh street, has become the mother of eight foolish little dummy engine dogs. When their legs grow a little stronger and their spots a little darker they will be fire dogs indeed. Bess is the daughter of Rose, up with Truck 4, and Rose is descended from the dog given to Engine 39 by Alfred K. Vanderbilt.

In Bess the joy of running with the engine is so strong as almost to overcome her maternal love, and she and her family are at present occupying a coal-bin in the cellar in order to remove temptation as far as possible. But now and then Bess will sneak up to the main floor on a pretext of inquiring after Kid, her spotted partner, who lies under a blanket with his left shoulder in a cast as the result of a collision with the tender. When the bell taps, Kid is forgotten as he strains to lift his body to respond to the alarm, and Bess leaps to her place behind the Jim horse.

When the glorious rush is over and the men settle down to the prosaic work of pouring water on fire, Bess returns to her family cares with the dignified bearing of the woman who has raced half a block after a car and missed it.

"I really must get over this flighty manner," says Bess to herself as she settles down in the midst of her family. "It's not at all becoming to one of my age and responsibilities." Her resolution is steadfast until the gong taps again.

—*New York Sun*, March 19, 1908.

Coherence in story-telling, then, means movement up to a climax, the heightening of interest step by step to the last scene. In this respect again, as in unity, the story of David and Absalom, 2 Samuel xviii. (see page 354), is more intense than any of the others mentioned.¹

With this story as a model, and with the King of England as the principal person, make a story from the following. Imagine fully at first what scene is to be the climax, what people are to be in this scene besides the king, and what they are to say and do.

At the battle of Crecy the young "Black Prince," son of the King of England, was in a division with the Earl of Oxford, Sir Reginald Cobham, and other tried knights. This division was so fiercely attacked by the French that the outlying English archers were driven in, and the fight was hand to hand. Another English

¹ See an analysis of this story in Chapter iii. of *How to Write, a Handbook Based on the English Bible*, New York, The Macmillan Company.

division gave assistance; but still the French pressed so hard that the old knights sent word to the king of his son's danger. The king asked whether his son were dead, or hurt, or brought to ground. When the messenger said no, the king bade him command the prince's men to make no more appeal, so long as the prince was alive, but to let the lad win his spurs and the glory of victory. The messenger having returned with the king's reply, the prince and his company fought till they won.

Having thought out the final scene, select those incidents which will lead up to it most effectively. Probably nothing of the bare summary above need be omitted; but all needs to be made vivid by concrete detail, and rapid by means of dialogue.

Retell the following story so as to lead up to a climax. Select, omit, or add details freely. Reduce the number of persons. Make more use of dialogue.

About five o'clock yesterday afternoon a small gray kitten, name unknown, wandered from somewhere out on to the south-bound Lexington avenue surface-car tracks, a foot south of the Fifty-ninth street corner, sat down calmly and proceeded to make the customary cat toilet.

A woman saw the kitten there and saw, too, a car coming down the street. She ran over to two inspectors of the road, Fred Mackin and John Rowley, and pointed out the kitten. The inspectors called out to the motorman, "Hey! slow up! You'll kill the cat!" Bang! went the brake and the car stopped. So the cat was safe anyway.

The inspector for the line had to walk over and pick up the kitten, because it just kept on doing its washing and never batted a cat's eye. Then they ordered the motorman to go ahead.

That was more than he could do. He had come to a stop covering the Fifty-ninth street crosstown tracks where there isn't any power. You have noticed when the car bumps over those tracks that the lights go out and you cuss because you can't read your paper.

The crowds from the theatres and restaurants about gathered and geyed the railroad people. It took a wrecking crew to shove the car along until it got to power again after twenty minutes of delay.

Capt. Lantry of the East Fifty-first street police station was there and called three men from the house to help regulate traffic.

— *New York Sun*, April 13, 1908.

Complication and Solution. — Sometimes interest is heightened by telling of the hero's difficulties until we wonder how he will conquer or escape. The story-teller ties, as it were, a knot of difficulties and then unties it at the last. The French word, indeed, for the ending of such a story means untying, *dénoûment*. Tying and untying — complication and solution are the more technical terms — is the way of many fairy stories. The knot in *Cinderella* is the loss of the slipper. Tying and untying is the way of most stories that aim at excitement; and it is found in many others. The *Ancient Mariner* has a knot in the slaying of the albatross. But the turning-point is likely to be more marked in a long story, such as a novel, and most marked in a story put upon the stage (page 418). Short stories may or may not follow this method. The sixth chapter of the book of Daniel makes this overcoming of difficulty, not the turning-point of the story, but the whole story. It opens with danger to Daniel, passes through increasing danger up to his apparent death, and gives his release at the end as a climax of surprise. With or without complication, then, the skilful story-teller aims to hold and heighten interest by such a plan of incidents as will make us eager to hear more. Though we can have the interest of surprise only when the story is new, yet with some of the best stories we keep an interest of sympathy through many tellings. Knowing at the start that Daniel was delivered, that Absalom was killed, we enjoy passing once more through those experiences, feeling with the principal person, the hero, as we call him, more and more intensely up to the climax. In fact, the object of coherence in story-telling is to hold each reader for the time in the feeling that he himself is the hero.

In telling the story of André (page 354) what scenes did you select for the purpose of making hearers or readers of your own age sympathize with André (or Washington) as the hero? Revise your story from this point of view. Does the final scene leave the reader in sympathy? Do the previous scenes kindle sympathy?

How many persons did you include in your story, and how many days of action did it cover? Review the present chapter in this way by application to your own stories.

Coherence as Moving Steadily and Rapidly. — *Weaving In.*

— In all these respects narrative coherence is closely bound up with narrative unity. The art of beginning a story in a striking and significant manner is learned most quickly through a habit of limiting the time (page 346 above). By beginning at the right point the story-teller can move on the more easily. Again, the art of narrative coherence is largely the art of going on without interruption, without stopping to explain; and this too depends on skilful omission. For the rest, it consists in linking details by the action of one upon another.¹ When André is challenged by the American pickets, the story need not stop to explain how they came there. Either that may be left out as insignificant or, if it will help the interest of the story, it can be hinted in the dialogue, somewhat as follows:

“No, we must not stay,” said Paulding, taking his long rifle from the corner. “The General thought we might be more useful for the lack of uniforms,” he added, glancing rather ruefully at his shabby homespun coat.

“Does he expect you to spy aught on this road?” cried she.

“Spy?” said Paulding with a quick flush.

A brief dialogue such as that gives all the necessary explanation without stopping the story. We learn that the three are shabby countrymen without uniforms, but none the

¹ Part I., pages 131–135.

less proud, that they carry rifles, and that, for some reason which arouses our curiosity, Washington thinks a certain road should be watched. So, with poetic brevity, the ballad-maker explains in the fourth and fifth stanzas the situation of Sir Patrick Spence while at the same time he goes on with his action. In a word, leaving out all explanation that is not strictly necessary, weave the rest into the action and dialogue, that as in real life we may pick up hints while we move along.

The Narrator. — Sometimes a story will move more easily if you imagine yourself to be one of the characters. Thus you can give the impression of an eye-witness. Of course, it is difficult to tell in the first person a story of one's own bravery or skill without unpleasant boasting. But the narrator can imagine himself to be one of the minor persons, for instance a friend of the hero.

Tell over again the story on page 358, making the main character the Black Prince, and writing to honor him. Tell the story as if you had been a favorite companion of the prince, a noble youth of his own age, fighting by his side and carrying the message from Sir Reginald Cobham to the king. For the final scene, imagine yourself returning to the prince's side just at the turning-point of the fray, seeing the prince's victory, and then reporting the king's reply. Write the story partly in dialogue, without attempting to imitate the language of the period. Limit the time to a few hours.

David Copperfield is told in the first person. *Henry Esmond*, though told in the third person, gives the impression all through of having been written by the hero himself. What instances do you remember of short stories told effectively in the first person?

But most stories are told conveniently and simply in the third person without reminding us of the narrator at all.

6. EMPHASIS IN STORY-TELLING: SATISFYING INTEREST

The demands of emphasis have been clearly implied throughout this chapter. The very idea of concreteness in story-telling (page 329) is an idea of heightening our images of life, and that is an idea of emphasis. The idea of climax is no more an idea of coherence, of leading up, than it is of emphasis, of culminating. In fact, the commonest aspect of emphasis in composition is that of a strong ending. Emphasis in story-telling means that the interest which has been stimulated and heightened, incident by incident, should be satisfied at the end. It means realizing the final scene so vividly in word and action and gesture and other significant detail that it sticks in the memory, and leaves nothing more to be desired. Concrete all through,¹ the best stories are most vividly concrete in that last scene which we read with a sigh of relief. Now we feel the full import. It may be joyous after misery and difficulty; "they lived happy ever after." It may be sad, or even tragic. In either case we sympathize and are satisfied. We feel the outcome as the necessary issue of the story. In that sense the story is finished. It has not merely ceased or broken off; it has made upon us a distinct impression. The scenes that we remember most vividly from stories are often their last scenes, the scenes in which the whole story finally comes out. The practical lesson is, Take care that your story comes out in vivid suggestion at the end.

Recall the last scene of a favorite short story so as to show how its details reveal finally the course of action and the main character.

Write an essay on one of the short stories read in the course of literature, using the headings of this chapter.

¹ For the study of narrative diction, review Part I., pages 43-47, 146-151.

CHAPTER IX

STYLE

Themes in connection with this chapter should be short, frequent, and revised with reference to diction, or details of style. Unified impressions, such as those suggested on page 375, a single point on a single sheet, will give fluency and directness in the writing, and enhance the sense of style in the revision. Incidental longer themes are suggested in the text.

1. THE SUGGESTIVENESS OF WORDS

Throughout this book the stress has been laid upon composition, upon placing and arranging and putting together. Composition, indeed, being definite in principle and practically efficient as a measure and means of education, is the main subject of teaching. What every one wishes above all to learn is how to put what he has to say into effective form. But incidentally, at each stage of the study of form, we have considered also the choice of words. Though this is always more a matter of individual experience and reading and individual use of the dictionary than of general rule, it may now well be reviewed separately under the general headings of *precision*, *concreteness*, and *aptness*.

Precision. — All explanation and argument, though it depends mainly on clearness of form, depend also on clearness of words. The revision of this kind of writing must see to it that the words are unequivocal, that there can be no doubt as to their meaning; and that they are specific, just as definite as study of the dictionary can make them.

Review Part I., pages 36-43, 90-104; Part II., pages 270, 308. Choose from any part of the book, or from your other reading, instances to exemplify these points. Prepare in this way a connected oral discourse on clearness in words, to deliver from an outline by paragraphs. Write this out afterwards as an essay.

Sum up in writing (200 words), under the headings of the chapters noted above, the criticisms on your last half-dozen themes as to choice of words. Close this by expressing what you think should be the direction of your revision in the future.

Prepare with especial attention to English idiom and to precision a written translation of one paragraph of exposition or argument from a foreign author whom you are studying in one of your language courses. Be ready to justify your choice among synonyms.

Concreteness. — All description and narrative, and in general all writing that seeks to make people, not only understand, but also feel, depends upon the choice of words that appeal to the imagination. Such words are concrete. Concrete words are those that stir the imagination by specific suggestions of sound, motion, color, touch, taste. In short, they are words of physical sensations. By such words alone we can make our readers sympathize with our feeling; for these words alone will stir him to imagine himself in the scene. The specific mention of the physical details that roused in us pleasure, pain, contentment, horror, or exultation, is the only sure way to rouse in others the same emotion. We reach the emotions by appealing to the imagination through words of sensation. Thus what is called force or vividness of style depends upon the choice of concrete words.

• Review Part I., pages 43-47, 138-151; Part II., pages 309-311. Choose from any part of the book, or from your other reading, instances to exemplify these points. Prepare in this way a connected oral discourse on interest in words, to deliver from an outline by paragraphs. Write this out afterwards as an essay.

Prepare with especial attention to concreteness a written translation of a narrative or descriptive passage in some foreign author that you are studying in one of your language courses.

Point out in one of the selections quoted in the preceding chapter the force of specific concrete words. Show this force more fully by substituting more general words.

The strikers were advancing toward the works. Make this statement more definitely descriptive by substituting specific words. Expand it by concrete details of sound, motion, etc., into four or five sentences, so as to call up distinct images, as in the following: — “Suppose a man to dig up a galleon on the Coromandel coast, his rakish schooner keeping the while an offing under easy sail, and he, by the blaze of a great fire of wreckwood, to measure ingots by the bucketful on the uproarious beach.”

— STEVENSON, *The Wrecker*, Chapter vii.

Choose from each of the following groups the word that seems to you most distinctly to convey the sensation.

THE NEW MAN AT THE SLEDGE

“What are you doing?” said (cried, blurted, yelled) Jerry, as the hammer (sledge) fell aside (swerved, glanced, slipped) and touched (grazed, struck) his thumb. He moved (slightly turned, shifted) the drill, looking up (glancing up, raising his eyes) enough to see the form (man, legs) before him straighten (stiffen) and the hammer (sledge) move (start, swing up, leap, fly). Bang! (Thud! Whack!) The stroke (blow, impact) was true. “Right!” said (cried, muttered) Jerry. “Look at (keep your eye on) the drill. Don’t mind (watch, look at) me. Else you’ll pound (slam, hammer, knock, smack, bump) my hand (fingers, knuckles).”

This is told from the point of view of the man holding the drill. Now tell it in the first person from the point of view of the man with the sledge, giving the same attention to specific, concrete words, especially verbs.

Revise your last theme on this principle, and explain on the blackboard to the class your substitutions of one word for another.

Examine the following in the same way:

CAUGHT

The boy was confused (flushed and hesitated, dropped his eyes, tugged at a button). "I don't know," he said (muttered, stammered, mumbled). John took (lifted, pulled, picked up, grasped) a stone (rock, flat shale) from the ground (dust between them) and threw (tossed, pitched, flung, hurled) it into the bushes (hazels, alders, thicket). "Is it there?" he said (asked, insisted, pursued), looking at (gazing at, scanning, scrutinizing) the boy's face. The boy. . . .

In the quotation on page 306 from Burke's speech on *Conciliation*, find a synonym for each important word, and justify Burke's choice.

Aptness. — Besides being precise or concrete, the 'right word is apt. We choose words, not only for their exactness or their suggestiveness to the imagination, but also for their fitness. We try to make our words suit the occasion or the mood and the readers or hearers. The same explanation or appeal we have to phrase quite differently according as we address a club of newsboys, or a class in school, or an audience at commencement, or a friendly correspondent, or an employer. Though we may say the same things, we do not keep the same tone. The right tone — that is aptness. Certain words, exact though they are, and concrete, are excluded from general conversation because their associations are too disagreeable. We reject them because they are not apt. On the same ground we choose between synonyms. The difference between *boast* and *brag* is a difference of aptness. Which we use depends upon whom we address, and when, and about what. So of *rot* and *decay*, *dear* and *precious*, *fellow* and *companion*, *scold* and *blame*, *sly* and *astute*, *sweat* and *perspiration*. Thus we must constantly choose among words the one that suits the occasion.

Review Part I., pages 25-32, 47-58. Prepare an oral application of this principle to letter-writing. Write an essay to show that practice in business letters teaches five aspects of aptness which are useful in all affairs: (1) to make and keep acquaintances by the manner of presenting topics of common interest; (2) to praise and blame without exaggeration; (3) to give an order clearly concisely, and courteously; (4) to acknowledge with due appreciation; (5) to be courteous without wordiness. Treat each in a paragraph, and arrange the paragraphs in such order as seems to you effective.

Burke's speech on *Conciliation* was addressed to an audience largely hostile to his ideas. Point out a passage in which the style is adapted to remove prejudice or win sympathy.

For what sort of people was *The Spectator* written? Explain with instances any trait of Addison's style adapted to rouse and hold their interest.

To what kind of readers, or what mood, are the following works respectively adapted? Find reasons for your answer in the style of each: *Sir Patrick Spence*, *Lycidas*, *Macaulay's Essay on Addison*, *The Rape of the Lock*, *Cranford*, *The Sketch Book*, *The English Mail-Coach*, *The Pilgrim's Progress*, a favorite book of your own choice.

Write as problems in aptness of style three of the following letters, or three others to meet distinct situations of your own choosing:—

1. A friend (fix a distinct person in mind) is estranged by an apparent slight of yours. Write to explain and conciliate without seeming either over-anxious or haughty.

2. Your uncle, who has done many kindnesses to your family, has written to offer you a place in his business at ———, with good salary and better prospects, so soon as you are graduated from high school. But you wish to go to college, though you must work your way through. Write to decline his offer, explaining your position, thanking him warmly without fulsome praise, trying to win his sympathy, though you know that he is not convinced of the value of a college education.

3. Your room-mate has fallen dangerously ill. His widowed

mother is in ———, four days' journey away. Telegraph the fact to her in ten words with a view to bringing her at once without alarming her unduly. Telegraph to her again in ten words next morning that his condition, though no worse, is still critical. According to her telegraphed directions, write a letter to her in care of the station master at ———, where she will change cars.

4. Write to the ——— Railroad Company to claim damages for the loss of your baggage.

5. Your associate in the engineering work (or any other occupation that you know better) at ———, through the jealousy of other associates has been misrepresented to the managers. In reply to a confidential letter from the managers asking your opinion of his work, clear him without imputing bad motives to the others, and without writing so warmly as to give the impression that you are biased in his favor.

6. Write explanatory regrets at forgetting an appointment with ———. He (or she) must be vexed. Reinstate yourself in favor without making false excuses.

7. Write a letter of thanks to a friend, describing your pleasure at ——— in the society of ———, to whom she gave you a letter of introduction.

8. Describe the same interesting event in three letters: (a) to an intimate friend of your own age; (b) to a child in your Sunday-school class; (c) to Major C., an old friend of the family.

9. Write a letter of congratulation to your rival on his winning the prize (appointment, scholarship, election) for which you have both been working.

10. Describe the local election (a) in a letter to a boy of eleven, (b) in a letter to some one of your own age. Explain the issues and result of the election in a letter to some older member of your family living at a distance.

11. Write a letter from Montcalm to the minister in Paris, urging that more troops be sent to save New France before it is too late. Montcalm explains what the English have accomplished, and what must be the outcome of their consistent and determined policy unless the French government takes immediate measures to check it. Though the French soldiers in Canada are ready to

dispute every foot, and to give their lives, they must soon yield to superior numbers unless France acts promptly. The new world is at stake. Montcalm writes with a soldier's conciseness, with dignity, without complaint or blame, but with patriotic earnestness. Try to write as he would have written to officials whom he wished to stir without offending them.

Prepare an oral address (page 285) as to an audience of Italian Americans, Swedish Americans, or other recently naturalized immigrants, on the significance of some national holiday (Independence Day, Thanksgiving Day, Memorial Day, etc.).

Besides being apt to the audience and the occasion, words should be apt to the speaker. They should sound like him. We see this most readily in the speech of the fictitious persons of novels and plays. The author has so keenly realized his persons in imagination that he has made each speak like himself (see pages 334-340). How much of the character of Shylock is revealed in his way of speaking! So the fanciful extravagance of the duke in *Twelfth Night* is evident in his habit of speech; so the lovely candor of Desdemona, the pompous ignorance of Dogberry, the worldly wisdom of Mark Antony. Each speaks like himself, in his own individual way. What Shakespeare has thus achieved supremely, every writer of fiction in his degree achieves in the same way. He reveals his characters by their style.

Mr. Micawber, in Dickens's *David Copperfield*, always speaks in the following grandiloquent style. Tell the same facts as they would be told by a man of blunt, plain speech. "In reference to our domestic preparations, madam," said Mr. Micawber, with some pride, "for meeting the destiny to which we are now understood to be self-devoted, I beg to report them. My eldest daughter attends at five every morning in a neighboring establishment, to acquire the process — if process it may be called — of milking cows. My younger children are instructed to observe, as closely as circumstances will permit, the habits of the pigs and poultry

maintained in the poorer parts of this city — a pursuit from which they have, on two occasions, been brought home, within an inch of being run over. I have myself directed some attention during the past week to the art of baking; and my son Wilkins has issued forth with a walking-stick and driven cattle, when permitted, by the rugged hirelings who had them in charge, to render any voluntary service in that direction — which I regret to say, for the credit of our nature, was not often, he being generally warned with imprecations to desist.”

— DICKENS, *David Copperfield*, Chapter liv.

Select for reading aloud a passage in the characteristic style of Sir Roger de Coverley, the Vicar of Wakefield, or some other personage studied in the course of literature.

IMAGINARY CONVERSATIONS

Write some of the following dialogues (150–200 words) or others of your own choosing, as exercises in the adaptation of speech to character. Some of the exercises at page 340 of the previous chapter may be used at this point.

1. *At the Counter.* Write a dialogue between an exacting and irritable woman, bent more on seeing than on buying, and a tired shop-girl trying to keep her temper at the close of a hot day.

2. *The Train Despatcher,* having announced that the express for ——— would be an hour late, was besieged with questions. A nervous woman feared an accident. A commercial traveler wished to know if he could make connections at ———. An Italian immigrant did not understand. An angry man asked why another section would not be run from this station, etc. Tell this mainly by the replies of the despatcher, who remained calm and courteous, but not very communicative. Bring in as many of the questions as seem necessary for clearness, but none that will be sufficiently implied by the answers. Express incidentally in concrete detail the sound, motion, attitudes, gestures, etc., of the crowd.

3. *Washington and General Braddock.* Write a dialogue (150–200 words) between the young Colonel Washington and General

Braddock, in which the former dogmatically announces his plan of attack upon the Indians, and the latter courteously tries to dissuade him. Introduce details of manner and gesture.

4. *Arnold and Gates*. At the battle of Saratoga, General Gates having been placed in command over Generals Arnold, Schuyler, and Morgan, Arnold urged a more vigorous attack, and finally persuaded Gates to let him lead one division against the enemy. Arnold was quick, impetuous, jealous, eager for fame; Gates, cool, cautious, irritated at Arnold's boldness. Reviewing the facts in some history, write a dialogue between the two showing the character of each.

5. *The New Inspector and the Old*. Re-reading the introduction to Hawthorne's *Scarlet Letter*, write a dialogue between the new inspector, who is much stirred in imagination by his discovery of the scarlet letter, and the old inspector, who, having no imagination, regards the letter in a matter-of-fact way as a bit of rubbish.

6. *Grant and Lee*. Write a dialogue between General Grant and General Lee at Appomattox concerning the articles of surrender. Try to make each speak according to his character as you understand it: Grant, rather bluntly, but with honest concern and admiration; Lee, with somewhat more formal courtesy, with greater fulness, and with a calm dignity. Review the facts in some history. Imagine the details of attitude and gesture.

7. *The Captain and the Boy*. The captain of a New Bedford whaler dissuades a boy from running away to sea.

8. (300 or more words.) *Before Calais*. When Edward III of England had taken Calais after much hard fighting and loss, he angrily declared that he would put the inhabitants to the sword. Then the French knights recanted their surrender, declaring that they would suffer beside the poorest lad that had helped to defend the city. The English knights, headed by Sir Walter of Manny, finally persuaded the king to change his purpose; but he insisted on taking the lives of the six chief burgesses. Sir Walter having protested in vain, Queen Philippa, who had accompanied Edward to the war, knelt and interceded with tears till the king yielded. Without attempting extended dialogue, make this scene vivid by attitude and gesture, with occasional dialogue to show

the character and mood of the actors. Begin with Sir Walter's report of the decision of the French knights. The king replies angrily, Sir Walter pleads for consideration; the king, after some conversation, yields in part. Give then the words of the queen, and finally, in one sentence, the last words of the king.

These are exercises of the imagination. They are valuable for fixing the idea of style as the expression of personality rather than for any practical use. Practically, aptness to the speaker means aptness to oneself. The main object of studying words is not that we should speak or write like somebody else, but that we should better express ourselves. We study the style of the *Spectator*, not in order to acquire Addison's style, but to improve our own. From his De Coverley papers we learn to write a more interesting letter about our own experiences in the country, to give so specifically the concrete details of the people that we meet as to make them interesting to others, to substitute more precise and suggestive words for the vague, general terms that may occur to us at first. In that sense only we study to write like Addison, or Irving, or Hawthorne, not in the sense of attempting to sound like them. What we write will sound like ourselves so long as we choose the subject and the details that appeal to us, and the words that seem to us most expressive.

The Personal Quality. — The danger, therefore, is not that our talk and our letters should sound like Addison, but that they should sound like anybody — or nobody. There is a real danger of talking and writing in such set, commonplace words as give no inkling of ourselves. The danger comes from carelessness or laziness. Thus we may make our letters dry catalogues instead of making them express ourselves. The expression of oneself — that is the fundamental interest, not only in literature, but in all familiar conversation and letters. With this aim, any

educated person who really cares to may make himself interesting. He need not talk about himself. If he habitually chooses for subjects the things of daily life that have impressed him, and if he expresses them frankly in such words as will sharply convey the impression, he will acquire a personal style, a style of his own. Profiting by all the hints that he gets from his reading, it will be none the less his own; for it will express his own way of looking. Since no two of us on the same journey will notice always the same things, or be affected by them in the same way, each of us, by accustoming himself to express his own impressions, may reach a certain personal quality. Though it may not be style in that higher sense which we attach to the personal quality in literature, it will be style in that more common sense in which we speak of his style in walking or gesture, in intonation or manner. It will be, even more than these, the expression of himself. Any one who is not content to talk and write like everybody else may learn to talk and write like himself.

Think of some incident within your own experience, the more recent the better, which roused in you strong feeling — pity, anger, admiration, fear, enthusiasm, or whatever else it may have been. Recall this to mind as distinctly as you can in all its significant details: how people spoke, looked, acted; the sounds and motion of the scene; the lights or colors of the surroundings, etc. Without naming your feeling, and without explaining more than is absolutely necessary, describe the scene in not more than two hundred words by choosing such concrete details and such words as will make the reader feel with you.

Selecting from the following list two subjects of which you have had most experience, describe each scene by such details and in such words as will bring out the impression indicated by the title. Tell it in the past tense as a story. Without aiming at style, write frankly as the thing strikes you.

1. *Work*, hard physical toil; *e.g.*, (a) laborers laying rails (give

the sound and motion of the picks and shovels, the attitude of the gang boss, sweat, shirts open at the neck, red sand or yellow clay, smell of the earth and the field, etc.); or (b) girls at work in a factory (sound of the machines, attitude, motion, etc.); or (c) carpenters at work in a shop or on a roof; or (d) fruit-packers; or (e) any other scene of work more familiar to you. Close with what happens at the noon whistle. Begin with what the people are doing five minutes before. Choose such words as will give a quick and lively impression of activity. Pay especial attention to the verbs.

2. *Play, recreation, fun*; e.g., (a) children playing "Prisoner's Base" in the school yard; or (b) children playing some particular game in the street; or (c) the return to camp after fishing; or (d) factory hands playing baseball at noon; or (e) a picnic game; or (f) any other scene of play more familiar to you. Let (a) end with the school bell; (b) for contrast, with the passing of the patrol wagon; (c) with sitting down to supper; (d) with the one-o'clock whistle; (e) with the call to assemble for the train. Begin in each case a few minutes earlier, when the fun is at its height. Pay particular attention to attitude, gesture, and sound (cries, etc.). Make the verbs lively.

3. *The Crowd*. Recall your experience in some crowd, audience, or congregation. How did you feel? Express this feeling, without naming it, by giving specifically those concrete details of touch, sound, motion, odor, light, etc., which made you feel so.

4. *Fatigue*. 5. *Disdain*. 6. *Pluck*.

Treat in the same way some of the following, or similar subjects from your daily life. Choose in each case (a) an incident that suggests to you a definite feeling, and (b) a characteristic moment at which the details that give this feeling are naturally thickest.¹ Narrate the scene in the past tense and (usually) the first person. Use characteristic dialogue wherever it will help your impression. Limit it to about 200 words.

Picking Berries.
The Last Paper.

The Last Examination.
The Camp Meeting.

¹ Part I., pages 118-120, 130.

Catching the Boat.
 The Ninth Inning.
 A Hot Day in the Field.
 On the Bridge.
 A Country Dinner.
 The Swimming Hole.
 In Church.
 Selling a Horse.
 The Grocery.
 The Drug Store.
 A Street Fakir.

Captain Billy and His New Boat.
 The Country Store at Mail Time.
 A Field Goal.
 The Haunted House.
 Buying Clothes.
 The Camp Fire.
 The Ragman.
 Gypsies.
 "Umbrellas to Mend."
 The Merry-go-Round.
 The Circus.

(To yield the best results, this sort of practice should be daily for not less than six weeks; but it is valuable even when less frequent or less extended.)

2. THE SOUND OF SENTENCES

On, then, all Frenchmen that have hearts in your bodies! Roar with all your throats of cartilage and metal, ye sons of liberty! Stir spasmodically whatsoever of utmost faculty is in you, soul, body, or spirit; for it is the hour! Smite thou, Louis Tournay, cartwright of the Marais, old soldier of the regiment Dauphiné! Smite at that outer drawbridge chain, though the fiery hail whistles round thee! Never, over nave or fellow, did thy axe strike such a stroke.

— CARLYLE, *French Revolution*, V. vi.

The force of this passage is due partly to specific, concrete words, especially to the apt verbs, *roar*, *smite*, *whistles*, etc. But it is due also to the form of the sentences. They swing, as it were, in time with the action. Our imagination is stirred, not only by the suggestiveness of the words, but by the very sound of the sentences. This will become plainer if we combine the same words in different sentence-forms:

All ye Frenchmen that have hearts in your bodies, ye sons of liberty, on, then! roaring with all your throats of cartilage and

metal, stirring spasmodically, for it is the hour, whatsoever of utmost faculty is in you. Louis Tournay, cartwright of the Marais, old soldier of the Regiment Dauphiné, though the fiery hail whistles round thee, smite at that outer drawbridge chain; for thy axe never struck such a stroke over nave or fellow.

The words are the same; but the description no longer carries us with the same swing. Evidently feeling is conveyed, not only through the force of separate words, but also through the movement of sentences. We are not fanciful, then, when we speak of a passage as *sounding* right or wrong. The effect of the sound of sentences contributes also to the dignity and solemnity of the familiar Gettysburg address:

Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure.

The effect of this is of course primarily the effect of the thing said, and secondarily of the aptness of the separate words. But without the change of a word this impressive opening will lose much of its effect by mere change in the sentence-forms:

Our fathers brought forth upon this continent a new nation. It was conceived in liberty. It was dedicated to the proposition that all men are created equal. That was fourscore and seven years ago. The great civil war in which we are now engaged is a test. Can this nation, so conceived and so dedicated, long endure? Can any nation?

The impression is quite changed, as when a piece of music is played in the wrong time. What is thus apparent in two passages so widely different is true of all composition that appeals to feeling. Aptness, or appropriateness to

the mood that we wish to awaken, depends, not only on the choice of words, but on the sound of clauses and sentences, on their rise and fall,—in a word, on their movement.

The Sound of Verse. — The effect of sentence-movement upon feeling is plainest, of course, in verse. Poetry is the highest expression of feeling in words; and much of its power to stir us comes from its movement, from the way in which its sentences run or flow; *i.e.*, from its sound. This is never independent of its meaning; for we are not much moved by versified nonsense; but it has, nevertheless, an effect of its own. The beauty or pathos or gaiety of verse is partly an effect of the sound of its sentences.

The curfew tolls the knell of parting day,
The lowing herd winds slowly o'er the lea,
The ploughman homeward plods his weary way,
And leaves the world to darkness and to me.

The slow and solemn effect of this stanza is due first to the choice of details; that is, to the things talked about. It is due also to the specific, concrete words in which they are expressed: *curfew* (not bell), *knell* (not stroke), *plods* (not walks), etc. So much is plain from our previous study. But there is something else. The impression of slowness and solemnity is enhanced by the very sound of the long vowels and by the flow of the verse. Contrast these sounds and this movement with those of Browning's *Pied Piper*:

All the little boys and girls,
With rosy cheeks and flaxen curls,
And sparkling eyes and teeth like pearls,
Tripping and skipping, ran merrily after
The wonderful music with shouting and laughter.

Again the effect is due to the choice of details and to the concrete, specific expression; but the impression of lightness

and gaiety is very much enhanced by the short vowels, the short lines, the quick rhythm. The verse dances in time to the feeling. What is felt in this striking contrast is true of poetry in general. Poetry, being the expression of feeling, communicates the poet's mood by aptness of sound.

Blow trumpet! he will lift us from the dust.
 Blow trumpet! live the strength, and die the lust!
 Clang battle-axe, and clash brand! Let the King reign!
 — TENNYSON, *Idylls of the King, The Coming of Arthur*.

I sprang to the stirrup, and Joris, and he;
 I galloped, Dirck galloped, we galloped all three.
 "Good speed!" cried the watch, as the gate-bolts undrew.
 "Speed!" echoed the wall to us galloping through.
 Behind shut the postern, the lights sank to rest,
 And into the midnight we galloped abreast.

— BROWNING, *How They Brought the Good News from Ghent to Aix*.

Notice the marked effect of the short clauses in Old English poetry as imitated at page 405.

Select for reading aloud a passage of verse in which the sound is adapted to the feeling.

Rime. — Rime, which is characteristic of most modern poetry, shows the pleasure that we have in mere sound. The regular recurrence of a certain sound at the end of the line adds nothing to the sense; but it adds much to our feeling. Aside from the emphasis that it gives to certain words, it is there purely for the pleasure of the ear. Similar is that habit in Old English verse of repeating, not the sound at the end, but the sound at the beginning. *Alliteration*, as it is called, long used before the adoption of rime, has been retained in modern verse as an added appeal to feeling, an added means of pleasure:

*Shock after shock, the song-built towers and gates
Reel, bruised and butted with the shuddering
War-thunder of iron rams.*

— TENNYSON, *Tiresias*.

Rhythm and Meter. — But far more important than rime or alliteration in aptness to the mood of the author or the scene is the beat of the verse, the *rhythm*. The rhythm of verse is the regular recurrence of accent or stress. This is the chief means of suggesting feeling by sound. The quickness or slowness of the movement, its lightness or heaviness, is mainly an effect of the rhythm. Verse began in dancing. The beat of the word chimed with the beat of the foot, as in marching songs to-day. And as our English language has kept, more than some other languages, the old habit of marking the root syllable of every word by a stress or accent, English verse still depends mainly upon beats or stresses. The rhythm of English, whether in verse or in prose, is the recurrence of beats or stresses as in dancing or marching; and the rhythm of English verse — what we call *meter* — is regular or fixed recurrence of beat or stress. Thus we speak of a verse of two accents or a two-stress verse:

Óver the móuntains
And óver the wáves,
Únder the fóuntains
And únder the gráves.

The ballad of *Sir Patrick Spence* (page 343), like many other ballads, is in four-stress lines alternating with three-stress lines. Shakespeare and Milton wrote oftenest in a five-stress verse:

To bé or nót to bé, thát is the quéstion.

The movement or flow of the verse depends on the number of unaccented syllables coming between two stresses. When

there is regularly one unstressed syllable between, the verse is called *trochaic*:

Téll me nóit in moúrnful númbers.

The stressed syllable taken with the corresponding unstressed syllable is called a *foot*. Thus *moúrnful* or *númbers* is called a *trochaic foot*, or *trochee*; *i.e.*, a running or rapid measure. When two unstressed syllables follow the stress, the foot is called a *dactyl*. The word means *finger*. It is applied in this way because a finger has one long joint and two short ones, as:

Rashly importunate.

These terms, borrowed from Greek verse, are commonly expressed by signs: — ∪ for a trochee; — ∪ ∪ for a dactyl. The signs, which are the same as those used in dictionaries to mark the length of vowels, are more appropriate to Greek verse, which really depends on the alternation of long and short. In English verse, though they express rather stress and unstress, they are nevertheless convenient. To *scan* a verse is to read it aloud, or to write it out in these signs, so as to show its rhythm; *i.e.*, the number and frequency of its stresses.

When the verse goes the other way about, beginning with the unstressed syllable, it has a different effect, and is called by a different name. With one unstressed syllable between, it is called *iambic*:

It blésseth him that gíves and hím that tákes.

∪ — ∪ — ∪ — ∪ — ∪ —

The single foot is called an *iambus* or *iamb* (∪ —). This is merely a trochee turned around. A dactyl turned around is called an *anapest* (∪ ∪ —):

For a lággard in lóve, and a dástard in wár,
Was to wéd the fair Éllen of yóung Lochinvár.

◡ ◡ — ◡ ◡ — ◡ ◡ — ◡ ◡ —
 ◡ ◡ — ◡ ◡ — ◡ ◡ — ◡ ◡ —

But in dividing verses thus we must remember two important facts. First, in using iambic or anapestic verse the best English poets admit an occasional trochee or dactyl for variety:

Cassio. The riches of the ship is come on shore!
 Ye men of Cyprus, let her have your knees.
 Hail to thee, lady! and the grace of heaven,
 Before, behind thee, and on every hand,
 Enwheel thee round.

Desdemona.

I thank you, valiant Cassio.

— *Othello*, II., i. 82.

This passage, like many another in Shakespeare, though it follows generally the iambic measure of all his plays, has in its third line a movement rather trochaic and dactylic. Being too slight to disturb the normal iambic flow of the meter, such variations give a pleasant relief. A poem that is strictly iambic throughout, with no such variations, tends to become monotonous. Besides, in English verse, the number or place of the unstressed syllables is of less consequence than the stresses. English meter is determined not so much by the number of syllables as by the number of stresses. Hence arises a second important fact of English meter. The unstressed part of the foot is sometimes omitted. Thus two stresses are brought together, with an effect of slowness, weight, or pause, and the foot is said to be *syn-copated*:

Break, break! break!

On thy cold gray stones, O sea!

— — —
 ◡ ◡ — ◡ — ◡ —

These two lines, though the first has three syllables and the second seven, are metrically equivalent; for they have

the same number of stresses. We feel them so as we read them, dwelling longer on each syllable of the first verse; and we feel also the variety and the adaptation to feeling in the lingering measure of the first. The opening verse of Hamlet's soliloquy, quoted above, has syncope in the fourth foot; and the marching hymn of Arthur's knights, quoted on page 379, derives from this device much of its effect.

Adaptation of Verse-Form to Feeling. — The adaptation of rhythm to mood, indeed, is the chief way in which verse makes its appeal to feeling by sound. Thus certain verse-forms are felt to be appropriate to certain kinds of composition. For narrative poems of weight and dignity we are accustomed to the five-stress iambic. This is called the English *heroic* verse. It is the verse of Shakespeare's plays, of Milton's *Paradise Lost*, of Tennyson's *Idylls of the King*. Rhymed in couplets (*heroic couplet*), it is the favorite verse of the eighteenth century, and is heard at its best in Pope. On the other hand, the simple ballad tales use a shorter verse:

The k ^í ng s ^í ts in Dumf ^{ér} ling t ^ó wn,	υ — — υ υ — υ —
Dr ^í inking the bl ^ó od-red w ^í ne.	— υ υ — υ —
O wh ^é re will I g ^é t a go ^ó d s ^á ilor	υ — υ υ — υ — — υ
To s ^á il this sh ^í p of m ^í ne?	υ — υ — υ —

Similarly Scott uses a four-stress verse in the *Lady of the Lake* and *Marmion*. A still shorter line enhances the feeling of stir and go in Drayton's fine *Ballad of Agincourt*:

Fair stood the wind for France,	— υ υ — υ —
When we our sails advance,	υ — υ — υ —
Nor now to prove our chance	υ — υ — υ —
Longer will tarry;	— υ υ — υ
But putting to the main,	υ — υ — υ —
At Caux, the mouth of Seine,	υ — υ — υ —
With all his martial train,	υ — υ — υ —
Landed King Harry.	— υ υ — υ

Poitiers and Cressy tell,
 When most their pride did swell,
 Under our swords they fell.

No less our skill is
 Than when our grandsire great,
 Claiming the regal seat,
 By many a warlike feat
 Lopped the French lilies.

Any group of lines forming, as in the two poems above, a definite part is called a *stanza*. The ballad of *Sir Patrick Spence* is written in stanzas of four lines riming alternately, the first and third of four stresses, the second and fourth of three. This is the simplest of stanzas, entirely appropriate to the simple ballad stories. Drayton in his *Agincourt* uses a stanza of eight three-stress lines. 1, 2, and 3 rime together; 5, 6, and 7; 4 and 8. Thus the scheme of rimes may be indicated by letters: *a a a b c c c b*. In the familiar love-poem *To Althea, from Prison*, two ballad stanzas are combined in one: *a b a b c d c d*:

When love with unconfined wings
 Hovers within my gates,
 And my divine Althea brings
 To whisper at the grates;
 When I lie tangled in her hair,
 And fettered to her eye,
 The birds that wanton in the air
 Know no such liberty.

Poetry of this latter kind, not telling a story, but simply expressing emotion, is called *lyric*, or song (see page 408). The difference between lyric movement and narrative movement is marked in those scenes where Shakespeare introduces songs, as also in Tennyson's *Princess*. After the steady march of the longer narrative verse the charm of the lyric stanzas is felt the more by contrast. A reading aloud

of the close of Act II. in *As You Like It*, for instance, beginning with "All the world's a stage," will mark the adaptation of rhythm to feeling.

Further, poets suggest or heighten feeling by the choice and adaptation of the lyric stanza itself. The best English lyrics reveal an almost infinite variety of adaptation, ranging all the way from the frank and simple stanza *To Althea* to such complex and subtle rhythms and rime-schemes as those of Gray's *Bard* or Wordsworth's *Intimations of Immortality*. Find the following lyrics and read them aloud. By scansion of each, and by comparing one with another, show the adaptation of the verse and the stanza to the mood.

Where the bee sucks, there suck I.
Ring out, wild bells, to the wild sky.
A wet sheet and a flowing sea.
Of all the girls that are so smart.
Piping down the valleys wild (Blake).
Toll for the brave.
O World! O Life! O Time!
Lead, kindly light, amid the encircling gloom.
Go, lovely Rose!
Oft in the still night.
Hail to the Chief who in triumph advances!
O wild west wind, thou breath of Autumn's being.
Break! break! break!

The Sound of Prose. — Thus poetry shows us clearly how far suggestions of feeling are heightened by sound. It shows us that the heightening comes mainly from rhythm. This method of enhancing emotion by sound is proper to poetry; but it is possible also to prose. Indeed, the difference in this regard between the poetry of feeling and the prose of feeling is not in the presence or absence of rhythm, but in its regularity. In poetry the rhythm is fixed. Each

line has a fixed number of stresses; and the whole poem has a regular system of recurrences, a fixed rhythm, which is called meter. Prose, on the other hand, is unmetrical; its rhythm is not fixed. But though it must be unmetrical, it may be rhythmical; it may add to the suggestions of concrete imagery or of elegant precision the suggestions of rhythm. Thus we often speak of an emotional prose passage as rapid or slow, sonorous, monotonous, smooth, or abrupt; and in every such case we are speaking of its rhythm. We mean that there is adaptation to feeling in the very sound of the sentences.

In prose and verse alike, the adaptation of sound to feeling may be gained by imitative words, such as *clash*, *roar*, *whizz*, *hiss*, *boom*. Though such words are comparatively few, and their frequent use would be childish, we may without direct imitation use words whose sounds harmonize with the sense and the feeling. The phrase *drums and trappings*, without imitation, suggests soldiers marching. Dickens's *Miss Peecher, cherry-cheeked and tuneful of voice*, sounds like the twittering of a bird. Newman's description of surf is suggestive both by the sound of the separate words and by the rhythm:

. . . those graceful, fan-like jets of silver upon the rocks, which slowly rise aloft like water spirits from the deep, then shiver, and break, and spread, and shroud themselves, and disappear in a soft mist of foam; nor of the gentle, incessant heaving and panting of the whole liquid plain; nor of the long waves, keeping steady time, like a line of soldiery, as they resound upon the hollow shore.

— NEWMAN, *Historical Sketches*, I., iii.

For the longer, smoother, and statelier rhythms, verse and prose alike depend largely upon Latin derivatives¹ which are appropriate alike to deliberate movement and to deliberative mood.

¹ Part I., pages 139–146.

We were now treading that illustrious island which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge and the blessings of religion. To abstract the mind from all local emotion would be impossible if it were endeavored, and would be foolish if it were possible. Whatever withdraws us from the power of our senses, whatever makes the past, the distant, or the future predominate over the present, advances us in the dignity of thinking beings. Far from me and from my friends be such frigid philosophy as may conduct us indifferent and unmoved over any ground which has been dignified by wisdom, bravery, or virtue. The man is little to be envied whose patriotism would not gain force upon the plain of Marathon, or whose piety would not grow warmer among the ruins of Iona.

—JOHNSON, *A Journey to the Western Islands of Scotland, Icolmkill.*

Again, verse and prose alike may use alliteration (page 379), or enhance an effect of slowness, lingering, or heaviness, by syncope (page 382). The main difference is that prose rhythms are freer. Prose is not only unmetrical; it also permits a longer succession of unstressed syllables. Between two stresses verse can rarely have more than two unstressed syllables; prose very often has three, or even four. To consider such details in the writing of ordinary prose would probably lead to affectation and feebleness; but to read fine prose aloud with this view increases the appreciation of literature. For practical purposes of revision, the main consideration of rhythm is sentence emphasis. The rule that a sentence should end with its most significant word arises from the fact that at the end of the sentence the voice falls naturally and then pauses. If we put into this place the word most important for carrying on the thought of the paragraph, we make the rhythm serve the sense. If, on the contrary, we put there some less important part, we lose an opportunity. If finally we put

there some phrase that merely fills out the rhythm, we sacrifice sense to sound. This last is the cause of bombast or padding. For redundancy, the use of more words than are demanded by the sense, arises very often from the natural tendency to carry the rhythm to a full close, to fill out the cadence; and the corresponding remedy is so to recast the whole sentence, by bringing the important word to the end, that sound and sense may be satisfied at once.¹

Observe in the following how the cadence of each sentence at once chimes with the feeling and marks the word that is significant for carrying forward the thought:

It is now sixteen or seventeen years since I saw the Queen of France, then the Dauphiness, at Versailles; and surely never lighted on this orb, which she hardly seemed to touch, a more delightful vision. I saw her just above the horizon, decorating and cheering the elevated sphere she just began to move in; glittering like the morning star, full of life, and splendor, and joy. Oh! what a revolution! and what a heart must I have to contemplate without emotion that elevation and that fall! Little did I dream when she added titles of veneration to those of enthusiastic, distant, respectful love, that she should ever be obliged to carry the sharp antidote against disgrace concealed in that bosom; little did I dream that I should have lived to see such disasters fallen upon her in a nation of gallant men, in a nation of men of honor and of cavaliers. I thought ten thousand swords must have leaped from their scabbards to avenge even a look that threatened her with insult. But the age of chivalry is gone. That of sophisters, economists, and calculators, has succeeded; and the glory of Europe is extinguished for ever. Never, never more, shall we behold that generous loyalty to rank and sex, that proud submission, that dignified obedience, that subordination of the heart, which kept alive, even in servitude itself, the spirit of an exalted freedom. The unbought grace of life, the cheap defence of na-

¹ See Part I., pages 187-191.

tions, the nurse of manly sentiments and heroic enterprise, is gone! It is gone, that sensibility of principle, that chastity of honor, which felt a stain like a wound, which inspired courage whilst it mitigated ferocity, which ennobled whatever it touched, and under which vice itself lost half its evil, by losing all its grossness.

— BURKE, *Reflections on the Revolution in France*.

Observe also in this passage the use of Latin derivatives to give a dignified and sustained rhythm, and the variety of the sentences (page 393) in length and form. Notice the marked and appropriate rhythm, and the incidental alliteration, in such clauses as *I thought ten thousand swords must have leaped from their scabbards*. The whole paragraph should be read aloud to mark its cadences.

Rapidity. — In revising our own prose to enhance the suggestion of feeling, rhythm may without affectation be considered definitely in its application to the length of sentences. By reading our descriptions aloud we may quite simply adapt the length of the sentences to the quickness or slowness of the action and to the agitation or tranquillity of the mood. Generally, short sentences are better to express haste, suddenness, or tumult; long sentences to express deliberation or calm.

The sea, the atmosphere, the light, bore each an orchestral part in this universal lull. Moonlight and the first timid tremblings of the dawn were by this time blending; and the blendings were brought into a still more exquisite state of unity by a slight silvery mist, motionless and dreamy, that covered the woods and fields, but with a veil of equable transparency. Except the feet of our own horses, which, running on a sandy margin of the road, made but little disturbance, there was no sound abroad. In the clouds and on the earth prevailed the same majestic peace; and, in spite of all that the villain of a schoolmaster has done for the ruin of our sublimer thoughts, which are the thoughts of our infancy, we still believe in no such nonsense as a limited atmosphere.

Whatever we may swear with our false feigning lips, in our faithful hearts we still believe, and must forever believe, in fields of air traversing the total gulf between earth and the central heavens. Still, in the confidence of children that tread without fear *every* chamber in their father's house, and to whom no door is closed, we, in that Sabbatic vision which sometimes is revealed for an hour upon nights like this, ascend with easy steps from the sorrow-stricken fields of earth upwards to the sandals of God.

— DE QUINCEY,

The English Mail-Coach, The Vision of Sudden Death.

The reading of this passage aloud reveals a rhythmical rise and fall. Not the fixed rhythm of meter, it is nevertheless felt as we read. It heightens our sympathy with the mood of peace; and it naturally becomes plainer, though never metrical, as the feeling of peace expands to the feeling of faith at the close. The delicate adaptation of sound to feeling is due partly to the choice of those longer, smoother words that we have from the Latin; it is due partly to unobtrusive alliteration (page 379); but the impression of calm is given mainly by a certain even rise and fall of rhythm in long, deliberate sentences. When this mood is broken, the sentences break accordingly. The rhythm changes:

What could be done — who was it that could do it — to check the storm-flight of these maniacal horses? Could I not seize the reins from the grasp of the slumbering coachman? . . . The sounds ahead strengthened, and were now too clearly the sounds of wheels. Who and what could it be? Was it industry in a taxed cart? Was it youthful gaiety in a gig? Was it sorrow that loitered, or joy that raced?

The more rapid effect of breaking the rhythm by short sentences is felt in Thackeray's description of the excitement in Brussels during the battle of Waterloo:

The merchants closed their shops, and came out to swell

the general chorus of alarm and clamor. Women rushed to the churches, and crowded the chapels, and knelt and prayed on the flags and steps. The dull sound of the cannon went on rolling, rolling. Presently carriages with travelers began to leave the town, galloping away by the Ghent barrier. The prophecies of the French partisans began to pass for facts. "He has cut the armies in two," it was said. "He is marching straight on Brussels. He will overpower the English, and be here to-night."

— THACKERAY, *Vanity Fair*, Chapter xxxii.

In choice of words this description is not very striking. The effect of tumult is due almost entirely to the length and form of the sentences. The shorter, unconnected sentences of the following description are more fully adapted to the agitation of strong feeling. The abrupt, broken rhythm helps us feel the tumult of a young father as he rushes out into the forest and the storm:

He left the high road and pierced into the forest. His walk was rapid. The leaves on the trees brushed his cheeks, the dead leaves in the dells noised to his feet. Something of a religious joy, a strange, sacred pleasure, was in him. By degrees it wore. He remembered himself; and now he was possessed by a proportionate anguish. A father! He dared never see his child. . . . The ground began to dip. He lost sight of the sky. Then heavy thunder-drops struck his cheek. The leaves were singing. The earth breathed. It was black before him and behind. All at once the thunder spoke. The mountain he had marked was bursting over him. Up started the whole forest in violent fire.

— GEORGE MEREDITH, *The Ordeal of Richard Feverel*, Chapter xliii.

To combine these detached statements into more logical sentences would much mar the impression; for it would make the sentence-movement, or rhythm, slower and more deliberate.

When he left the high road and pierced into the forest with rapid walk, the leaves on the trees brushed his cheek, and the

dead leaves in the dells noised to his feet. That something of religious joy within him, that strange and sacred pleasure, wore by degrees until, remembering himself, he was possessed by a proportionate anguish. Though he was a father, he dared never see his child. . . . As the ground began to dip until he lost sight of the sky, while the heavy thunder-drops that sang in the leaves struck his cheek, the earth breathed out of the blackness before and behind him. When, as if with the bursting over him of the mountain he had marked, the thunder spoke all at once, the whole forest started up in violent fire.

Try the effect of combining thus the short, detached sentences of the following:

Gerard looked wildly down. He was forty feet from the ground. Death below. Death moving slow but sure on him in a still more horrible form. His hair bristled. The sweat poured from him. He sat helpless, fascinated, tongue-tied.

As the fearful monster crawled, growling towards him, incongruous thoughts coursed through his mind: Margaret, — the Vulgate, where it speaks of the rage of a she-bear robbed of her whelps, — Rome, — eternity.

The bear crawled on. And now the stupor of death fell on the doomed man. He saw the opened jaws and bloodshot eyes coming, but in a mist.

As in a mist he heard a twang. He glanced down. Denys, white and silent as death, was shooting up at the bear.

— CHARLES READE, *The Cloister and the Hearth*, Chapter xxiv.

Agitation, then, and swift or sudden action, are naturally suggested by short sentences; for these give the impression of abruptness by preventing any sustained rhythm. Calm, revery, slowness, and the like are naturally suggested by long sentences; for these, by necessitating subordination, are more deliberate, and they give opportunity for sustaining a rhythm evenly.

Revise the themes written at page 375 above, in order to

increase their suggestiveness by adaptation of the sentences to the action and mood.

On the platform of a country railroad station at a hot summer noon idlers are sitting and chatting quietly. The telegraph instrument clicks, a locust buzzes in a roadside tree, and the brook swirls gently. The heat makes waves in the air. With these details, and others of your own choosing, describe the scene so as to give an impression of lazy quiet. Then describe the sudden coming of an excursion train and the excitement on the platform. Revise the theme so as to enhance the impression of quiet and indolence in the first part by long, deliberate sentences, and the impression of bustle in the latter part by short sentences, with exclamation and dialogue.

With like adaptation of sentences, describe children quietly making mud pies in a remote country road, and then suddenly dispersed by an automobile.

Describe the scene at a wharf on a still night, the coming of the steamboat, the making fast, the unloading of freight, the departure of the boat.¹

Variety. — But the very freedom of prose rhythm naturally demands variety. A series of sentences keeping about the same length soon becomes tiresome by its monotony. Still more monotonous is a series keeping, not only the same length, but the same form. The sentence-form most likely to offend in this particular is the compound. Thus there are reasons of rhythm, as well as of logic, for revising into the complex form all sentences that are improperly compound.² And in general, reading aloud will sometimes suggest the combination of two sentences in one, or the breaking of one into two, for the sake of variety. Variety of style is almost entirely an affair of the form and length of sentences.

Of the following passages from Macaulay's History of England,

¹ See Part I., pages 206-211.

² Part I., pages 8-9, 185-186.

the first, by the monotony and abruptness of the sentences, jars upon the impression of pathos suggested by the incidents and the words; the second, on the other hand, moves in tune with the action and at the same time has greater variety of sentence-form:

(a) 'Hampden, with his head drooping, and his hands leaning on his horse's neck, moved feebly out of the battle. The mansion which had been inhabited by his father-in-law, and from which in his youth he had carried home his bride Elizabeth, was in sight. There still remains an affecting tradition that he looked for a moment towards that beloved house, and made an effort to go thither to die. But the enemy lay in that direction. He turned his horse towards Thame, where he arrived almost fainting with agony. The surgeons dressed his wounds. But there was no hope. The pain which he suffered was most excruciating. But he endured it with admirable firmness and resignation. His first care was for his country. He wrote from his bed several letters to London concerning public affairs, and sent a last pressing message to the headquarters, recommending that the dispersed forces should be concentrated. When his public duties were performed, he calmly prepared himself to die. He was attended by a clergyman of the Church of England, with whom he lived in habits of intimacy, and by the chaplain of the Buckinghamshire Green-coats, Dr. Spurton, whom Baxter describes as a famous and excellent divine.

(b) Sir Roger Langley answered "Not guilty!" As the words passed his lips, Halifax sprang up and waved his hat. At that signal, benches and galleries raised a shout. In a moment ten thousand persons, who crowded the great hall, replied with a still louder shout, which made the old oaken roof crack; and in another moment the innumerable throng without set up a third huzza, which was heard at Temple Bar. The boats which covered the Thames gave an answering cheer. A peal of gunpowder was heard on the water, and another, and another: and so, in a few moments, the glad tidings were flying past the Savoy and the Friars to London Bridge, and to the forest of masts below. As the news spread, streets and squares, market-places and coffee-houses, broke forth into acclamations. Yet were the acclama-

tions less strange than the weeping. For the feelings of men had been wound up to such a point that at length the stern English nature, so little used to outward signs of emotion, gave way, and thousands sobbed aloud for very joy.

Read aloud the following passages to study and compare their rhythm in general, and in particular the variety in sentence-length and sentence-form:

(c) The poetry of Milton differs from that of Dante as the hieroglyphics of Egypt differed from the picture-writing of Mexico. The images which Dante employs speak for themselves; they stand simply for what they are. Those of Milton have a signification which is often discernible only to the initiated. Their value depends less on what they directly represent than on what they remotely suggest. However strange, however grotesque may be the appearance which Dante undertakes to describe, he never shrinks from describing it. He gives us the shape, the color, the sound, the smell, the taste; he counts the numbers; he measures the size. His similes are the illustrations of a traveler. Unlike those of other poets, and especially of Milton, they are introduced in a plain, business-like manner, not for the sake of any beauty in the objects from which they are drawn, not for the sake of any ornament which they may impart to the poem, but simply in order to make the meaning of the writer as clear to the reader as it is to himself. The ruins of the precipice which led from the sixth to the seventh circle of hell were like those of the rock which fell into the Adige on the south of Trent. The cataract of Phlegethon was like that of Aqua Cheta at the monastery of St. Benedict. The place where the heretics were confined in burning tombs resembled the vast cemetery of Arles.

—MACAULAY, *Essay on Milton*, ¶ 32.

(d) The last cause of this disobedient spirit in the colonies is hardly less powerful than the rest, as it is not merely moral, but laid deep in the natural constitution of things. Three thousand miles of ocean lie between you and them. No contrivance can prevent the effect of this distance in weakening government. Seas roll, and months pass, between the order and the execution; and

the want of a speedy explanation of a single point is enough to defeat a whole system. You have, indeed, winged ministers of vengeance, who carry your bolts in their pounces to the remotest verge of the sea. But there a power steps in that limits the arrogance of raging passions and furious elements, and says, "So far shalt thou go, and no farther." Who are you that you should fret and rage and bite the chains of nature? Nothing worse happens to you than does to all nations who have extensive empire; and it happens in all the forms into which empire can be thrown. In large bodies, the circulation of power must be less vigorous at the extremities. Nature has said it. The Turk cannot govern Egypt, and Arabia, and Curdistan, as he governs Thrace; nor has he the same dominion in Crimea and Algiers which he has at Brusa and Smyrna. Despotism itself is obliged to truck and huckster. The Sultan gets such obedience as he can. He governs with a loose rein, that he may govern at all; and the whole force and vigor of his authority in his center is derived from a prudent relaxation in all his borders. Spain in her provinces is, perhaps, not so well obeyed as you in yours. She complies, too; she submits; she watches time. This is the immutable condition, the eternal law, of extensive and detached empire.

—BURKE, *Conciliation with America*, ¶ 44.

(e) The poor, forsaken girl, on the contrary, drank not herself from the cup of rest which she had secured for France. She never sang together with the songs that rose in her native Domrémy as echoes to the departing steps of invaders. She mingled not in the festal dances at Vaucouleurs which celebrated in rapture the redemption of France. No! for her voice was then silent; no! for her feet were dust. Pure, innocent, noble-hearted girl! whom, from earliest youth, ever I believed in as full of truth and self-sacrifice, this was amongst the strongest pledges for *thy* truth, that never once — no, not for a moment of weakness — didst thou revel in the vision of coronets and honour from man. Coronets for thee! Oh no! Honours, if they come when all is over, are for those that share thy blood. Daughter of Domrémy, when the gratitude of thy king shall awaken, thou wilt be sleeping the sleep

of the dead. Call her, King of France, but she will not hear thee! Cite her by thy apparitors to come and receive a robe of honour, but she will be found *en contumace*. When the thunders of universal France, as even yet may happen, shall proclaim the grandeur of the poor shepherd girl that gave up all for her country, thy ear, young shepherd girl, will have been deaf for five centuries. To suffer and to do, that was thy portion in this life; that was thy destiny; and not for a moment was it hidden from thyself. Life, thou saidst, is short; and the sleep which is in the grave is long! Let me use that life, so transitory, for the glory of those heavenly dreams destined to comfort the sleep which is so long. This pure creature — pure from every suspicion of even a visionary self-interest, even as she was pure in senses more obvious — never once did this holy child, as regarded herself, relax from her belief in the darkness that was travelling to meet her. She might not prefigure the very manner of her death; she saw not in vision, perhaps, the aerial altitude of the fiery scaffold, the spectators without end on every road pouring into Rouen as to a coronation, the surging smoke, the volleying flames, the hostile faces all around, the pitying eye that lurked but here and there, until nature and imperishable truth broke loose from artificial restraints; — these might not be apparent through the mists of the hurrying future. But the voice that called her to death, *that* she heard for ever.

(f) The shepherd girl that had delivered France — she, from her dungeon, she, from her baiting at the stake, she, from her duel with fire, as she entered her last dream — saw Domrémy, saw the fountain of Domrémy, saw the pomp of forests in which her childhood had wandered. That Easter festival which men had denied to her languishing heart — that resurrection of spring-time, which the darkness of dungeons had intercepted from *her*, hungering after the glorious liberty of forests — were by God given back into her hands as jewels that had been stolen from her by robbers. With those, perhaps (for the minutes of dreams can stretch into ages), was given back to her by God the bliss of childhood. By special privilege, for *her* might be created, in this farewell dream, a second childhood, innocent as the first; but not, like *that*, sad with the gloom of a fearful mission in the rear. This mission had now

been fulfilled. The storm was weathered, the skirts even of that mighty storm were drawing off. The blood that she was to reckon for had been exacted; the tears that she was to shed in secret had been paid to the last. The hatred to herself in all eyes had been faced steadily, had been suffered, had been survived. And in her last fight upon the scaffold she had triumphed gloriously; victoriously she had tasted the stings of death. For all, except this comfort from her farewell dream, she had died — died amidst the tears of ten thousand enemies — died amidst the drums and trumpets of armies — died amidst peals redoubling upon peals, volleys upon volleys, from the saluting clarions of martyrs.

— DE QUINCEY, *Joan of Arc*, ¶ ¶ 1 and 31.

CHAPTER X

THE FORMS OF COMPOSITION IN LITERATURE

Themes in connection with this chapter are indicated in the text. In general they are of two kinds, either criticism or imitation; but they review incidentally many of the studies assigned throughout the whole book and should suggest further review by practice. The text, a brief review of literature from the point of view of composition, is intended to show how writing may help reading, and to give outlook for both.

1. THE TWO FIELDS OF COMPOSITION

We have seen that the four kinds, or processes, of writing and speaking are *argument* to convince, *exposition* to explain, *narration* to tell a story, *description* to suggest a scene, and that these four kinds naturally go in pairs, exposition with argument, description with narration. For composition has two great fields. Writing and speaking have two main objects, clearness and interest, information and suggestion, appeal to reason and appeal to imagination, business and pleasure. Though these objects are not incompatible, though we may even pursue both in the same composition, still one or the other will be our main concern. And according to this main object, according as business or pleasure is the more important, we adjust the form of the whole. When the main concern is to inform or prove, to expound or argue, the composition is planned by paragraphs; when the main concern is to stir the imagination, to tell a story or describe, paragraphs are ignored. Indeed, all writing and

speaking may be practically divided into that which is composed in paragraphs and that which is not. Exposition and argument may, indeed should, have concrete descriptive detail; but the outline, the form of the whole, is determined by paragraphs. Narration, in some cases, may stop to explain or argue; but the plan of the whole story is not determined by paragraphs. Thus in a broad, general way the paragraph may be called the sign of structure. By paragraphs we carry on the ordinary business of writing for clearness; the pleasure of writing, the appeal to imagination for interest, we carry on without paragraphs.

Review in Part I. the openings of the first four chapters; in Part II., pages 261-265, 312, 340-341. Apply these to expand the summary statements of the preceding paragraph into a connected oral explanation of about five minutes, with examples drawn from your own reading and your own themes. Write this out afterwards as an essay.

Write two short themes on the same topic — one of the following, or one of your own choice — (a) an exposition (or argument), (b) a description (or narrative):

Our Suburban Trolley. Freight-handling at the Terminal.
The ——— Amusement Park. "Fresh-air" Children.
Tennis.

This broad distinction is so fundamental that it runs throughout literature. First, it divides literature by time. In English, as in every other language, the literature of reason, composed in paragraphs, is later than the literature of imagination. Early literature, being imaginative, has almost always some sort of narrative structure. It is poetry, not prose; for strong feeling moves it to regular rhythms, and the people has not yet thought out the logical relations of connected prose. For the same general reason its structure is narrative. It is a literature, not of thought, but of feeling; not of ideas, but of images. Prose literature,

when it arises, follows at first the steps of poetry in being mainly narrative. The prose of thought, reasoning by paragraphs, finds its way into the literature of any nation much later. In English, for instance, there is very little prose of this kind in literature before the beginning of the modern age in the fifteenth century. Meantime the way for it has been prepared by public speaking. In sermons and other speeches a prose of orderly, logical exposition is gradually developed until it is brought to literary achievement when the time and the language are ripe.

2. THE PRIMARY FORMS OF COMPOSITION IN LITERATURE

The object of literature, as of the other arts, is to reveal life. What the mass of men is too dull to see or feel, the artist, whether in words or in colors, makes significant. He interprets life to us, makes us see and feel more keenly. In pursuing this common object of all literature, writers have followed or modified from age to age, through many varieties of personal expression, certain great types, or literary forms. The primary forms, that is the earlier and simpler, are *epic* and *romance*, *lyric*, and *drama*, — all, as has been said, within the general field of narrative and description. The only form within the other field is *oratory*; and even this, in the earlier periods, often uses narrative. The secondary forms, that is the later, derivative forms, are *essay*, *novel*, and *short story*. Of these, only the first is within the field of logic. The other two are special developments of the primary forms of narrative. Thus literature, from beginning to end, speaks oftenest to the imagination in some form of narrative. Whereas our ordinary composition for the business ends of life goes on by paragraphs, literature naturally adopts some form of story or description.

Instead of ideas in paragraphs about life, it oftenest gives us scenes from life itself. To write about life, to explain it in greater scope or smaller, with large view or in the details of daily business, — that is what composition means to most of us at most times; to write life, as it were, to interpret it by such forms as shall stir the imagination and feeling through some sort of imitation, — that is literature. Though the boundary is readily crossed, though literary artists write essays in paragraphs and common men tell stories, nevertheless the narrative development is far oftener used for literature and the paragraph development for business. Thus the historical succession of literary forms shows at once that development by paragraphs is late in literature and that it has comparatively little space. For literature tries far less often to discuss life than to reveal it. In studying the forms of literature we too are studying how to reveal life within our capacity and our influence, how to tell the stories of life that touch us in such ways as to make them interesting and significant to others. Without pretensions to literary eminence, we may achieve some degree of literary interest, and we shall surely sharpen our appreciation. To this end, let us examine in turn each of the great typical forms.

Epic: the Realization of Life. — *Epic*, the earliest narrative literature, is full of inspiration to interest in writing from its vivid realization of life in concrete details. Epic is full of the joy of living and doing. Such reflections on life as it contains are few, brief, and simple. Rather it aims, not to reflect on life, but to reflect life. The difference is sometimes expressed by the words *subjective*, relating to the writer, and *objective*, relating to the external world apart from the writer. Epic is very objective. It tells us, not what the poet thought or felt about his world, but how his world sounded and looked and moved. It expresses not

so much the poet as the life about him. Its peculiar pleasure in the reading and its lesson for writing, is the vivid force of concreteness, the stirring of imagination by words of physical sensations. Thus we realize with extraordinary distinctness the life of the Homeric age, and sympathize with the strong, simple emotions of its men and women.

THE SON OF ODYSSEUS AND THE SON OF NESTOR CLAIM HOSPITALITY OF MENELAOS

Then, greeting the pair, said light-haired Menelaos:

"Take food, and have good cheer! and after you have enjoyed your meal, we will inquire what men you are." . . . So saying, he set before them fat slices of a chine of beef, taking up in his hands the roasted flesh which had been placed before him as the piece of honor; and on the food spread out before them they laid hands. But after they had stayed desire for drink and food, Telemachos said to Nestor's son, his head bent close that others might not hear: "O son of Nestor, my heart's delight, observe the blaze of bronze throughout these echoing halls, the gold, the amber, silver, and ivory! The court of Olympian Zeus must be like this within. What untold wealth is here! I am amazed to see."

What he was saying light-haired Menelaos overheard, and speaking to them in winged words he said: "Dear children, surely mortal man could never vie with Zeus. Eternal are his halls and his possessions. But one of humankind to vie with me in wealth there may or may not be. Through many woes and wanderings I brought it in my ships, and I was eight years on the way. Cyprus, Phœnicia, Egypt, I wandered over. I came to the Ethiopians, Sidonians, and Erebbians, and into Libya, where the lambs are full-horned at their birth. Three times within the ripening year the flocks bear young. No master nor herdsman there lacks cheese, meat, or sweet milk, but the ewes always give their milk the whole year round . . . Yet in my grief it is not all I so much mourn as one alone, who makes me loathe my sleep and food when I remember him; for no Achaian met the struggles that Odysseus

met and won. Therefore on him it was appointed woe should fall, and upon me a ceaseless pang because of him; so long he tarries, whether alive or dead we do not know. Doubtless there mourn him now the old Laertes, steadfast Penelope, and Telemachos, whom he left a new-born child at home."

So he spoke, and stirred in Telemachos yearnings to mourn his father. Tears from his eyelids dropped upon the ground when he heard his father's name; and he held with both his hands his purple cloak before his eyes.

— HOMER, *Odyssey*, iv. 59, Palmer's prose translation.

The richness of specific concrete detail makes us enter into the scene and feel the boyish admiration of Telemachus and the garrulous pride and grief of Menelaus in their very way of speaking.

ODYSSEUS SWIMS ASHORE FROM THE SHIPWRECK

Odysseus swam onward, being eager to set foot on the strand. But when he was within earshot of the shore, and heard now the thunder of the sea against the reefs — for the great wave crashed against the dry land belching in terrible wise, and all was covered with foam of the sea, — for there were no harbors for ships nor shelters, but jutting headlands and reefs and cliffs; then at last the knees of Odysseus were loosened and his heart melted, and in his heaviness he spake to his own brave spirit:

"Ah me! now that beyond all hope Zeus hath given me sight of land, and withal I have cloven my way through this gulf of the sea, here there is no place to land on from out of the grey water. For without are sharp crags, and round them the wave roars surging, and sheer the smooth rock rises, and the sea is deep thereby, so that in no wise may I find firm foothold and escape my bane; for as I fain would go ashore, the great wave may haply snatch and dash me on the jagged rock, and a wretched endeavor that would be."

— HOMER, *Odyssey*, v. 410, Butcher and Lang's prose translation.

Even so English epic makes us realize the land and the life of the old English heroes:

THE LANDING OF BEOWULF

Straightway they went.	The warship waited still;
bode near the beach	the broad-stretched bark,
safe at anchor.	Shone the boar-images
over their cheek-guards,	chiseled in gold;
fair and fire-hard,	fended them from foes.
Warlike went they;	warriors, they hasted,
kept their company	till they might catch glimpses
of the royal roof-tree,	all rich with gilding.
That was foremost	for folk of earth
of houses under heaven.	In it Hrothgar bode.
Lightened its light	over lands a many.

The street was stone-set,	straight leading them,
goodmen together.	Glittered their mail;
hard, hand-locked,	the hammered rings
sang in the steel	as on they strode to Heorot,
in their grimly garnished	gear approaching.
Sea-tired, they set	their spacious shields,
targets terrible,	by the towering wall.
Bent they to benches;	byrnies clattered,
heroes' harness.	Huddled together,
stood their spears,	the seafarers' weapons,
ashen, tipped with grey.	

— *Beowulf*, 301-330.¹

Review Part I., pages 32-35, 45, 109-116, 146-151; Part II., pages 329-340, to prepare a connected oral exposition of the force of concreteness.

Write with epic fullness of specific concrete detail a short theme on each of several topics following. The topics presuppose a crowd or company in sympathy with the actions of their leader or their representatives; for the larger epic interest is the communal interest in heroes. Epic is full of local pride. Write as one of an enthusiastic crowd.

¹The translation follows the rhythm and the alliteration of the original.

1. *The End of the Second Half.* A hard-fought football game has been played to a tie. One of the players having been exhausted, a substitute is put in. An excellent player, and very popular, he has been kept out of the game by illness. Describe his reception as he comes on the field. By a clever and daring play he wins the game.

2. *The Choice of the People.* A crowd comes to congratulate a strong and fearless leader on his election to ———. Coming out on the porch, he thanks his friends and pledges his best endeavor. Try to give the impression of the enthusiasm and love of the crowd.

3. *The Clam-bake, barbecue, barn-dance, or other local celebration* gathering a crowd of neighbors in common feasting and mirth.

4. *The Coast-guard.* A retired veteran life-saver in an anxious crowd on the beach comments on the heroic efforts of his old corps as they venture and toil to save the crew of a fishing schooner wrecked within sight of home.

5. *How We Won the Race.*

6. *The Return of the Regiment.*

7. *News of Battle.*

8. *Custer's Last Fight*, as told by a survivor.

Write an essay on National Songs (*America, The Star-Spangled Banner, Die Wacht am Rhein, La Marseillaise*, etc.), showing how they express national pride in national history and the spirit of common loyalty. Do you find the same feeling in *Maryland, My Maryland, Dixie, The Song of the English*? In ballads and similar poems; e.g., *Chevy Chase, Agincourt, The Charge of the Light Brigade, Sheridan's Ride*?

Romance: the Idealization of Life. — To the early epic literature succeeded the medieval literature of *romance*. In romance story-telling took a new turn. Whether in prose or in verse, the medieval romances rely no longer on local pride and on distinctness of characterization. All the best romances passed so readily from nation to nation that the heroes became in literature mere types of the manly virtues

then most admired in all nations, — bravery of course, devotion in love, courtesy, — in a word, chivalry. Springing from courtly love-stories and popular fairy-stories, the medieval romances appealed to a new interest in adventure. The interest of a romance is in wondering what difficulty or marvel the knight will encounter next, and how he will prevail. Thus romance brought into story-telling the interest of extraordinary situations, of such situations as we like to imagine, not because we meet them in real life, but just because we do not meet them. Romance is the literature of adventure and dreams. For reading, it has the interest of sweet fancy or noble imagination; for writing, it has the lesson of the value of plot, or narrative structure, of holding attention from situation to situation and satisfying it by a happy issue (see pages 355-363).

This romantic interest in plot is rarely sustained through a whole long romance; for a long medieval romance, such as that of King Arthur, is usually a compilation of several separate stories. But it is present to a greater or less degree in each of these component stories, such as *Tristram and Yseult* and *Sir Perceval of Galles* (Wales); and it is quite marked in some of the shorter romances that were not combined with others, such as *Havelok the Dane* and *Gawain and the Green Knight*. Some of these were shaped to hold a keen interest by suspense and solution (page 360). The same way of heightening narrative interest by narrative form appears in Chaucer's tale of the *Pardoner*; it was kept before the common people by the oral transmission of ballads (page 342 and foot-note); and it adds much to the popularity of Scott's *Lady of the Lake* and *Marmion*.

Show orally how a good fairy-story (*Cinderella*, *Hop o' My Thumb*, etc.) is arranged to heighten interest by suspense up to a climax, and to satisfy it at the end.

Exemplify orally from some interesting story with which you

are familiar the meaning of the common saying "the plot thickens."

Show orally how Tennyson's version of the romance of *Gareth and Lynette* is arranged to hold and increase interest. Comment in the same way on Scott's *Lady of the Lake* (What, for instance, is the effect of Murdoch's whoop in Canto iv.?) or *Marmion*.

Lyric: the Cry of Life. — Epic always, and usually romance, hides its author. His name, if we know it at all, is only a name. He has revealed himself only by that view of life which runs through his writings. He has not wished to utter his own loves or griefs. But the poetry that does utter the author's love and grief, the poetry of personal feeling, arose in all literatures early. It is called *lyric*, or song. Poetry it is naturally, not only because it arose early, but because it expresses strong personal feeling. The stronger and more personal the feeling, the more rhythm tends toward meter. And the name lyric, from lyre, the Greek harp, marks it further as musical. Most early poetry was probably chanted; but lyric is song in the more special sense of having usually such shorter, smoother rhythms, and such brevity, as fit it to be sung on occasion. As the poetry of occasion, it shows in the highest degree the adaptation of tone and sound within small space. Of all poetry it is usually the most finished. The effect of spontaneity comes, as in most writing, not from careless facility, but from very careful revision. The lyric impulse must, indeed, be satisfied at once by some expression; but it is by the revision of this first draft that lyric poets have attained their surest effects. This is plain alike from the manuscripts of modern poets and from analysis of the best lyrics of any period. A successful lyric, whether simple or complex, is a fine piece of adaptation.

And lyric reminds us also that expression of strong personal feeling is naturally brief. It can hardly be prolonged

without seeming extravagant or tiresome. Some of the best lyrics have only a few lines; many have only a few stanzas. Lyrics that are prolonged, unless they are rather meditations than songs, hardly hold their effect.

Reviewing pages 383-385, apply the same study to the following, so as to show the adaptation of rhythm and stanza to feeling and the compressed poetic suggestion.

A SONG FOR MUSIC

Weep you no more, sad fountains.
 What need you flow so fast?
 Look how the snowy mountains
 Heaven's sun doth gently waste.
 But my Sun's heavenly eyes
 View not your weeping,
 That now lies sleeping
 Softly, now softly lies
 Sleeping.

Sleep is a reconciling,
 A rest that peace begets.
 Doth not the sun rise smiling,
 When fair at even he sets?
 Rest you, then, rest, sad eyes.
 Melt not in weeping,
 While she lies sleeping
 Softly, now softly lies
 Sleeping.

— *Anon.*

UPON WESTMINSTER BRIDGE

Earth has not anything to show more fair.
 Dull would he be of soul who could pass by
 A sight so touching in its majesty.
 This city now doth like a garment wear
 The beauty of the morning. Silent, bare,

Ships, towers, domes, theatres, and temples lie
 Open unto the fields and to the sky,
 All bright and glittering in the smokeless air.
 Never did sun more beautifully steep
 In his first splendour valley, rock, or hill.
 Ne'er saw I, never felt, a calm so deep.
 The river glideth at his own sweet will.
 Dear God! the very houses seem asleep;
 And all that mighty heart is lying still.

— *Wordsworth.*

A POET'S EPITAPH FOR HIMSELF

Even such is Time, that takes on trust
 Our youth, our joys, our all we have,
 And pays us but with age and dust;
 Who in the dark and silent grave,
 When we have wandered all our ways,
 Shuts up the story of our days.
 But from this earth, this grave, this dust,
 The Lord shall raise me up, I trust.

— *Raleigh.*

Examine in the same way a lyric of your own choice.

Drama : the Representation of Life. — What do we mean when we say "That situation is dramatic"? The word, like epic and lyric, comes from the Greek; and its Greek root means to do, or act. That is dramatic, then, which deals with doing or acting. A drama represents action; a dramatic situation is a situation or a scene involving action. We speak of the action of a play, and of the players as actors.

*Action interesting to an Audience.*¹— Still, this does not distinguish drama from other forms of narration. Almost

¹ The divisions of this section are in the main those suggested in Prof. Brander Matthews's various essays on the drama, especially in his *Development of the Drama*.

all story-telling involves action. A drama is a story put upon the stage. What kind of action is appropriate to representation on a stage before an audience? The clue is in the word representation. A drama does not tell about actions; it represents them. Its situations are not described; they are acted. Now in this regard situations that are much the same in general narrative interest differ very much in dramatic interest. Some we are content to hear or read about; others we should like to see. A dramatic situation is a scene such as we like to see on the stage. Franklin eating bread in the streets of Philadelphia, while his future wife laughs at him from a doorway, — interesting to read about, but not especially interesting to see. Haman coming in his pride before King Ahasuerus to contrive the ruin of the Jews, and bidden to honor the Jew Mordecai (*Esther* vi.), — interesting to read, but how much more interesting to see! How we should like to see Haman's face and attitude! The dialogue between Haman and the king, in which neither comprehends the drift of the other, while we, comprehending both, are all agog for the issue, — how striking that would be on the stage! There evidently is a dramatic situation. The feeling can be suggested by telling about it; but how much more impressive it would be if expressed visibly! Arnold's decision to betray his country, Lincoln's decision to emancipate the slaves, — interesting both; but would they be interesting on the stage? What could the actor do to express the great decision visibly? Merely to seize a pen would seem trivial. Such a situation is hardly dramatic. A dramatic situation is a scene in which the feeling is visibly expressed in some positive and significant action enjoyed by the audience. Drama is made up of such situations as are best expressed by actors before an audience. It is made to be seen. The plays of Shakespeare, admirable as they are for reading, were composed

for the stage. A dramatic situation is a scene interesting to an audience. Even the word *audience* hardly expresses the distinction; for *audience* rather implies hearers. The significant word is *theater*. A *theater* is a place in which to see.

A drama, then, is a composition interesting for an audience to see. Nothing that lacks this particular appeal is really dramatic. Aside from the skill of the actors, on which, of course, every play depends more or less, the merit of a play is fairly measured by its hold upon the people who see it. A play is made, not primarily to be read, though it may also be read with interest, but to be seen. This is the particular end to which its composition must be adjusted. From its very origin, drama has always been in this sense popular. It arises spontaneously from a natural love of acting. "Let's pretend you're a pirate, and I'm a captain in the navy." What child has not taken pleasure of this sort? Many children's games are dramatic; and many of them are centuries old. Centuries old also is Punch and Judy, and well-nigh universal. Either to act oneself, especially if he can play the hero, or to see acting, is a tendency so old and so wide-spread as to seem almost like an instinct.

In the childhood of civilization this instinct for acting was applied to certain popular observances of religion. Greek drama began in the rites celebrated annually by the whole village to honor Dionysus, the god of fertility and enthusiasm. In the shouting, singing chorus there were at first no actors in the modern sense; but that was because in a broader sense all were actors. There was rude, impromptu mimic action, as in "So the farmer sows his seed" and similar games. There was probably a good deal of improvised verse by individuals, and still more probably a good deal of recurring refrain by the whole crowd; for thus began, not only drama, but all poetry. Out of this communal

impersonation at the vintage of the story of Dionysus grew very naturally individual impersonations of the god and his more prominent mythical attendants, the crowd responding with impromptu variations of the familiar refrain. Every crowd produces a leader. The leader of the Greek chorus became an actor in the modern sense of taking a fixed part. In time other fixed parts were assigned to individuals, till the mimic action had a definite dialogue; but the chorus persisted as representative of the whole community.

Then, as always, came the individual genius to discern the capacity of what had been wrought by the people, to reveal and enlarge that capacity, and to fix a great form of art. Æschylus, and after him Sophocles and Euripides, shaped the drama to express the ideals of the Greek race and their own individual genius; but it always remained answerable to its original popular impulse. The Greek throng upon the open seats of the theater under the clear sky during the great period of Greek drama felt, not only that the chorus chanting in the orchestra represented them, but that they themselves were assisting at a communal celebration. The drama was always the enactment of their mythology or history, known to every spectator by heart. It was always judged sternly, not only by its poetic beauty, but by its faithfulness to their beliefs and their feelings. Its success was measured by the feeling of the community.

So in medieval France and England, in a society quite different otherwise, indeed, but similar in communal religious observance and in general ignorance of reading, arose the modern drama. The medieval community center was the church; and the drama arose from the communal observance of the great annual Church festivals. "Whom seek ye?" came the thrilling chant at Easter, when the whole village or city district would be gathered in the parish

church. And then, in further response, "He is not here; He is risen." To make this interlude more impressive, the clergy had it chanted responsively by singers impersonating the angel and the women. So at Christmas there were responses of the angels and the shepherds. These so effectively answered the popular feeling that in time other scenes from the sacred history were thus recited; the custom passed out of the church; and the whole town, through its trade unions, maintained an annual series of dramatic representations, setting all the main scenes of the Bible. Each scene, provided by a separate guild, was mounted on a cart and drawn through the market-place before the church, where the spectators were assembled in the open air. *Miracles*, these series were called, as representing the most dramatic scenes of Revelation; or *Mysteries*, as representing the supernatural truths of the creed. As the separate scenes were represented and combined with better skill, they opened the way for other representations of dramatic scenes from history, and so for the predecessors of Shakespeare. From the beginning, then, modern drama also was a popular performance, developed in response to a popular demand, and always answerable to the people.

In both the ancient development and the modern, mark that the drama was there before it was written, before there was any thought of writing it. The drama is primarily, not a literary product, but a popular product. It began, not as something written by a man of letters and then acted before the people, but as something acted by the people and only afterward written down for preservation. In spite of all differences of time and race, drama has always depended, more than any other form of composition except oratory, upon immediate appeal to the people. Romance and lyric may be enjoyed by oneself apart; but epic and drama are communal. Epic grew out of the hero-songs of

the clan; drama, out of the choral celebration of the village. Since epic early passed out of popular life, drama has been for centuries the only form of literature that people can enjoy together. What spectators as a crowd can watch with sympathetic interest, and feel some share in, — that is properly called dramatic.

What scenes from *Silas Marner* could most readily be adapted to the stage? From *David Copperfield*? From *A Tale of Two Cities*? From *The Vicar of Wakefield*? From another novel of your own choice?

Which of the following stories are best suited for making into plays? Ruth, Joseph and his Brethren, Nathan Hale, Washington at Valley Forge, Major André, Montcalm and Wolfe, The Great Strike at ———, The Boy Who Gave up College to Support his Family. From the stories that you choose, what scenes would you select as particularly dramatic?

Action of Will on Will. — Drama is not only for spectators; it is for actors. It is far more than a tableau. No other form of composition can so vividly reveal the force of personality. And this is revealed most vividly by the crossing and clash of human wills. The whole tissue of drama is the action of persons upon one another; and its main nerve is the conflict of wills. Iago's seduction of Othello is the main line of action by which Cassio is betrayed, Desdemona killed, and Othello ruined. The motive of jealousy works out visibly in strong and subtle action and interaction upon all the main persons. Cassius makes the ambition of Cæsar work upon the patriotism of Brutus; and both alike are thwarted and ruined by the policy of Antony. No mere telling of this story of ambition can give so vivid an impression of these personalities. The book of *Esther* could be readily made into a play because the story hinges upon the clash of two wills, the strong purpose

of Haman and the stronger purpose of Mordecai.¹ Thus the most intense scenes of drama are usually between two; for drama is made of the visible actions of will on will.

Select for comment one of Shakespeare's scenes showing most vividly the action of will on will. (It is well to have a scene or two of this kind acted by students before the class.)

Recast in dramatic dialogue a similar scene from a novel.

Write in dialogue a dramatic scene from real life (200-300 words).

Action Limited in Time and Place. — Drama is not only for spectators and actors; it is for the stage. The very fact that the dramatic representation of life must be made by a few actors on one spot within three hours or less imposes upon drama stricter limits than are necessary for any other form of composition. All the art of the modern theater in shifting scenes cannot do away with this necessity; and in the days of the great playwrights who brought dramatic form to perfection the stage was comparatively bare. In fact, it is the triumph of dramatic composition to give the illusion of life within these strict conditions. To some extent these are the conditions of all story-telling (page 346). In order to tell a story at all, we must limit time and place, and select from the confusion of actual life those situations which are significant. Only thus can we achieve any unity, or singleness of impression. But in drama the selection must be even stricter. There can be no pauses for description or explanation. At every moment the action and dialogue must be significant and decisive. "Something will come of that," the spectator must feel, or his interest is relaxed. Drama reduces the various and dispersed actions of real life to a few critical scenes,

¹The dramatization of this story is sketched in the third chapter of the author's *How to Write, a Handbook Based on the English Bible*.

or turning-points. It reduces the conversation of real life, which is often random and insignificant, to a dialogue of which every sentence has meaning. On the stage whatever is done or said must be significant. Else the play would be interminable, and it would miss its aim, which is interpretation. Drama does not try to reproduce life. That, even if it were possible, would be tiresome. Drama imitates. It represents life by interpreting within a few scenes the significances that in actual experience we might spend years to gather.

Thus the structure of drama may be said to consist in composing dramatic situations in a single, steady course of action within a strictly limited time toward a definite result. These situations the dramatist deliberately chooses out of many; this result and the course leading up to it he deliberately contrives. From his point of view, therefore, drama is artificial. It is the most artificial of all forms in being the most highly simplified, the most strictly compressed. From the throng of daily experiences, confused and apparently insignificant, he chooses what counts for his interpretation, and omits all else. The slow processes of life he forces into the compass of a few hours. The fate of Romeo, the passion of Juliet, is compressed within a single evening. And this is done by contriving a series of highly significant situations in a single, swift course of action.

Yet the drama, as the spectator sees it, is most natural. Unless it creates and keeps an illusion of real life, it fails. A slip that might pass unnoticed in reading becomes flagrant when illumined by the foot-lights. "That will not go," we say; it is "not convincing" or "false," or "unnatural." Thus drama, more clearly than the other forms of composition, shows us that naturalness in writing is the result, not of careless freedom, but of labor, method, art. Composition seems just as natural as it is made to seem, no more.

And drama shows most vividly that art creates the illusion of real life, not by going out with a phonograph and a kinoscope, but by the interpretation that comes from personal selection and combination.

How much time is the action of *She Stoops to Conquer* supposed to cover? *Twelfth Night*, *Much Ado*, *Othello*? (Use instances best known to you.) The history of Greek drama and the conditions of the Greek theater were such as to develop a strict limiting of the time and place covered by the dramatic action. The conditions of English drama were different. But it is important to notice that few of Shakespeare's plays bring the lapse of time to our attention. That generally we do not think of time at all is really the main point. Reviewing pages 346-348, and investigating in the library the so-called "dramatic unities," write an essay on The Lapse of Time in a Play.

Did the Elizabethan theaters have scenery? Was change of scene made behind a curtain, as to-day? How were the scenes managed in a Greek play? Mention a play, old or new, in which all the action takes place on the same spot; a play which changes scene very often or very widely. Work out thus a connected oral exposition of Change of Scene in a Play.

Climax and Conclusion. — In contriving his course of action, the dramatist fixes most distinctly its turning-point, or crisis. This is the core or heart of the play. Everything before is to lead up to this; everything after is to lead down from it to a satisfying conclusion. Thus *Romeo and Juliet*, since it hinges upon Romeo's fatal error in leaving his bride, has for its central scene, or crisis, the parting. *Othello*, turning upon jealousy, has for its central scene the great dialogue in which Iago succeeds in kindling suspicion. This crisis, or turning-point, is usually called the *climax*; but it is not quite like the climax of a story. The climax of a drama is usually, not near the end, but near the middle. Thus the interest is not released; it is merely changed. The

climax in a play is the turning-point. It is that decisive scene in which the hero's fortunes turn, in a comedy, from bad to good; in a tragedy, from good to bad. The climax of *Macbeth* is the banquet scene which marks the height of his power. He has achieved all he sought. Suddenly, with the ghost of Banquo, begins his downward course to ruin. Our interest is not relaxed at this point; it is merely changed. Guessing that doom is approaching, we yet follow its steps eagerly to the end. The difference in this regard between drama and other forms of narrative is that a drama usually works out its conclusion more fully. In a story, especially a short story, the conclusion may be merely suggested; it is left to our imagination. In a drama we like to see it worked out before us. Thus in the *Merchant of Venice*, though at the end of the fourth act we can guess the result, we still enjoy the following scene at Belmont, the honeymoon of Lorenzo and Jessica, the playful reclaiming of the rings, the restoration of Antonio to prosperity. And in most of Shakespeare's plays the conclusion has much more dramatic interest. A play, then, usually aims to satisfy the audience fully at the close.

Point out the crisis, or climax scene, in each of three other plays of Shakespeare. Reviewing page 360, show that the "solution" of a play is usually longer than that of a story. Told as a story to be read, *Julius Caesar*, for instance, might end soon after Antony's speech to the mob; for in that we foresee the doom of Brutus. But for the stage the solution is worked out fully. What is the climax scene of this play? Show how the rest of the play leads up to this, or down from it. The Greek term for the conclusion of a drama, *catastrophe*, meant in this application the subsidence of the action to rest. Is there any analogy between this and the conclusion of a speech?

Dramatic Opening. — Drama begins at once with action. This is common in other forms of story-telling to-day; but

in drama it is necessary always. There can be no introductory explanation. The rise of the curtain discloses people moving and talking. We have no previous knowledge of who they are or of what they are at. All this the dramatist must tell us as soon as possible by what they do and say, while at the same time he carries his main action forward without delay. This is a particular application of his skill in selecting that place and that brief time in which the important situations can happen most naturally and best explain themselves; in other words, it is part of his problem of securing unity by limiting time and place. His very first situation is significant. It catches our interest in these people; it lets us know enough of what has already passed; it gives us exciting hints of what is to come. Before we are aware, the action is in full swing, and we have picked up enough to understand it fully.

Why the prologue and epilogue in *Henry V*? Are there other cases of this in Shakespeare? Give an instance from another dramatist. Does a modern play ever have a prologue? What do we learn from the first scene of a play about the hero, the previous history, and the present situation? With this view examine several other plays. Do you find any significance in the opening lines of *Twelfth Night* and *Macbeth* as setting the tone of the play?

Make a brief plan of acts and scenes for a play of the Bible story of *Esther*. Write out the first scene.

Oratory: Persuasion about Life. — Most oratory lies outside of literature. It belongs to the world of affairs; and, from the very fact that its appeal is oral, it cannot have adequate literary record. Now and then, oftenest in the field of occasional oratory (pages 285–287), arises an orator whose power over men's feelings and originality of personal expression are of a sort to give him literary eminence. But the measure of oratory can never be its eminence among

printed books. Burke, who is deservedly famous in print, was ineffective on the platform. Bunyan's printed sermons, perhaps much changed from their oral form, do not convey that power which he wielded for years over masses of men. From the fact that oratory is meant, not for a book, but for a platform, it cannot be fairly represented in literature. Some of the best speeches must have passed away with the day on which they were uttered. Some of those preserved in print ought to be judged by their aptness to situations that we can hardly reconstruct in imagination. If by literature we mean writing, then oratory, though it is a primary and permanent form of composition, is even less than drama a form of literature. In phrase it has often -- oftener, perhaps, than any other form of composition -- imaginative force and immediate adaptation of sense and sound to mood; but in form it follows the paragraph. For persuasion, which is its field, is the great practical combination of clearness and interest, of logical structure with imaginative appeal. As it goes on logically from paragraph to paragraph, oratory may be almost lyric in the fervor of its diction. Form for reason, words for feeling, -- this is the practical lesson of oratory. The lesson may be applied also to essay-writing; but its main opportunity is in the great form of persuasion. In this field, no writing can quite equal, or ever supersede, public speaking. The printing-press and the telegraph, deeply as they have affected society, have not done away with man's desire to move his fellow-men by the word of his mouth, nor with their desire to hear him. So long as this is true -- and it seems to be a permanent fact of human nature -- oratory will hold its place as the most immediately powerful of all forms of composition.

Reviewing pages 272-287, prepare an oral discourse, with instances of your own choosing, on Training for Oratory. Be sure

that the paragraphs are developed with the fullness necessary to speech-making, and that they are well emphasized.

Write an essay comparing the oratory of Burke with that of Webster.

Show that a sermon has the opportunities and the methods of an occasional speech.

3. THE SECONDARY FORMS OF COMPOSITION IN LITERATURE

Primarily, then, literature gave us in the field of imaginative interest epic, romance, lyric, and drama, and in the field of clear, progressive thought, oratory. After them and from them have been developed in modern times, as secondary forms, essay, novel, and short story.¹ The essay developed from oratory, and especially from sermons and other discourses on morals. The novel, developing from the long romance, derived much from the older epic and from the essay. The short story is a very modern, special, and strict development from the short romance. These three forms, therefore, may be called derivative, or secondary.

Essay : Discussion of Life. — Of all the forms of literature, essay seems at first sight the least definite. The word means merely a trial, or sketch; and the thing has varied in form from Bacon to Addison, and from Lamb to Macaulay. Really the term covers more than one literary form; but it can be divided more surely after taking account of its general meaning. Vague though it is, it nevertheless represents a certain general attitude of mind and method of writing. First, essays of all kinds deal, however variously, with ideas. Their common goal is less to suggest or represent life as it comes to us through our five senses than to comment on life, to explain its underlying principles, to

¹ It is beyond the scope of this book to discuss the modern development of the forms of poetry.

set forth the writer's ideas. However specific and concrete it may sometimes be in detail, its goal is some general, abstract idea, some principle or proposition, in a word, some idea. "Men fear death," says Bacon at the beginning of an essay, "as children fear to go in the dark." This is an idea, a thought, a reasoning from experience. His little essay on *Death*, though it has concrete instances, is planned to set forth certain ideas. So each of Emerson's essays, abundant though some of them are in concrete descriptive detail, sets forth certain ideas concerning *Friendship*, or *Books*, or *Eloquence*, etc. Each has for its goal something abstract and general, not a reflection of life as in a story or play, but a reflection on life. Lowell's essay *On a Certain Condescension in Foreigners* begins with anecdote and abounds in description; but its purpose is to enforce upon the reader his reflections, his ideas, concerning the attitude of foreigners toward our country. Many of Addison's essays, especially the De Coverley papers, are very largely descriptive; but they are habitually led from, or led up to, an abstract idea which serves as a text, or proposition for the whole. Number 107 begins: "The reception, manner of attendance, undisturbed freedom and quiet, which I meet with here in the country has confirmed me in the opinion I always had that the general corruption of manners in servants is owing to the conduct of masters." Number 110 passes from the haunted walk near Sir Roger's house to the general belief in ghosts. Number 112 begins: "I am always very well pleased with a country Sunday, and think, if keeping holy the seventh day were only a human institution, it would be the best method that could have been thought of for the polishing and civilizing of mankind." Of course critical essays, such as Macaulay's, are evidently devoted to the developing of ideas. In general, then, an essay is a discussion of ideas.

This being the object of an essay, its method is generally by paragraphs, as in a speech. As to its form, indeed, an essay might roughly be called a speech in writing; for both proceed generally by paragraphs. The difference between the two is the difference between persuasion and exposition. True, either speech or essay may persuade, and either may expound; but when our main object is persuasion we prefer to speak if we can, and when the main object is explanation we prefer to write. So with the audience. If we are to be stirred, we had rather hear; if we are above all to understand clearly, we had rather read, had rather, as we say, have the thing in black and white. We may revise our general definition, therefore, by calling an essay an exposition of ideas. For the object of an essay is usually more than enumeration of parts, more than statement of facts. An essay aims from the parts to interpret the whole, from the facts to show the underlying principle. An essay proceeds by paragraphs because it is a process of thought. Finally, then, an essay may be defined as an exposition by paragraphs of a single controlling idea.

The Two Kinds of Essay. — On the basis of this definition, essays may be divided into two classes, according as they follow the paragraph method of exposition more or less strictly. When the author's main concern is the underlying idea and the leading of other people to accept it, he casts his essay in the stricter way of exposition by definite, carefully emphasized paragraphs. His paragraphs, though they may be less full, are as definite as those of a speech, and, as in a speech, they are arranged in progressive, logical order. When, on the other hand, the author cares more to show his idea concretely as he sees it at work in life, when, instead of developing it by definite stages, he is content to suggest it, when in other words his aim is rather to interest his readers in it than to reason it out with them, — then he

casts his essay in a looser form. His paragraphs are not so clear-cut as the paragraphs of a speech; for some of them are largely descriptive, and the whole essay has less logical progress. Both classes of essays deal with ideas; but the one reasons them out in a series of expository paragraphs, and the other partly reasons them out and partly suggests them by description. Thus we may divide essays, according to their method of composition, into stricter and looser; and the ear-mark is the handling of the paragraph.

The stricter, expository type is clear in Bacon, our first great essayist and still among our greatest.

OF CEREMONIES AND RESPECTS¹

He that is only real had need have exceeding great parts of virtue, as the stone had need to be rich that is set without foil. But if a man mark it well, it is in praise and commendation of men as it is in gettings and gains. For the proverb is true, that light gains make heavy purses; for light gains come thick, whereas great come but now and then. So it is true that small matters win great commendation, because they are continually in use and in note, whereas the occasion of any great virtue cometh but on festivals. Therefore it doth much add to a man's reputation, and is, as Queen Isabella said, like perpetual letters commendatory, to have good forms. To attain them it almost sufficeth not to despise them; for so shall a man observe them in others, and let him trust himself with the rest. For if he labour too much to express them, he shall lose their grace, which is to be natural and unaffected. Some men's behaviour is like a verse wherein every syllable is measured. How can a man comprehend great matters that breaketh his mind too much to small observations? Not to use ceremonies at all is to teach others not to use them again, and so diminish respect to himself. Especially they be not to be

¹ *i.e.*, *On Etiquette and Observances*. For the obsolete meanings of other words in this essay consult a large dictionary or an annotated edition.

omitted to strangers and formal natures. But the dwelling upon them and exalting them above the moon is not only tedious, but doth diminish the faith and credit of him that speaks. And certainly there is a kind of conveying of effectual and imprinting passages amongst compliments which is of singular use, if a man can hit upon it. Amongst a man's peers a man shall be sure of familiarity; and therefore it is good a little to keep state. Amongst a man's inferiors one shall be sure of reverence; and therefore it is good a little to be familiar. He that is too much in any thing, so that he giveth another occasion of satiety, maketh himself cheap. To apply one's self to others is good, so it be with demonstration that a man doth it upon regard, and not upon facility. It is a good precept generally in seconding another yet to add somewhat of one's own: as, if you will grant his opinion, let it be with some distinction; if you will follow his motion, let it be with condition; if you allow his counsel, let it be with alleging further reason. Men had need beware how they be too perfect in compliments; for be they never so sufficient otherwise, their enviers will be sure to give them that attribute, to the disadvantage of their greater virtues. It is loss also in business to be too full of respects, or to be curious in observing times and opportunities. Solomon saith, *He that considereth the wind shall not sow, and he that looketh to the cloud shall not reap.* A wise man will make more opportunities than he finds. Men's behaviour should be like their apparel, not too strait or point device, but free for exercise or motion.

This is clearly systematic; but where are the paragraphs? The answer is in the habit of Bacon's mind. He was content to formulate in concise, suggestive summary. He had none of the public speaker's wish to develop an idea fully. He has very little amplification. Thus for the average man his essays make too hard reading. In formulating an idea concisely he has never been surpassed, and very rarely equaled; but in expanding an idea—that he leaves to the reader. Thus Bacon's readers are limited to the intellectual. Thus his paragraphs are undeveloped. Instead

of a full paragraph, he gives a few sentences, sometimes only one. In the essay above, the first undeveloped paragraph ends *to have good forms*. Point out the ends of other undeveloped paragraphs. For somewhat fuller paragraph development see the essays on *Simulation and Dissimulation*, *Envy*, and *Friendship*. Bacon, then, wrote in the strictly expository type of essay; but did not usually develop his paragraphs.

Looser Essay, the Spectator Type. — In marked contrast to this is a form of essay developed in the eighteenth century. Steele, Addison, Swift, and their friends addressed their essays, not to the intellectual few, but to the larger public; and while Swift commonly used the logical development by paragraphs, Steele and Addison struck out in the *Spectator* a new line. Though their object was to circulate truer ideas of life, they thought that a better way was to awaken and sustain interest. To this end the *Spectator* papers depend largely on description; and for this reason they often have very slight logical progress and rather loose paragraphs. Though longer than most of Bacon's essays, these papers are still short, much shorter usually than the essays of to-day. But they are not short by Bacon's intellectual method of compression; they are short because the thought is not sustained and carried out. Rather the essays are pleasantly suggestive. They may be even fragmentary; for they aimed to keep the character of good conversation. This type of easy, fluent, picturesque comment on life gained enduring popularity. Not only was the *Spectator* imitated by later journals, but outside of regular periodical publications its form of essay was followed long after by Lamb, Irving, Hazlitt, and Lowell, and is still popular to-day.

Stricter Essay, the Edinburgh Review Type. — Early in the nineteenth century the *Edinburgh Review* was founded

for more serious, thorough, and sustained exposition. The idea was to provide systematic criticism of literature, and, through that, of life. Francis Jeffrey, the first editor, had a remarkable faculty of exposition. He loved to think a thing through, stage by stage, to a conclusion. Though his diction is often strong and suggestive, his chief excellence is his grasp of the paragraph. The paragraph became in his hands a clearer and more logical unit of composition than had been at all common in English. This trick of the paragraph was learned through apprenticeship to Jeffrey by the greatest of the *Edinburgh* reviewers, Macaulay. Macaulay's essays are the most familiar examples of the type. They are longer than the *Spectator* essays — often twenty times as long — because their audience and their object are different. They are not only critical; they are systematic and sustained. The books that they review are treated merely as points of departure for an extended, systematic treatment of the subject. The *Edinburgh* reviewers wished their readers to know, not only the worth of a new book, but the worth of its ideas in relation to all the best thought upon the subject. They wished to carry a reader through a definite course of thought to a definite conclusion. He might accept it or reject it; but at least he had been made to think. Thus many of Macaulay's paragraphs have the clearness and emphasis of the paragraphs of a speech. Whether they are argumentative — and they often are — or expository, they carry us through a progress of thought. Not content to throw out ideas or to suggest them by descriptive detail, they discuss ideas fully and progressively. This type of essay was followed later by Cardinal Newman, Matthew Arnold, and so many others of recent times that when we hear the word *essay* to-day we think naturally of an orderly, logical development by paragraphs.

SUMMARY

<i>Spectator Type</i>	<i>Edinburgh Review Type</i>
short, sometimes fragmentary	long, logically sustained
loosely expository	more strictly expository
largely descriptive	descriptive incidentally
paragraphs often loose	paragraphs logical units, or
Addison, Steele, etc., Lamb,	stages
Irving, Hazlitt, Lowell (in	
such pieces as <i>A Good Word</i>	Jeffrey, Macaulay, Newman,
<i>for Winter</i>)	Arnold

Novel, the Web of Life. — The word *novel*, though for some centuries applied loosely and uncertainly, has come to mean in our time a story long enough to unfold an extended series of events and develop character. A novel is a long story in the sense that it is sustained and carried out. Other narrative forms may sketch or hint; but the novel works out in a whole series of situations. Hawthorne's *Ambitious Guest* is limited to a single situation. How the guest became ambitious is left out. In one scene of one evening the disturbing influence of his ambition, and its utter futility, are suggested sufficiently. This is the method of the modern short story. But in the *Scarlet Letter* Hawthorne works out the consequences fully, shows its effect upon character step by step, till we feel something of the accumulated and progressive force of a long series of real experiences. This is the method of the modern novel. For a novel is a long story in this sense also, that it is large and full. It is worked out, not only at length, but in detail. It reminds us of the fullness and complexity of life. To read a good novel is to see life through keener eyes; it is to realize life through fuller presentation of its significance than is possible in any other form of story. That is why we always demand of a novel that it shall be true to life.

Hawthorne wrote beneath the title of his *Ethan Brand* "a chapter from an abortive romance." If the story had been worked out into a novel, would this have been the last chapter? Suggest the contents of two or three preceding chapters. Do you think the story would have gained by being thus worked out at length?

How many persons in Dickens's *Chimes* or *Cricket on the Hearth*? How many in *A Tale of Two Cities*, or of any other of his novels that you know better? Compare as to lapse of time and change of place, and development of character.

The modern novel is full as the old epic was full, by dwelling on the details of actual life (see page 402 above). These the medieval romances tended to pass over, giving a hero's whole history, perhaps, from the cradle to the grave, giving his fights and his victories, but not giving much sense of the people and things about him. In the romances life is all fighting and loving. We pass from dream to dream of surpassing strength and bravery, loveliness and constancy, without ever setting foot on the ground of ordinary real things. But the modern novel, seeking to give us the illusion of actual life, abounds in the concrete (see page 329). As he carries forward the course of action, the novelist suggests the significant details of the life and surroundings of his characters. He tells us that George lounged on the leather sofa at the club, that Henry's three years of prison were written in his walk and carriage, that Mabel was cool at the wheel of the motor-car, just what sensations in the tunnel under the river made Tom break down, just how New Yorkers rushing home to Brooklyn look and sound and feel in the crowd at six o'clock. For the novelist tries to make us in imagination live life more intensely.

Selecting one of the principal characters in a famous novel, write down from memory a summary of the kind of life by which this character is surrounded; *i.e.*, the environment of things and persons. Then try to recall some of the significant concrete details

that gave you this conception. Then choose for reading aloud a brief passage in which such details are especially abundant. For instance, when you think of David Copperfield as a little boy at home after the arrival of his stepfather, what impression have you of the people and things around him? Sum this up; then try to recall definite concrete details making pictures in memory; then find a characteristic passage in which your conception is conspicuous.

Thus living in imagination with the persons of the story, we are brought to sympathize with their actions and to understand their characters. A novel gives us time to become familiar with its persons. Do we not feel ourselves as well acquainted with certain imaginary persons in novels as with the actual persons of our daily experience? Do we not, indeed, sometimes know the imaginary persons better than the real ones by seeing more clearly their motives and characters? For the novelist, though he gives us a sense of the fullness of real life, gives us none of its confusion. Real life is often a tangle of events, a criss-cross of motives. The novelist has so selected and interpreted that we get from the events of his story, and from the behavior of his characters, a sense of order, of cause and effect. Much of our pleasure in a novel comes from feeling events move on to a definite issue, and character develop through the action of human will on circumstances to fuller and more distinct manhood and womanhood. Thus in the best novels character is not merely depicted; it is developed.

Show the effect of adversity in developing the character of Rebecca in *Ivanhoe*. Is the character of the Templar developed or depicted as constant from beginning to end? What influences on Silas Marner were strongest in developing his character? What motives explain the sacrifice of Sidney Carton? Let these questions suggest many others for discussion of characterization in novels.² See also pages 334-340.

This full, consecutive form of the novel was not reached at once. Defoe's *Robinson Crusoe*, which is one of its early forms, has the epic concreteness of detail, but makes no attempt either to develop character or to sustain and heighten interest in plot. Richardson's novels, though they express fine shades of character by letters, are so lacking in everything else to sustain interest that they have almost ceased to be read. Smollett not only caught the trick of characterizing persons by word and act, but, using such events as had been used by Defoe, arranged them for the excitement of suspense. Often less distinct than Defoe in detail, he is livelier in method. Meantime the example of the *Speculator* studies in character and manners was gradually leading novelists to nicer characterization and fuller description of environment. Sir Roger de Coverley, whom we realize more clearly and sympathetically than any character in any English novel before Fielding, showed the novelists how to enhance the impression of a personality by putting him in an environment of appropriate manners, how to make a man stand out in his proper neighborhood. Sterne worked out to perfection the art of using narrative form for description. His pictures of eighteenth-century life are not, indeed, brought into any consecutive story; but each in itself has a brilliant distinctness. The writer who combined these arts, who brought the novel to its modern form, is Fielding. Some experience as a dramatist taught him how to bring people together in action and interaction of character. Besides the interest of concreteness, the interest of suspense, and the interest of description, he achieved the interest of complication, the crossing of characters and motives, the struggle that we feel beneath the surface of life. In his hands the novel became, and at its best it has ever since remained, a web of life.

Show how the story of the Cass brothers affects the story of Silas Marner. In what way principally are the two stories connected? How is Silas made the main character (page 354)?

David Copperfield comprises, besides the account of David's own career, the story of Steerforth and Emily, of Rosa Dartle, of Traddles, of Agnes Wickfield, — and what others? Are there so many narrative threads as to produce confusion? Which is the main thread, or clue; and which of the others are woven with it most closely? Compare the book as to the number of threads and the closeness of the weaving with *A Tale of Two Cities*; as to number of characters, with *Silas Marner*. Analyze, with similar comparisons, *The House of the Seven Gables*. Substitute for these books any other famous novels with which you are more familiar; and eventually put your result into an essay developing consecutively the idea How a Novel Suggests the Fulness of Life by Combining Several Stories in One. Contrast the mere collection of stories, as in the *Sketch Book*, and the insertion of stories incidentally, as the story of Peter in *Cranford*.

As a help in analyzing a long or complicated novel, a chart showing when the characters appear may be drawn up by writing the name of each character at the head of a column, the chapter numbers at the left end of the horizontal lines, and a hint of the action and place at the right end, thus:

Chap.	Mrs. Copperfild	David	Steerforth	Peggotty	Betsy Trotwood	etc.	Scene
I.							Blunderstone
II.							etc.
III.							
IV.							
etc.							

By drawing a vertical line under each character opposite each chapter in which he appears in action a comprehensive view,

inexact, but graphic, will be given of how much space a character has, whether his part in the story is continuous or interrupted, and with what other characters he is most often grouped. To make such a chart still more suggestive, draw a red line across the sheet under the chapter of climax (page 355) and under each previous chapter that narrates an especially important situation, or crisis. A chart of *Vanity Fair*, for instance, would underline as the climax the chapter in which Rawdon Crawley throws the jewels into the face of the Marquis of Steyne, and, as the first important crisis, Becky's refusal of Sir Pitt. Again, such a chart shows a story like *Cranford* to be, hardly a novel, but rather a series of loosely connected sketches, something like the Coverley papers in the *Spectator*.

Short Story, a Crisis of Life. — The difference between the short story and the novel has been already defined as a difference in fullness and consecutiveness. A novel develops action and character fully at length; a short story, taking action and character as already developed, presents them strikingly at some crisis. One brief, uninterrupted period is so carefully chosen and so filled with significant incidents and characteristic words and actions that we receive a single strong impression (pages 342-354). The modern short story is not merely brief; it is single. Everything that might hinder the single impression is omitted (page 345). The short story has its own fullness. It is full, not by carrying us through a series of situations, but by enhancing with abundance of significant detail the force of a single situation. It is *multum in parvo*.

In this respect the short story differs, not only from the novel, but from the tale. A tale is a simple summary of events. It may — it often does — cover as many years and as many characters as a novel. It simply covers them less fully. It covers the long series by touching each event lightly and passing rapidly to the next. A summary of a

novel, reducing each chapter to a half-dozen sentences, would have the same form as a tale. Now this form is quite different from the form of a short story. For the short story differs from novel and tale alike in confining itself to a single critical event or situation. Like the tale in length, it is unlike in form. Instead of covering a series of situations, it is focused on one.¹

The story of Isaac and Rebekah (Genesis xxiv) is in form a tale; the story of the death of Absalom (2 Samuel xviii) is in form a modern short story. Compare the two as to method, using the headings of Chapter viii. If the former were told in the way of the latter, at what point would it begin? What might be omitted without loss of vividness? The object of the comparison is, not to prove one superior to the other — each is excellent of its own kind — but to show in what consists the difference of method. Prepare the comparison as a connected oral recitation. Write it out afterward as an essay.²

The following are told in the way typical of the modern short story. Examining two of them according to the discussion above and the headings of Chapter viii, prepare a consecutive oral report on each. Work up one report into a written essay.

Hawthorne's	<i>The Ambitious Guest</i>	Poe's	<i>The Fall of the House of Usher</i>
	<i>The Wives of the Dead</i>		<i>The Cask of Amontillado.</i>
	<i>The White Old Maid</i>		<i>The Masque of the Red Death</i>
		Kipling's	<i>Little Tobrah</i>
Bret Harte's	<i>The Outcasts of Poker Flat</i>		<i>The Maltese Cat</i>

¹ For full definition and discussion of the short-story form see *The Philosophy of the Short-Story* by Brander Matthews, the standard book on the subject; and the present author's introduction to *American Short Stories*, which discusses the development of the form.

² The comparison is worked out in the third chapter of the present author's *How to Write, a Handbook Based on the English Bible*.

Which of the *Twice Told Tales* follow the method of the modern short story, and which the method of the tale? Make a list of each and select one of each for comparison.

Show which method is usually followed by Irving in the *Sketch Book*.

Show that the *Ancient Mariner* begins in the way typical of the short story.

Plan a modern short story from one of the summaries below as follows:

(1) How many persons will you bring into your story? Omit any that you will not clearly need, and summarize briefly the character of each one that you choose. These summaries are not to be inserted in the story. They are merely to help you see the people before you attempt to make others see them. From whose point of view shall the story be told?

(2) What shall be the single scene of action?

(3) To what single, short period of time will you limit the action? Make this as brief as possible.

(4) What shall the characters be saying and doing at the close?

Having planned the story thus, write the first hundred words, taking as your model one of the best short stories that you have recently read in a good magazine.

(a) An old Welsh knight inherited a considerable treasure. Having been poor, he had no house strong enough to guard it; and, in spite of his precautions, word of it came to the ears of an outlaw in the neighboring forest. After studying the approaches to the knight's lonely manor-house, the outlaws arranged to break in. Meantime a strong knight in disguise, seeking adventures, having overheard part of their plan, knocked at the old knight's door to ask food and shelter. Hospitality prevailing over anxiety, he was welcomed, made known his suspicions, and with his host planned to foil the outlaws. A peasant, seeing him enter, told one of the outlaws, who advised postponing the attack till the guest should have departed, lest by violating hospitality they should get ill luck. The chief persisting, they made a rush on the appointed night, and were repulsed with loss, the guest keeping the front door with his sword, and the outlaw chief having his leg

broken by the beam of a trap as he attempted to force the back door.

(b) The story of Paul Revere.

(c) The story of Peter in *Cranford*.

(d) A freight train on a single-track branch railroad breaking in two at the top of a long, steep grade, the last six cars ran away down the mountain. The operator in the first station they passed telegraphed to the tower-man at the junction with the main line. The tower-man shouted the news to the engineer of a freight engine standing just below on the branch line, adding that the local passenger train on the main line, having just passed the block, could not be warned in time. The engineer, instantly uncoupling his tender, and dismissing his fireman, started up the steep grade of the branch line to intercept the runaway. Making all speed possible to his slow engine until he saw the runaway approaching, he stopped and ran back to lessen the impact. The shock almost threw his engine from the track, but not quite. Immediately reversing, he fought the six cars all the way down hill, and finally brought them to a stand on the level just as the passenger train approached. The engineer of the passenger train, grasping what had happened, stopped, and the train crew thanked their deliverer, who was trembling from the reaction. The tower man telegraphed the news to headquarters. The brave engineer went on with his day's work. In a few days the company rewarded him.

(e) King Richard Lion-heart, on his return from Palestine wrecked off the coast of Dalmatia, fell into the hands of Leopold of Austria, whom he had mortally offended in the Holy Land. Henry II bought him from Leopold, and kept him prisoner in the castle of Trifels.

Blondel, the minstrel, his favorite, went in quest of him from castle to castle all over Europe. At last, on some vague surmise, stopping at the foot of the fortress rock of Trifels, Blondel began to sing a lay that they two had composed together. From within a voice finished the couplet. Richard was found. Not long afterward he was ransomed. (From Henry, *Cours Pratique et Raisonné de Style*, page 358.)

(f) The crew of the steamer *Adelaide* vainly fought fire in the hold. At length they were forced to take to the boats. After days of hardship one boat-load, entirely separated from the others, sighted a steamer, succeeded in attracting attention, and was carried to San Francisco.

(g) A young couple — the husband an artist, the wife a musician — being in sore need of money, each unknown to the other goes to work at manual labor. Mutual discovery arises from the fact that both find employment with the same business house.

Make in one sentence a logical definition¹ of each of the following: *epic, romance, drama, lyric, essay, novel, short story*.

In what form has De Quincey composed the story of Joan of Arc? How might this story be composed (1) as a drama? (2) as a novel? (3) as a short story? Consider in each case what persons are necessary, what is the most marked trait and motive of each, and by what actions these would be shown most strikingly; what place or places would make the best scene or scenes of action; what crisis or crises would give the best opportunity for revealing the characters and motives in decisive action. For a drama make a synopsis of scenes, grouping them in three acts; for a novel, a synopsis of chapters. Change the scene, or place of action, only when you can show the change to be necessary or advantageous. Aim to have as much of the action as you can in one spot.

Plan in the same ways one of the following stories: André, Robin Hood, Queen Esther, *The Lady of the Lake*.

¹ Part I., page 102.
